NLM Technical Bulletin Index
No. 201, January 1986 through No. 212, December 1986
Prepared by Harriet Rusin, MEDLARS Management Section, NLM

SUBJECT	DATE	ISSUE-PAGE
Access		
cancel ID code	Feb 86	202-4
health professional applications	Feb 86	202-9
training not required	Jun 86	206-1
UNINET eliminated	Aug 86	208-3
Aliases		
PRT COMP and SUBS DISP	Nov 86	211-3
ANEUPLOIDY subfile of TOXLINE		
description of file	Jul 86	207-12
Animal Experimentation		
new search term in BIOETHICSLINE	Apr 86	204-1
search tips	Apr 86	204-5
Artificial Intelligence		
vs Diagnosis, Computer-Assisted	May 86	205-13
Author Searching		
GRATEFUL MED	May 86	205-11
AVLINE		
(CN) & (CS) change to (UT) or (UA) or (UTS)	Jul 86	207-9
file regeneration	Jul 86	207-9
searching (MH) field	Sep 86	209-16
1986 MeSH use	Jun 86	206-4
	Jul 86	207-10
Backfile Postings		
changed in MESH	Nov 86	211-4
Backfiles		
dates of coverage, 1987	Oct 86	210-7
MED83 will cover 1983-1984	Nov 86	211-3
Billing		
Include access code with NTIS payments	Sep 86	209-3
Interest on overdue accounts, April 87	Oct 86	210-9
NTIS policy	Nov 86	211-11
SDI program	Nov 86	211-3
2 SDI charges on Dec 86 invoice	Oct 86	210-8
BIOETHICSLINE		
coverage expanded to policy issues in the use of animals	Apr 86	204-1
MeSH, 1986 use	Feb 86	202-3
new search term - Animal Experimentation	Apr 86	204-1
toll-free phone number for help	Apr 86	204-6
1986 Thesaurus available	Oct 86	210-4
Canada		
GRATEFUL MED available	Aug 86	208-3
CANCERLIT		
MeSH, 1986 use	Feb 86	202-3
SDI's reviewed for 87 vocabulary changes	Oct 86	210-6
1987 file available Dec. 15, 86	Oct 86	210-6
CANCERPROJ		
Unique Identifier (UI) field, format change	Jan 86	201-3

updates suspended	Aug 86	208-4
1986 MeSH available	May 86	205-3
CATLINE		
(CN) & (CS) change to (UT) or (UA) (UTS)	Jul 86	207-9
file regeneration	Jul 86	207-9
Item Type (IT) values	Jul 86	207-9
searching (MH) field	Sep 86	209-16
Shelving Locations (SL)	Jul 86	207-9
1986 MeSH use	Jun 86	206-4
	Jul 86	207-10
CCRIS		
additional file to TOXNET	Jan 86	201-6
fact sheet	Mar 86	203-enclosure
file description	Mar 86	203-5
pricing information	Apr 86	204-Appendix A
Charges		
see pricing		
Chemical Carcinogenesis Research Information System		
see CCRIS		
CHEMLINE		
Classification Code (CC) field	Jul 86	207-1
price increase	Apr 86	204-Appendix A
regeneration	Jun 86	206-4
	Jul 86	207-1
User Guide revised and available	Jan 86	201-3
Citing a Database	Mar 86	203-11
Classification Code (CC) field added to CHEMLINE	Jul 86	207-1
CLINPROT		
Index Term Listing		
April 1986 available	Apr 86	204-4
June 1986 available	Jul 86	207-3
September 1986 available	Oct 86	210-4
(CN) & (CS) change to (UT) or (UA) or (UTS) in AVLINE and CATLINE	Jul 86	207-9
Commands		
COMMENT	Dec 86	212-3
RENAME	Mar 86	203-12
STOP Y	Mar 86	203-3
COMMENT Command	Dec 86	212-3
Computer		
changing to IBM 3084 Q64	Feb 86	202-3
	Oct 86	210-9
downtime Dec 13 & 14, 1986	Nov 86	211-3
Credit for new access codes extended to 2 months	Jun 86	206-8
Cumulated Index Medicus		
1985 available	Mar 86	203-4
1985 same color as 1984 edition	May 86	205-3
DATE OF ENTRY (DA) Field		
<u>INDEX MEDICUS</u> ranges	Jan 86	201-Appendix A

Demonstration Codes		
MMS now giving PDQ Demo Codes	Dec 86	212-4
PDQ available from NCI	Jan 86	201-3
DIRLINE		
abolishment of National Referral Center	Apr 86	204-7
changes due to Oct 86 update	Nov 86	211-6
Drug Abuse Communications Network (DRACON)		
subfile available	Oct 86	210-3
Fact Sheet available	Jul 86	207-3
file information	Apr 86	204-7
geographic searching	Jun 86	206-9
National Health Information Clearinghouse		
changed name to ODPHP Health Information Center	Aug 86	208-4
OHIC records missing	Nov 86	211-4
Poison Control Centers (PCC) subfile	Aug 86	208-4
	Sep 86	209-12
print format change	Sep 86	209-4
Self-Instructional Guide available	Jul 86	207-3
DOCLINE		
Service Desk phone number	Mar 86	203-3
User Meeting at MLA, 1986	Apr 86	204-4
Errors in Publications	Dec 86	212-19
Fact Sheets		
CCRIS	Mar 86	203-4
DIRLINE	Jul 86	207-3
HSDB	Mar 86	203-4
TOXNET System	Mar 86	203-4
File Regeneration		
AVLINE	Jul 86	207-9
CATLINE	Jul 86	207-9
CHEMLINE	Jun 86	206-4
	Jul 86	207-1
NAF	Jul 86	207-9
GPO		
RTECS hardcopy 1983-84 Cumulative Supplement available	Aug 86	208-5
GRATEFUL MED		
accessing PDQ	Sep 86	209-10
author searching	May 86	205-11
available in Canada	Aug 86	208-3
copy downloaded material	Aug 86	208-14
damaged disk	Apr 86	204-17
discount from NTIS for large orders	Apr 86	204-17
Hospital Satellite Network broadcast to various VA locations	Nov 86	211-17
introduction	Feb 86	202-1
journal searching	Dec 86	212-16
NTIS availability	Mar 86	203-1
pagewidth affects functioning	Apr 86	204-17
procedure for accessing the INFORM file	Nov 86	211-16
Self-Instructional Guide	Oct 86	210-14
SETUP explained	Jun 86	206-10
telecommunications	Oct 86	210-14

2400 baud modem use	Jul 86	207-13
Hazardous Substances Data Bank File in TOXNET see HSDB		
Head and Neck Neoplasms, searching	Jul 86	207-14

Recent TOXNET Search Enhancements

Philip Wexler
Specialized Information Services

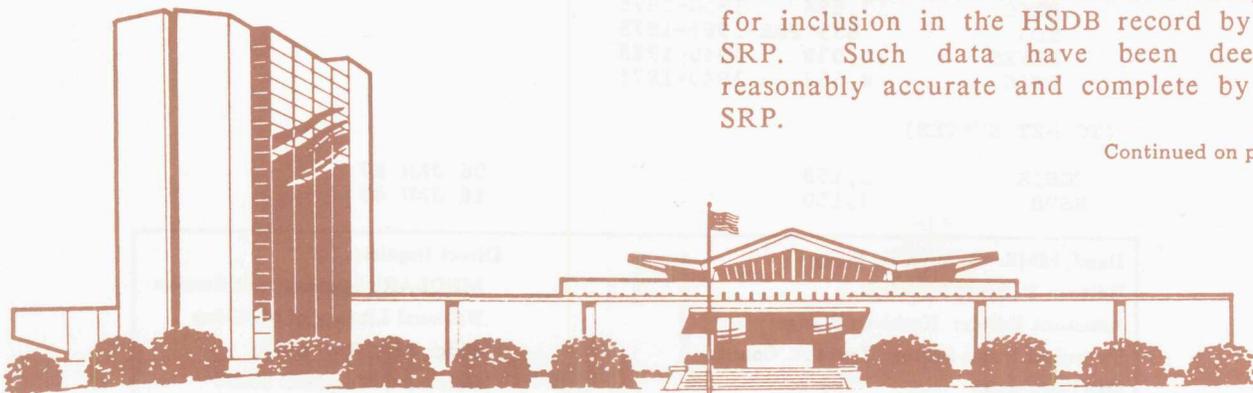

Heraclitus might have said you cannot step into the same TOXNET system twice. Once again improvements in TOXNET software are making the search system's river more navigable for experienced and novice searchers alike.

HSDB Review Status Tags

The Scientific Review Panel (SRP) provides the peer review function for HSDB records. Data statements in HSDB now carry tags defining the status of the data as determined by the SRP. These tags automatically display when a PRINT command is issued. The tags are:

ACCEPTED -- Indicates that the data statement has been reviewed and accepted for inclusion in the HSDB record by the SRP. Such data have been deemed reasonably accurate and complete by the SRP.

Technical Notes

Whenever applicable, the heading of each Technical Note includes a reference to the section of the Online Services Reference Manual 1986 that is considered most relevant to the item being discussed, e.g., (Manual 4.7.2). Users should keep in mind that the item may pertain to other sections of the Manual as well.

GEORGE WASHINGTON'S BIRTHDAY HOLIDAY SCHEDULE

The NLM computer will be up on a guaranteed basis Monday, February 16, 1987, the day of the Federal government's observance of George Washington's Birthday. Non-prime rates will be in effect all day and the MEDLARS Management Service Desk will not be staffed. On Washington's Birthday, Sunday, February 22, 1987, it is expected that the NLM computer will be up all day on the regular Sunday non-guaranteed schedule and at non-prime rates. DOCLINE will be up, but non-guaranteed. The DOCLINE Service Desk will not be staffed, but messages may be left on the answering machine. The TOXNET computer system status is always guaranteed with non-prime rates in effect on all holidays. Please see the October 1986 *NLM Technical Bulletin*, Appendix C, for the complete 1987 holiday schedule.

CHEMLINE/TOXLINE PRICE CHANGES

Reminder: Effective January 1, 1987, the charges for CHEMLINE and TOXLINE have changed due to royalty price increases by subfile suppliers. A letter notifying users and explaining these changes was included with the December 1986 *NLM Technical Bulletin*. The approximate average hourly rate for CHEMLINE is \$86 prime/\$79 non-prime and for TOXLINE, \$109 prime/\$102 non-prime. A searcher's actual hourly rate will vary based on total resources used, and,

especially, citations (including characters) printed online. The components of the NLM Online Pricing Algorithm which are affected by these royalty changes are the connect time, citation, and offline page charges. A discount for estimated browsing is no longer included in the citation charge. Use the PRINT BROWSE command to print titles (TOXLINE and its Backfiles) or systematic chemical names (N1) (CHEMLINE) online without incurring a citation charge. TOXLINE Automatic SDI searches are now \$4.00 per search (includes \$3.00 royalty charge). The full domestic and foreign pricing schedule is included with this issue of the *NLM Technical Bulletin* as Appendix A.

The online SHOW COST command display was changed on January 11, 1987 to reflect the new rates. The EXPLAIN CHARGES command display stills reflects the 1986 rates. An announcement of the updating of this command to reflect the new rates will be made in the online NEWS and the *NLM Technical Bulletin*.

NEW TOXLINE SUBFILE (Manual 12.5, 12.1)

The Epidemiology Information System file, built and maintained by the Center for Food Safety of the Food and Drug Administration, and formerly available on the DOE/RECON system, was added to TOXLINE as a separate subfile with the update on January 17. 8,722 records were included in that update, and approximately 300 additional records are expected quarterly.

The subfile acronym "EIS" appears in the abstract field of records from this subfile (even when no abstract text is available). The file includes citations to literature on the distribution and health effects of food contaminants, especially unavoidable contaminants, including natural toxicants in foods. A full article describing this subfile will be published in an upcoming issue of the *NLM Technical Bulletin*.

CHANGES AVAILABLE IN THE 1987 ELHILL SYSTEM

(Manual 16.4.11; 15+; 6.8.31)

CANCERLIT now has a searchable language tag of FOR (LA). Retrieval may be limited to English-language publications by eliminating the foreign-language citations. (Approximately 22% of the citations in CANCERLIT are non-English). For example, to limit the retrieval in Search Statement 2 to English-language publications, enter the strategy, "2 AND NOT FOR (LA)".

A new Explain Command is available. The command EXPLAIN PDQ produces a description of the PDQ database.

The Note (NO) field for supplementary chemical records in the MESH VOCABULARY FILE is now Text Word searchable. In the chemical term unit record, the Note data element consists of narrative information about the chemical.

NEW DATA FORM ABBREVIATIONS

(Manual 6.3.4, 6.9.1)

Two MeSH headings which are new for 1987 have Data Form abbreviations (DF) available that were not established in time for printing in either the *Medical Subject Headings - Annotated Alphabetic List, 1987* or the *NLM Online Services Update, 1987*. (Data Form abbreviations are short forms of headings which may be used instead of the longer, spelled out term when searching.)

AGED 80 is the DF abbreviation for AGED, 80 AND OVER. NSAID is the DF abbreviation for ANTI-INFLAMMATORY AGENTS, NON-STEROIDAL. Please annotate the *Annotated Alphabetic List, 1987* on page 21 for AGED, 80 AND OVER with "DF: AGED 80" and annotate page 54 for ANTI-INFLAMMATORY AGENTS, NON-STEROIDAL with "DF: NSAID".

YEAR-END PROCESSING WORKFLOW: IMPLICATIONS FOR ORDER-OF-PRINTING

The NLM year-end processing workflow was redesigned in 1985 for the 1986 system and was used again this year for the 1987 system. Most of the new workflow is transparent to the online searcher, with one exception. All records that are to be changed in a database during year-end processing are segregated for that processing. Once the changes are made to the citations, they are added back into the database at the top as if they were a large "update". This impacts slightly on the expected reverse chronological order of the file that results in the "last-in, first-out" rule for printing. In general, the citations are still loaded with the older records first and newer records last, but changed records, regardless of age, are now added "on top" once-a-year as a result of year-end processing. Therefore, older records may print before newer records in a file if they have been changed. This situation is true for MEDLINE, its Backfile and HEALTH.

1987 MESH CHEMICAL TOOL

The *Medical Subject Headings--Supplementary Chemical Records, 1987* may now be ordered from the National Technical Information Service (NTIS). (Actual publication is scheduled for February or March.) The publication number is PB87-133229/GBB. The prices of the hardcopy version are \$36.00 in the United States and Canada and \$72.00 elsewhere. Microfiche prices are \$13.50 and \$27.00. There is a \$3.00 (U.S./Canada) shipping and handling charge required for each order (\$4.00 foreign). Please send remittance with orders to:

National Technical Information
Service (NTIS)
5285 Port Royal Road
Springfield, Virginia 22161
(703) 487-4650 (for telephone orders
with deposit account or credit card)

This edition of the chemical tool supersedes the 1986 publication and contains records of approximately 23,000 chemicals which have been mentioned in a significant way in journal articles indexed for MEDLINE since 1970. The publication is intended as an aid to indexers and users of *Index Medicus* and MEDLINE. It is also useful when searching the various cancer databases.

LIST OF SERIALS INDEXED FOR ONLINE USERS, 1987

The *List of Serials Indexed for Online Users, 1987* may now be ordered from the National Technical Information Service (NTIS). Delivery is expected in February. The publication number is PB87-133237/GBB. The U.S./Canadian price is \$16.50 for hardcopy and \$6.50 for microfiche; the foreign price is \$33.00 (hardcopy) and \$13.00 (microfiche). Orders should be sent to the address given in the previous Technical Note. Remittance should accompany all orders. Please include \$3.00 (U.S./Canada) per order to cover postage and handling (\$4.00 foreign).

CUMULATED INDEX MEDICUS

The *1986 Cumulated Index Medicus, Volume 27* is now available for purchase from the U.S. Government Printing Office. Delivery is expected in April. The stock number is S/N 617-052-00264-7; the U.S. price is \$204 (\$255 foreign). Orders should be sent to:

Superintendent of Documents
 U.S. Government Printing Office
 Washington, D.C. 20402
 (202) 783-3238 (for phone orders)

LIST OF JOURNALS INDEXED IN INDEX MEDICUS

The *List of Journals Indexed in Index Medicus, 1987* is now available for purchase

from the U.S. Government Printing Office. The stock number is S/N 717-100-00003-4; the U.S. price is \$10.00 (\$12.50 foreign). Orders should be sent to the address given in the previous Technical Note.

NEW POPLINE THESAURUS
 (Manual 24.4.15, 24.7)

The *POPLINE Thesaurus* has been revised. The new edition, dated Fall 1986, updates and supersedes the Summer 1984 edition. The new edition has been mailed to those institutions that had previously received the 1984 edition. Any organization that has not received the new edition, or any organization or individual that needs a *POPLINE Thesaurus* may request one from the producers at the following address:

Population Information Program
 The Johns Hopkins University
 624 North Broadway
 Baltimore, MD 21205

Please include the organization name and mailing address. A position title in addition to a personal name is also needed.

PRICING SCHEDULE

The complete domestic and foreign pricing schedule for MEDLARS services is included with this issue as Appendix A.

TREE ANNOTATIONS, 1987

No new edition of the *Medical Subject Headings, Tree Annotations* will be published in 1987. Searchers with the 1984 edition of the *Tree Annotations*, which was the last edition published, should consult Appendix B for a list of changes that should be made to this 1984 edition to keep the information current.

MEDLINE DATE OF ENTRY RANGES
(Manual 7.3.7)

A list of the Dates of Entry (DA) ranges for MEDLINE and its Backfiles is attached to this issue as Appendix C.

printing. These pages include parts of sections 4.10.2.1.3, 11.3, and 14.4.18. Copies of these pages are attached at the back of this issue. Users should check their copies of the OSRM and insert these pages if necessary.

MISSING OSRM PAGES

Several pages of the *Online Services Reference Manual, 1986* were inadvertently deleted in

NLM TECHNICAL BULLETIN INDEX

Enclosed with this issue is a copy of the latest index to the *NLM Technical Bulletin*, covering the January 1986 through December 1986 issues.

Please access **FILE INFORM** and type **NEWS** to see the most recent news items online!

CORRECTION TO MeSH ANNOTATION:

The annotation for **LYMPHOMA** in the *Medical Subject Headings -- Annotated Alphabetic List, 1987* is incorrect. The correction given in the list of MeSH Errata published in the November 1986 *NLM Technical Bulletin* is also incorrect. The *correct* annotation is:

"malignant lymphoma" can go here; do not confuse with malignant lymphogranuloma (= HODGKIN'S DISEASE); "non-Hodgkin's lymphoma" = Lymphoma, non-Hodgkin's or specific indentions; "Mediterranean lymphoma" = Lymphoma, Mediterranean see IMMUNOPROLIFERATIVE SMALL INTESTINAL DISEASE; "T-cell lymphoma": coord IM with T LYMPHOCYTES (NIM); /anal /blood supply /secret /ultrastruct permitted; coord IM with precoord organ/neopl term (IM)

TOXNET Enhancements

Continued from page 1

UNCONFIRMED -- Indicates that the data statement has been reviewed by the SRP but has been found questionable in some respect. The statement may be in conflict with other data in the record, come from an obscure source, or the source may lack key experimental details. Essentially, there is insufficient information available to either confirm or reject the statement. Nonetheless, the data statement may be of value to users and has, therefore, been retained.

UNREVIEWED -- Indicates that the data statement has not yet been reviewed by the SRP. It will carry this tag until the SRP does review it.

These tags are not searchable but may be selectively displayed as shown in the examples in Figure 1.

There may be cases where users specify a review status in a PRINT command but there are no data statements matching it. If this happens, the message NO DATA FOR THE SPECIFIED OPTION will display.

SAME Command

The SAME command limits false drops by searching for the co-occurrence of specified terms within data statements. It had been restricted to operate on one data field at a time. Some of our users suggested we extend its function to headers and categories. Done. The example in Figure 2 shows the SAME command used in progressively broader searching for chemicals affecting thyroid function.

It is important to be aware that the SAME command always operates *within* individual data statements. What the current enhancement allows is one-step SAME searching of all the data statements within a data field, header or category. Thus, in SS 2 from Figure 2, TOXNET will search for the

co-occurrence of the terms "thyroid" and "function" in data statements from HTOX and NTOX, the two data fields indented under the header TOX.

Also, use of the OR operator is now permitted within the SAME command. The examples in Figure 3 show how this can streamline a search for chemicals that may cause various hypertensive effects in humans.

The order of execution of logical operators in TOXNET is AND, AND NOT, OR. Thus, in example 3, terms are first "ANDed" together, and the resultant combinations are then "ORed".

Truncation Limits Extended

The former truncation limit of 5 has been raised to 10. When a user enters a truncated term, whether or not preceded by ALL, the system scans the index for all entries for which the given term is a root. Previously, if there were more the 5 entries, the system would display a statement to that effect and request that the search be refined. Currently, the system will perform the specified search unless there are more than 10 entries which contain the entered term as a root.

When a truncated term, not preceded by the word ALL is entered, the system displays a list of entries in the index that contain this root. The message following this list now reads SELECT NUMBER(S), ALL OR NONE, giving users the option of selecting one or more of the retrieved entries. Figure 4 shows the truncation principle in practice.

HSDB Expanded Sources

Abbreviated references for virtually every data statement in HSDB have always been provided. Now, though, users have the option of displaying the full bibliographic citation, including page number, for any data statement. This capability is part of the PRT INDENTED print option, as shown in Figure 5.

Other Enhancements

Less recent enhancements not yet reported in these pages include a revised format for NEWS and a SEARCH IN PROGRESS cue.

Upon typing NEWS, TOXNET users are shown a table of contents of all news items. The items are listed in reverse chronological order (most current first), are given sequential numbers, dates, short titles, and seen/unseen status. Users are able to select whichever news items they care to see in full. The last item lists user assistance phone numbers.

The SEARCH IN PROGRESS cue is displayed after a search statement is entered. This cue assures users that TOXNET is processing the search.

Users are still encouraged to use the online COMMENT command to make recommendations or suggestions for TOXNET system improvements. For the high-tech shy, we also welcome communications delivered by covered wagon and carrier pigeon.

Displaying Review Status Tags

Example 1: PRT DL STATUS ACCEPTED
 (This command will display data statements that have "accepted" tags for all data fields of the retrieved records.)

Example 2: PRT ENEX STATUS ACCEPTED UNCONFIRMED
 (This command will display data statements with "accepted" or "unconfirmed" tags for data fields within the ENEX category of the retrieved records.)

Figure 5

Credit Cards For MEDLARS Online Charges

The National Library of Medicine and the National Technical Information Service (NTIS) are pleased to announce the immediate implementation of credit cards as an option for payment of NLM MEDLARS online services charges. Users who would like to switch from their present method of payment to credit card should call the Accounts Receivable Branch of the National Technical Information Service at (703) 487-4770. Users will need to supply the type of credit card, the credit card number, the expiration date, the card holder's name (and person placing the request if different from card holder) and the MEDLARS User ID code (i.e., XXX01). Only Visa, Master Card, and American Express cards are accepted.

Once credit card billing is authorized, NTIS

will automatically charge the card for MEDLARS services each month. Invoices for MEDLARS service will then begin to show charges to the credit card number. It will be the user's responsibility to notify NTIS before the card expires, with new payment information (new card expiration date, MEDLARS User ID code, etc.). A warning notice that the card is about to expire will be printed on the invoice sent out by NTIS one month prior to the expiration date of the credit card. If NTIS does not receive the updated credit card information by the time the following month's invoices are created, the monthly charges incurred will be converted to a request for direct payment.

In the near future, the NLM Online Billing Agreement will be changed to include the option of credit card billing along with space for the card number, etc. New users will be able to designate credit card payments and include the necessary information on the Billing Agreement forms.

[Editor's Note: Each month the NLM Technical Bulletin features a column of questions/answers concerning GRATEFUL MED. Contributions for this column will be appreciated.]

I tried to limit a subject search on the eye to only those articles which are contained in the journal Experimental Eye Research. Since it was not included in the list of journal title abbreviations found on the HELP screen, I entered the title abbreviation (TA) for this journal found in the List of Serials Indexed for Online Users (LSIOU). The TA that I typed on the JOURNAL ABBREV line was EXP EYE RES. After GRATEFUL MED performed the search in MEDLINE, I received a NO POSTINGS (NP) message. I know that EXP EYE RES is the correct journal title abbreviation (TA) for MEDLINE for this journal. What am I doing incorrectly?

The NLM system interprets the word EXP as the special instruction EXPLODE. Therefore, GRATEFUL MED does not understand that EXP is part of the title abbreviation EXP EYE RES.

The word EXP must be disguised in order for the system to interpret it correctly as a part of a title abbreviation. To do this, type a hash mark (#) in place of the E or the X or the P. For example:

CORRECT WAY:

SUBJECT WORDS: eye
 JOURNAL ABBREV: e#p eye res

GRATEFUL MED will now reformat the search request properly when it searches MEDLINE:

SS 1 /C?
 USER:
 eye (mh) or eye (tw)

PROG:
 SS (1) PSTG (4462)

SS 2 /C?
 USER:
 e#p eye res (ta)

PROG:
 SS (2) PSTG (260)

SS 3 /C?
 USER:
 1 and 2

PROG:
 SS (3) PSTG (57)

INCORRECT WAY:

SUBJECT WORDS: eye
 JOURNAL ABBREV: exp eye res

This search, when reformatted by GRATEFUL MED, will not pick up the Journal Title Abbreviation EXP EYE RES.

GRATEFUL MED users should also note the following articles and/or features in this issue:
 TECHNICAL NOTES, p. 3.

Erratum: In the GRATEFUL MED column for October 1986, the order number for *The Basics of Searching MEDLINE: A Guide for the Health Professional* was listed incorrectly. The correct order number is PB86-232650/GBB. Please refer to the Technical Notes section in this issue for the address of NTIS.

Monthly Search Hint:

Searching For Information On The Concepts Of The Handicapped and Chronic Diseases

Micki McIntyre
Eastern Region Online Training
and Information Center

The terms "handicapped" and "chronic diseases" can be interpreted in many ways. One person's concept of the handicapped or the chronically ill may be quite different from the perceptions of another. The official MeSH scope notes for these terms read as follows:

HANDICAPPED - Those persons with physical disabilities which limit or preclude their participation in certain activities.

CHRONIC DISEASE - A disease which persists over a long period of time.

According to those definitions, many conditions could be considered either a handicap, or a chronic disease, or both. The conditions which fall under these categories range from polio to tennis elbow, and from muscular dystrophy to sunburn.

While it is sometimes difficult to distinguish between handicaps and chronic diseases from the point of view of the requester, it is important to note that the indexers at the National Library of Medicine do make a distinction. There is very little overlap in retrieval between the two headings. A December 1986 search for CHRONIC DISEASE yields 5339 postings; a search for EXP HANDICAPPED yields 668 postings. Only 41 articles (fewer than 1%) were assigned both subject headings.

In order to efficiently search the literature for these two concepts, one should consider the limitations of each:

HANDICAPPED includes general articles about the handicapped as a named group of persons. When the heading is EXPLODED, citations to articles about amputees will also be retrieved, but not citations concerning specific handicapping conditions.

CHRONIC DISEASE is a general term; articles pointedly discussing the chronicity of a disease will be retrieved. No specific chronic diseases are indented under this term, so explosions are not possible, and articles on specific chronic diseases will be retrieved only by searching for that specific disease, and not by searching under this heading.

While general articles are useful in some situations, frequently a requester requires information on specific handicaps or specific chronic diseases. Articles discussing those specific diseases and conditions can be retrieved only by using specific MeSH headings for those individual diseases and conditions. The most useful source of information about the different MeSH headings that might be applicable is the *Medical Subject Headings--Tree Structures*. By browsing the C tree (Diseases) one can locate the various conditions not covered in general articles retrieved by using the handicapped and chronic disease headings. The headings in Figure 1 (with tree numbers) are used to show the wide range of chronic and handicapping conditions that should be considered.

As can be seen, by using several Pre-explosions and Explosions a searcher is able to efficiently retrieve citations concerning specific handicapping or chronic disease conditions which then may be used in a search strategy. In each of these examples, a more extensive search using disease terms yields higher recall than would a search using the general terms only. A word of caution: using all of the disease terms "OR-ed" together may pull a great many "false drops" or unsuitable articles and result in a very large search. It is better to choose several "limbs" of the trees that are pertinent to the topic and test the search with those concepts. By isolating the individual concepts, a searcher is able to broaden a search after browsing the titles, as is shown in the

examples in Figures 2 (A & B) and 3 (A, B & C).

In the first search (Figure 2A), the combination of PROFESSIONAL-FAMILY RELATIONS and CHRONIC DISEASE yielded fourteen citations, all of which seem relevant to the topic. By combining PROFESSIONAL-FAMILY RELATIONS with the Pre-explosion of CENTRAL NERVOUS SYSTEM DISEASES (Figure 2B), twenty-five citations are retrieved and they appear equally relevant. After using the Boolean "AND" to compare the retrieval, only one citation is found to be indexed to both the heading CHRONIC DISEASES and a heading for a specific disease of the central nervous system. Thus, by including more specific terms in addition to the general MeSH term, recall is significantly increased with no apparent loss of precision.

In the second example, the search combining the sexuality terms and the Explosion of HANDICAPPED retrieves ten good citations (Figures 3A & 3B). The second search in this example, which combines the Explosion for CORONARY DISEASE, retrieves nine different citations (Figure 3C). No citations are indexed to both CORONARY DISEASE and HANDICAPPED. In this case, the nine citations are for articles that very specifically mention coronary diseases. When a search is narrowed in this fashion, the precision may increase, while the recall may decrease. Whenever a search is broadened (as in example 1, Figure 2B) there is a risk that the increase in recall will be accompanied by an increase in "false drops". The rise in the number of "false drops" is due to the extended number of headings being utilized in the new search.

Be aware that there may be some unexpected headings located in the disease trees. The following headings would be included in an explosion of the above-listed trees, and would be used for retrieval.

IMMUNOLOGIC DISEASES

DIAPER RASH, POISON IVY
DERMATITIS, ECZEMA

METABOLIC DISEASES

LACTOSE INTOLERANCE

CENTRAL NERVOUS SYSTEM DISEASES

MIGRAINE

NEUROLOGIC MANIFESTATIONS

AMNESIA, TINNITUS, STUTTERING,
INSOMINA, SOMNAMBULISM

MUSCULOSKELETAL DISEASES

FLATFOOT, MUSCLE CRAMP

WOUNDS AND INJURIES

TENNIS ELBOW, SUNBURN, TRENCH
FOOT, MOTION SICKNESS

Searchers and requesters might not consider many of the above conditions as falling under the concepts of chronic diseases or the handicapped. Sufferers of the above conditions would argue that those conditions are long-lasting (chronic diseases) and/or preclude their participation in certain activities (handicapped). Therefore, searching in this area requires a thorough reference interview, including serious questioning of the requester as to the exact conditions to be included as a chronic disease or a handicap. A searcher would then be able to select the appropriate "limbs" of the trees to combine in the search to retrieve articles on specific conditions.

HISTLINE	Online Algorithm	\$1,000/yr minimum	\$1,000/yr minimum	\$1,000/yr minimum
INFORM	Online algorithm excluding the charge for cita- tions and characters; no offline processing	No minimum or flat rate; online algorithm excluding the charge for cita- tions and characters; no offline processing	Not available	Not available

NLM DOMESTIC AND FOREIGN CHARGES EFFECTIVE JANUARY 1, 1987

Database	Online Charges		Leased Tape Charges	
	Domestic 1/	Foreign 2/	Domestic 3/	Foreign 4/
INTROMED	Online algorithm excluding the charge for citations and characters; no offline processing	No minimum or flat rate; online algorithm excluding the charge for citations and characters; no offline processing	\$1,000/yr; No usage charges	\$1,250/yr; No usage charges
INTROTOX	8/Online algorithm for connect time only; no offline processing	9,10/No minimum or flat rate; online algorithm for connect time only; no offline processing	Not available	Not available
MEDLEARN	\$22/hr prime time; \$15/hr non-prime time; no offline processing	11/No minimum; \$25/hr prime time; \$18/hr non-prime time; no offline processing	Not available	Not available
MEDLINE & BACKFILES	Online Algorithm	\$15,000/yr minimum	17/Base file: (1966 up to the current year) \$10,000 /yr minimum 17/Current year: \$5,000/yr minimum	Base file: (1966 up to the current year) \$10,000 /yr minimum Current year: \$5,000/yr minimum
MESH VOCABULARY	Online Algorithm	No minimum; Usage charges only	\$1,000/yr; Free with MEDLINE; No usage charges	\$1,250/yr; Free with MEDLINE; No usage charges
NAME AUTHORITY	Online Algorithm	No minimum; Usage charges only	\$1,000/yr; No usage charges	\$1,250/yr; No usage charges

NLM DOMESTIC AND FOREIGN CHARGES EFFECTIVE JANUARY 1, 1987

Database	Online Charges		Leased Tape Charges	
	Domestic 1/	Foreign 2/	Domestic 3/	Foreign 4/
PDQ	\$22/hr prime time; \$15/hr non-prime time; no offline processing	11/\$1,000/yr minimum; \$25/hr prime time; \$18/hr non-prime time; no offline processing	18/Not available from NLM	18/Not available from NLM
POPLINE	Online Algorithm	\$2,000/yr minimum	\$2,000/yr minimum	\$2,000/yr minimum
RTECS	12/Online Algorithm;	13/\$1,000/yr minimum;	14/\$1,000/yr minimum	15/\$1,000/yr minimum
SDILINE	Online Algorithm	No minimum; Usage charges only	\$5,000/yr minimum (if leased separately from MEDLINE)	\$5,000/yr minimum (if leased separately from MEDLINE)
SERLINE	Online Algorithm	No minimum; Usage charges only	\$1,000/yr; No usage charges	\$1,250/yr; No usage charges
TOXLINE	16/Online Algorithm;	7/\$2,500/yr minimum	7/Current file: (1981 through the current year) \$2,500/yr minimum	7/Current file: (1981 through the current year) \$2,500/yr minimum
			Backfiles: (1965-75 and 1976-80) \$2,500/yr minimum for each back-file	Backfiles: (1965-75 and 1976-80) \$2,500/yr minimum for each back-file

NOTES: In addition to the above rates the following charges apply to each Domestic and Foreign Online Center: \$1 per Offsearch per file; and \$1 per Automatic SDI. Automatic SDI searches on the TOXLINE database are \$4.00 for domestic users (\$1.00 plus \$3.00 royalty).

A Tape License Agreement packet is available upon written request to the Associate Director, Library Operations, National Library of Medicine, Bethesda, MD 20894. For a fee of \$25.00, a sample tape is also available upon written request in advance of signing a license agreement. In addition, NLM offers a Subset Tape Program; see Note 17.

1/ ELHILL online charges for domestic users are calculated by using an algorithm which includes connect hour charges and charges for search statements, citations, interactions (i.e., carriage returns), computer resources (i.e., disk accesses), and characters transmitted to the user's terminal. Unless otherwise noted, the connect hour charge portion of the algorithm is \$7.25/hour prime time and \$4.50/hour non-prime time, and the offline print charge is \$0.18 per page. Details of the entire algorithm follow these notes.

2/ ELHILL online charges for foreign users are calculated by using an algorithm which includes connect hour charges and charges for search statements, citations, interactions (i.e., carriage returns), computer resources (i.e., disk accesses), and characters transmitted to the user's terminal. Each database, except the technical databases (AVLINE, CATLINE, NAME AUTHORITY, and SERLINE), the MESH VOCABULARY file, MEDLEARN and the INFORM and INTROMED databases, has a minimum against which usage is charged. Unless otherwise noted, the connect hour charge portion of the algorithm is \$10.25/hour prime time and \$7.50/hour non-prime time, and the offline print charge is \$0.28 per page. Usage over the minimum will be calculated at the rate of the file being accessed. The dollar equivalent of usage over the minimum on one file will be applied to the minimum for the other file(s). Usage on a technical database, the MESH VOCABULARY file, MEDLEARN, INFORM and INTROMED may not be applied to a minimum on another database. Details of the entire algorithm follow these notes.

3/ ELHILL tape charges for domestic users consist of an annual minimum charge for each database except the technical databases (AVLINE, CATLINE, NAME AUTHORITY, and SERLINE), the MESH VOCABULARY file, MEDLEARN, and INTROMED. Unless otherwise noted, usage charges of \$4.00/connect hour and \$0.01/offline citation are applied to the annual minimum. (The use charge is \$3.00/connect hour between 6:00 p.m. and 6:00 a.m. local time Monday through Friday, and all day Saturday and Sunday. This time period is referred to as tape non-prime time.) Usage over the minimum will be charged the rate of the file being accessed. For institutions or organizations leasing two or more files with a minimum plus usage, the dollar equivalent of usage over the minimum for one file may be applied to the minimum for the other files(s).

An annual flat fee, with no usage charges, will be charged for each of the technical databases (AVLINE, CATLINE, NAME AUTHORITY, and

SERLINE), the MESH VOCABULARY File, and INTROMED. Usage on other leased databases may not be applied to these annual flat rate fees.

Domestic centers providing service to foreign users will be charged at the foreign rate for this portion of their service.

Extra charges are levied for class maintained files or special formats. Prices for files and formats currently available are:

SDILINE GENER FORMAT	\$1,000/year
CLASS-MAINTAINED MEDLINE DATA:	
Complete Database Replacement Copies	\$3,000/year
Changed Records Only	\$1,000/year

Charges for physical tapes and shipping are included in the minimum charges for each database.

4/ Tape charges for foreign users and the portion of foreign use provided by domestic centers consist of an annual minimum charge for each database except the technical databases (AVLINE, CATLINE, NAME AUTHORITY, and SERLINE), the MESH VOCABULARY file, and INTROMED. Unless otherwise noted, usage charges of \$7.00/connect hour and \$0.03/offline citation are applied to the annual minimum. (The use charge is \$6.00/connect hour between 6:00 p.m. and 6:00 a.m. local time Monday through Friday, and all day Saturday and Sunday. This time is referred to as tape non-prime time.) Usage over the minimum will be charged the rate of the file being accessed. For institutions or organizations leasing two or more files with a minimum plus usage, the dollar equivalent of usage over the minimum for one file may be applied to the minimum for the other file(s).

An annual flat fee, with no usage charges, will be charged for each of the technical databases (AVLINE, CATLINE, NAME AUTHORITY, and SERLINE), the MESH VOCABULARY File, and INTROMED. Usage on other leased databases may not be applied to these annual flat-rate fees.

Extra charges are levied for class-maintained files or special formats. Prices for files and formats currently available are:

SDILINE GENER FORMAT	\$1,000/year
CLASS-MAINTAINED MEDLINE DATA:	
Complete Database Replacement Copies	\$3,000/year
Changed Records Only	\$1,000/year

Charges for physical tapes and shipping are included in the minimum charges for each database.

5/ Available in ELHILL or MARC version except for weekly updates of the current-year file which is available only in MARC.

6/ CHEMLINE royalty charges of \$0.25 per citation and \$54.00 per hour of connect time are added to the algorithm. Offline page charges of \$1.46 per page include \$1.28 per page royalty. Royalty charges are subject to change without advance notice.

- 7/ CHEMLINE and TOXLINE royalties are not paid to NLM but are negotiated with and paid to file content providers such as CAS, BIOSIS and ASHP.
- 8/ TOXNET (HSDB, CCRIS & INTROTOX) online charges are calculated for domestic users using an algorithm which includes connect hour charges and charges for search statements, interactions (i.e., carriage returns) and characters created for transmission to the user's terminal (INTROTOX is charged only the connect hour portion.) Unless otherwise noted, the connect hour portion of the algorithm is \$60.25/hour prime time and \$56.50/hour non-prime time, and the offline print charge is \$0.60 per page.
- 9/ TOXNET (HSDB, CCRIS & INTROTOX) online charges are calculated for foreign users by using an algorithm which includes connect hour charges and charges for search statements, interactions (i.e., carriage returns), and characters created for transmission to the user's terminal (INTROTOX is charged only the connect hour portion). A single minimum of \$2,500 will be charged in Fiscal Year 1987 for the HSDB, CCRIS and INTROTOX files. As other files are added to the TOXNET system, individual minimums will be established for each file (e.g., RTECS at \$1,000). Unless otherwise noted, the connect hour portion of the algorithm is \$63.25/hour prime time and \$59.50/hour non-prime time, and the offline print charge is \$0.70 per page. Usage over the minimum charges will be calculated at the rate of the file being accessed. The dollar equivalent of usage over the minimum on each of these files (except INTROTOX; see Note 10) may be applied to the minimum for other MEDLARS databases on either ELHILL or TOXNET.
- 10/ INTROTOX may only be requested if either HAZARDOUS SUBSTANCES DATABANK or CHEMICAL CARCINOGENESIS RESEARCH INFORMATION SYSTEM has been requested. Usage on INTROTOX may not be applied to a minimum on any other MEDLARS database. Online charges for foreign users are \$63.25/hour prime time and \$59.50/hour non-prime time.
- 11/ Usage is charged separately, i.e., usage on this file may not be applied to the aggregate minimum charges.
- 12/ Online algorithm for RTECS for domestic users includes connect charges of \$39.00 per hour non-prime time and \$42.75 per hour prime time; offline prints are \$0.41 per page.
- 13/ Online algorithm for RTECS for foreign users includes connect charges of \$42.00 per hour non-prime time and \$45.75 per hour prime time; offline prints are \$0.51 per page.
- 14/ For domestic RTECS tape users, usage charges of \$22/connect hour and \$0.17/offline citation are applied to the annual minimum. (The use charge is \$21/connect hour during tape non-prime time -- see Note 3.)
- 15/ For foreign RTECS tape users, usage charges of \$25/connect hour and \$0.19/offline citation are applied to the annual minimum. (The use charge is \$24/connect hour during tape non-prime time -- see Note 4.)

- 16/ TOXLINE royalty charges of \$0.15 per citation and \$68.60 per hour of connect time are added to the basic online algorithm. Offline page charges of \$0.66 per page include \$0.48 per page royalty. Royalty charges are subject to change without advance notice.
- 17/ MEDLINE data is also available under the NLM Subset Program. A subset information packet is available upon request from MEDLARS Management Section, National Library of Medicine, Bethesda, MD 20894. Prices are prorated on the amount of data received and a flat rate option is also available to qualified users. The detailed "Charges for Subsets" is included at the end of this pricing schedule.
- 18/ Contact the International Cancer Research Data Bank (ICRDB) at the National Cancer Institute (NCI) for information on leasing PDQ on tape.

Charges For Subsets

Subsets are available on magnetic tape from the MEDLINE database and its Backfiles. All charges include a copy of the MESH Vocabulary File if requested.

"Personal Use" Subsets: There is an annual limit of 150,000 citations.

- I. Individualized Subsets: annual subscription to the current year and Backfiles -- \$1,500/year flat rate. Charges include monthly updates and annual replacement tape(s) for which maintenance and error correction have been performed.
- II. Custom Subsets: one-time retrieval from current year and Backfiles -- \$500 flat rate; no updates provided.

"Individualized Multiple Use" Subsets: Charges include monthly updates and annual replacement tape(s) for which maintenance and error correction have been performed.

- I. Option A: Annual minimum with use charge. (The use charge offsets the annual minimum charge. If the use is a dollar equivalent less than the minimum, the minimum is paid. If the actual use is a dollar equivalent more than the minimum, the dollar equivalent is paid.)
 - A. Current Year Annual Subscription
 1. Annual Minimum Charge is dependent upon the percentage of the current year's MEDLINE data received:

up to 25% file:	\$1,250
26% to 50% file:	2,500
51% to 75% file:	3,750
76% to 100% file:	5,000
 2. Use charges offset annual minimum: \$4 per connect hour during prime time and \$3 per hour during non-prime time (6:00 pm to 6:00 am local time Monday through Friday, and Saturday, Sunday, and holidays) PLUS \$0.01 for each citation printed offline at the host computer.

B. Backfiles Annual Subscription

1. Annual Minimum Charge is dependent upon the percentage of data from 1966 up to the current year received:

up to 25% file:	\$2,500
26% to 50% file:	5,000
51% to 75% file:	7,500
76% to 100% file:	10,000

2. Use charges offset annual minimum: as described for Current Year Annual Subscription

II. Option B: Flat Rate

Under certain circumstances, a flat rate pricing option is available for an institution/organization which does not vend a database service. In order to qualify for the flat rate, the institution/organization must limit access to either academically affiliated institutions or corporate members of the organization which are located within a "reasonable geographic distance" (usually interpreted to be within the confines of the local region's telephone area code). Alternatively, if the institution/organization does not anticipate having sufficient use to warrant paying the flat rate, it may offset the minimum annual charge by \$4 per connect hour with no charges for citations printed offline (as a second option to the annual minimum use charges described in Section I.A.2 above).

A. Current Year Annual Subscription

Charges are not dependent upon the size of the file. There is a \$10,000 annual flat rate which includes one academically affiliated institution. An additional annual charge of \$1,000 is made for each additional academically affiliated institution to which service is provided.

B. Backfiles Annual Subscription

Annual flat rate is dependent upon the size of the subset licensed. For MEDLINE data from 1966 up to the current year:

up to 25% file:	\$2,500
26% to 50% file:	5,000
51% to 75% file:	7,500
76% to 100% file:	10,000

CHARGES EFFECTIVE JANUARY 1, 1987

NLM ONLINE PRICING ALGORITHM CHARGES TO DOMESTIC USERS¹

*Average searcher charges per hour may differ according to computer resources used and citations and characters printed online.

**Includes royalty charges of \$68.60 per connect charge and \$0.15 per citation charge for TOXLINE and its Backfiles (TOX76 and TOX65). Discount for browsing no longer included in Citation Charge.

***Includes royalty charges of \$54.00 per connect charge and \$0.25 per citation charge for CHEMLINE. Discount for browsing no longer included in Citation Charge.

NLM OFFLINE CHARGES TO DOMESTIC USERS¹

	<u>Pages</u>	<u>Per Page</u>
MEDLINE and other databases		\$0.18
TOXLINE, TOXBACK76, TOXBACK65		0.66 (Includes \$0.48 royalty charge per page)
CHEMLINE		1.46 (Includes \$1.28 royalty charge per page)
TOXNET (HSDB or CCRIS)		0.60
RTECS		0.41
	<u>Offsearches</u>	<u>Per File</u>
All databases		\$1.00 (Plus page charges)
	<u>Automatic SDI Searches</u>	<u>Per Search Each Month</u>
SDILINE, HEALTH, CATLINE, CANCERLIT, AVLINE, POPLINE		\$1.00 (Plus page charges)
TOXLINE		4.00 (Plus page charges: includes \$3.00 royalty charge)

Federal, state, and/or local taxes are not included. Terminals and telephone/line charges are the responsibility of the institution or individual accessing MEDLARS. Current prime time is 10:00 am to 5:00 pm Eastern Time, Monday through Friday. All other time is non-prime time.

¹/ Notes on NLM Charges to Foreign Users: In general, foreign users under the online pricing algorithm are charged \$3.00 extra on the connect charge portion and \$0.10 extra per offline page, and are not charged amounts designated as royalties. These royalties are negotiated separately with and paid directly to the database producers and not to NLM by the coordinating online foreign MEDLARS center.

23 Beginning at this page and continuing through 51, make the subheading /ethnology available at the tree top reading

ethnol - EH

23 4. Avoid BACTERIAL INFECTIONS, RICKETTSIA INFECTIONS and MYCOSES (fungal infections) as too general; prefer specifics.

<p>27 ANAPLASIA CELL TRANSFORMATION, NEOPLASTIC COCARCINOGENESIS NEOPLASM INVASIVENESS NEOPLASM METASTASIS LYMPHATIC METASTASIS NEOPLASM RECURRENCE, LOCAL NEOPLASM REGRESSION, SPONTANEOUS</p>	<p>NEOPLASM SEEDING NEOPLASMS, MULTIPLE PRIMARY NEOPLASMS, RADIATION-INDUCED LEUKEMIA, RADIATION-INDUCED NEOPLASMS, UNKNOWN PRIMARY NEOPLASTIC SYNDROMES, HEREDITARY PRECANCEROUS CONDITIONS</p>
--	--

46 (As second paragraph to 5:)

OPPORTUNISTIC INFECTIONS (C1, C2, C3), common in immunosuppression, is available.

48 16. The specialty for WOUNDS AND INJURIES is TRAUMATOLOGY.

76 D23 - Neuroregulators and Autocoid Blockaders

80 (Disregard present reading at 5 and use this:)

5. IMMUNOLOGIC TESTS, a very large treeing including SERODIAGNOSIS and its indentions, can be supplemented by IMMUNOLOGIC TECHNICs and its specifics in E5.

84 8. In addition to IMMUNOLOGIC TECHNICs and its indentions, consider IMMUNOLOGIC TESTS and SERODIAGNOSIS with all their indentions in E1. See also 16 and 17 on the next page. Consider also IMMUNITY and its indentions in G4.

(substitute this for the present 11:)

11. In addition to DRUG ADMINISTRATION ROUTE here, consider also DOSAGE FORMS in D26.

91 At the tree top make the subheading /ethnology available as

ethnol - EH

94 4. Note in addition to all the indentions under NEUROSCIENCES here, there are NEURORADIOGRAPHY (E1) and NEUROSURGERY (E4, G2). All are used as specialties or disciplines or for general articles only. They should not be confused with NERVOUS SYSTEM with corresponding subheadings.

5. Most terms here are IM.

100 6. In addition to ENZYME ACTIVATION and ENZYME STABILITY here, consider ENZYME INDUCTION (G5) and ENZYME REPRESSION (G5).

106 2. Note that RECEPTORS, DRUG and RECEPTORS, ENDOGENOUS SUBSTANCES are also in D12 and G6. As G6 terms they may take the subheading /drug effects. They are usually IM.

112 (substitute this as 13 and renumber downward:)

13. In addition to OILS here, there is a slightly different treeing in D10 under LIPIDS.

116 (add this as the second paragraph after 3:)

AGED, 80 AND OVER, whether IM or NIM, will always carry the Check Tag AGED.

(substitute this for the present second paragraph:)

When viewed as a social sociological, psychological, political, cultural or economic entity, each group here may be IM. INFANT, NEWBORN and AGED, 80 AND OVER are usually IM.

APPENDIX C

DATE OF ENTRY (DA) RANGES FOR INDEX MEDICUS (IM) YEARS

	<u>IM Year</u>	<u>DA Range</u>	<u>Number of citations</u>
(MED66)	1966 -	651113 through 661101	157,495
	1967 -	661123 through 671129	170,702
	1968 -	671212 through 681111	215,171
	1969 -	681117 through 691119	233,598
	1970 -	691126 through 701112	219,995
(MED71)	1971 -	701117 through 711117	214,378
	1972 -	711130 through 721030	231,610
	1973 -	721108 through 731116	217,751
	1974 -	731130 through 741119	223,693
(MED75)	1975 -	741205 through 751108	224,982
	1976 -	751120 through 761103	278,360
(MED77)	1977 -	761104 through 771031	266,305
	1978 -	771101 through 781027	235,094
	1979 -	781118 through 791026	247,281
(MED80)	1980 -	791027 through 801027	257,948
	1981 -	801028 through 811030	274,888
	1982 -	811031 through 821029	277,688
(MED83)	1983 -	821030 through 831028	300,620
	1984 -	831029 through 841026	298,733
(MEDLINE)	1985 -	841027 through 851025	299,313
	1986 -	851026 through 861024	316,427
	1987 -	861025 through	

These DA ranges and citation totals reflect the citations added to the database, i.e., those published in IM, plus all the Special List citations, during the designated IM year. (Note: An IM year starts in about late October for DA values because of the lead time needed for printing the publication.) Any citation added during an IM year with a year of publication (YR) less than what is covered in the current file (MEDLINE) is later moved to the most recent backfile. MED75, MED77, MED80, and MED83 are backfiles that have received citations based on year of publication and, therefore, have citations with Dates of Entry beyond 761103, 791026, 821029, and 831028 respectively.

MED66 and MED71 are backfiles that received citations based only on Date of Entry and not also year of publication and, therefore, should not contain citations with DA values beyond the upper ranges shown here.

If necessary, DA ranges for a file may be determined by neighboring on (DA) values to find the upper and lower limits. The number of citations in each file are reported on page 2 of every NLM Technical Bulletin. For more information about DA ranges, see the April '83 SEARCH HINT.

[This page continues Section 4.10.2.1.3]

qualifier, a NO POSTINGS message will result because there is no MeSH term COW, although the word does appear as a Text Word in several hundred records. These records would be retrieved by entering the qualified term: COW (TW).

3. Subheadings have been applied to a MeSH heading with the SUBS APPLY command, and no MeSH headings with the specified subheadings have been found:

USER:
SUBS APPLY TRENDS
PROG:
SUBHEADINGS ACCEPTED.

SS 3 /C?
USER:
NATIONAL LIBRARY OF MEDICINE (U.S.)
PROG:
NP (NATIONAL LIBRARY OF MEDICINE (U.S.))

4. The searcher has used the SUBS APPLY command and neglected to cancel it before entering additional MeSH headings to which the subheadings cannot be applied:

SS 1 /C?
USER:
SUBS APPLY ADVERSE EFFECTS, TOXICITY, POISONING
PROG:
SUBHEADINGS ACCEPTED.

SS 1 /C?
USER:
DIAZEPAM
PROG:
SS (1) PSTG (122)

SS 2 /C?
USER:
HUMAN
PROG:
NP (HUMAN)

The user receives NO POSTINGS for the checktag HUMAN because the subheadings were not cancelled before the checktag was entered.

If a term which retrieves postings is ANDed in a single search statement with a term for which there are no postings, a NO POSTINGS message will result and no retrieval will be saved:

SS 1 /C?
USER:
LIVER NEOPLASMS AND PATASSIUM
PROG:
NP (PATASSIUM)
*NONE-

(potassium is misspelled)

SS 1 /C?

11.3.31 REGION (RG)

This element is used to search all locations in a region at once to determine whether a title is held in any location in that region without reference to specific resource libraries. The values are two-digit numbers from 01 to 07.

For example, to search for all English language Index Medicus titles not held in Region 3:

```
SS 5/C?  
USER:  
IM (AI) AND ENG (LA) AND NOT 03 (RG)
```

11.3.32 REVISION INDICATOR (RI)

A revision indicator may appear on records added or updated after November 30, 1978; it is directly searchable. The field contains a one-character code which indicates the nature of the update transaction and is directly searchable:

- A - Title added to file
- C - Title ceased publication or has had a title change
- T - Form of the name of the serial was changed because the previous form was incorrect.
- R - Title is one of the 25,000 retrospective records added to SERLINE from CATLINE. (Most of these titles ceased publication before 1950.)

11.3.33 JOURNAL SUBSET (SB) (for Index Medicus titles only)

Journals indexed in Abridged Index Medicus (AIM) contain an A in this field; M will appear in the records of Priority 1 or 2 Index Medicus titles. An X in this field indicates that the journal is one of the core journals for Cancer. The subset tags are directly searchable in SERLINE, MEDLINE, and the Health Planning and Administration file, and also CANCERLIT for the X value.

11.3.34 SERIES TREATMENT CODE (SM)

With the exception of records for numbered congresses without overall series titles and those entries which have a Call Number of Classed Sep, all entries in SERLINE are for Traced, Classed Together series. Series which are not analyzed (i.e., there is no cataloging of separate issues) carry no value in the SM field. On newer records, the treatment or decision on the series is indicated by a single numeric code listed below:

- 3 for Traced, Classed Together, Analyzed
- 4 for Traced, Classed Together, Partially Analyzed
- 5 for Traced, Classed Together, Supplements Analyzed
- 9 for Traced, Classed Together, Selectively Analyzed

This field can be searched directly by entering the number followed by (SM).

[This page continues Section 14.4.18]

(6) NIOSH Manual of Analytical Methods, the volume number and page that contain information on the analysis of the reported compound are referenced.

(TW) NIOSH AND MANUAL

(7) EPA Genetic Toxicology Program; evaluates short term mutagenicity studies.

(TW) GENETIC AND TOXICOLOGY

(8) OSHA Medical Records status; indicates that the substance meets one of the three criteria for being classified as a "toxic substance" for purposes of a proposed OSHA rule for access to medical records.

(TW) OSHA AND MEDICAL

The Status field for the vinyl chloride record is given below.

- ST - NTP FOURTH ANNUAL REPORT ON CARCINOGENS, 1984

NTIS Invoices - A New Look

MEDLARS users have probably noticed that the monthly invoices have a new look. The National Technical Information Service (NTIS), the National Library of Medicine's billing agent, has reformatted its invoice to assist MEDLARS users in identifying account balances and payments. These changes will aid substantially in resolving account discrepancies, if any, prior to implementation of the interest charges on overdue accounts April 1, 1987.

Users are urged to consult with their internal billing departments about these changes. Users are also encouraged to contact the NTIS Accounting Department to resolve any outstanding questions regarding their accounts prior to April 1, 1987. The telephone number is (703) 487-4770.

The March issue of the *NLM Technical Bulletin* will contain a more detailed article on NTIS interest charges.

REMINDER: EFFECTIVE APRIL 1, 1987, INTEREST WILL BE CHARGED ON ANY MEDLARS ACCOUNT OVERDUE BY 30 DAYS.

Technical Notes

Whenever applicable, the heading of each Technical Note includes a reference to the section of the Online Services Reference Manual 1986 that is considered most relevant to the item being discussed, e.g., (Manual 2.9). Users should keep in mind that the item may pertain to other sections of the Manual as well.

BIOETHICSLINE USING 1987 MESH

Effective January 16, 1987, Year-end Processing of BIOETHICSLINE was completed. For MeSH searching in this database, searchers should now use the 1987 MeSH vocabulary.

NEW DIRLINE SEARCH CAPABILITY: NAME WORDS (NW)

A new search capability has been added to DIRLINE. Name Words (NW) can now be used to search for uniterms taken from the Name (NA) field only. The Name (NA) field remains directly searchable and also Text Word (TW) searchable. This change should help to eliminate some of the false drops which occurred previously. Your comments on the usefulness of this new searching technique will be appreciated. The following example illustrates the precision of this new search capability by comparing a Name Word search with a Text Word search.

NEW PDQ PRINT OPTION

For PDQ users who choose to have their output displayed in a "continuous" mode, there is a new PAUSE print/display option for the Protocol, Physician, and Organization files. This new option causes printing to stop at predetermined points so that the user may either continue the display or enter a PDQ command to terminate the display. This will be of assistance to users who start a "long" printout of protocols, for example, then wish to interrupt printing before it is complete.

The default mode for PAUSE is off. It may be toggled ON or OFF by using an option on the print menus for any of the three files. Once toggled ON, PAUSE will remain ON for the duration of the logon session unless toggled OFF. The status of the PAUSE toggle will be displayed on the main menu for each file.

When displaying Physicians or Organizations in short or medium formats or protocols in short format, PAUSE will stop after every five records. For all other print formats, PAUSE will stop after every record. At each PAUSE, a carriage return will cause the next record(s) to be displayed. Entering a valid PDQ command such as BACK will cancel the printing and take the requested action. PAUSE has no effect in browse mode.

TOXNET OFFLINE PRINTS

During January there were problems with offline print commands in TOXNET that

sometimes resulted in records with missing data fields. This has been corrected. However, please contact Ms. Jeanne Goshorn of Specialized Information Services (SIS) at (301) 496-1131 if you suspect that you received incomplete data in your January TOXNET offprints.

CLINPROT INDEX TERM LISTING

The CLINPROT Index Term listing for December 1986 is now available. It may be requested by writing to the MEDLARS Management Section. Please include a self-addressed label with your request. No return postage is necessary.

NLM-PRODUCED VIDEOCASSETTES AVAILABLE

Four videocassettes, designed and produced by the Library are now available on loan. At least one copy is available from each Regional Medical Library (RML) through standard interlibrary loan procedures and several copies are available for loan from the National Library of Medicine. All are in 3/4" format and are not copyrighted. They were produced by NLM's Audiovisual Program Development Branch, Lister Hill National Center for Biomedical Communications.

1. *Communicating for Health.* This videotape is shown daily at NLM to visitors. It briefly reviews the history of NLM, highlights current services and programs, and describes the Regional Medical Library network. It concludes with a look at development efforts in biomedical information transfer under way at the Lister Hill Center. Fifteen minutes. NLM Call Number: Z 675.M4 VC no. 3 1985.

2. *MEDLARS: An Overview.* Covers the development of MEDLARS services since its beginnings in 1964, and includes such topics as the publication of *Index Medicus*, MEDLINE and the other databases and

databanks, the controlled vocabulary (*Medicr' Subject Headings*), indexing, searching, a DOCLINE. It was designed primarily as a nontechnical overview for visitors, but library students and others unfamiliar with MEDLARS products and services should find it informative as well. Nine minutes. NLM Call Number: Z 699.5.M39 VC no. 2 1986.

3. *MEDLARS Indexing.* This videocassette expands on the indexing portion of *MEDLARS: An Overview*, detailing the steps involved in online indexing from receipt of a journal in the Serial Records Section through assignment of MeSH terms, final review, and production of *Index Medicus*. Nine minutes. NLM Call Number: Z 695.9 VC no. 1 1986.

4. *Medicine and the Arts: Two Faces of Humanity.* A colloquium on Medicine and the Arts was held at NLM on April 22, 1986 to celebrate and explore the relationship between the two disciplines. The Colloquium was videotaped on nine videocassettes. Three hundred & sixty minutes. NLM Call Number: WZ 350 VC no. 2 1986.

A videocassette is being prepared that will provide an overview of DOCLINE, NLM's automated interlibrary loan request and referral system. It will illustrate the ease and efficiency of requesting interlibrary loans using DOCLINE, and explain automatic routing and the interrelationship of files in the DOCLINE system. NLM Call Number: Z 713.5.U5 VC no. 1 1986. An announcement will be made in the NLM News and *NLM Technical Bulletin* when this videocassette becomes available.

ERRATA IN TOXNET BRIEF GUIDE

Corrections should be made to the TOXNET Brief Guide (pocket card) dated January 1987 in the section titled "Some Print Commands." The TOXNET Brief Guide was enclosed with the December *NLM Technical Bulletin*.

The definition shown for PRINT DETAILED actually applies to the PRINT INDENTF option. The correct definitions for these two commands are:

PRINT DETAILED - prints all portions of the record which contain data.

PRINT INDENTED - prints full names of data fields (not just mnemonics) preceding data statements, plus full bibliographic references.

The examples of the **PRINT NEW** command are not in the correct format. The [DATE] portion of this command must always immediately follow the word **NEW**. Examples of the correct use of the **PRINT NEW** command are:

- PRT HTOX NEW 070186
- PRT NEW 070186 NTOX
- PRT ENEX NEW T-365

New [DATE] should always be thought of as a single unit.

Additional copies may be requested by writing to the Specialized Information Services (SIS). Please include a self-addressed mailing label. No postage is necessary.

PHONES LIST

Enclosed with this issue of the *NLM Technical Bulletin* is an updated list of telephone numbers which can be used to access the NLM computers.

Please access FILE INFORM and type NEWS to see the most recent news items online!

Epidemiology Subfile in TOXLINE

Jeanne Goshorn
Specialized Information Services, NLM

The Epidemiology Information System (EIS) file, built and maintained by the Center for Food Safety of the Food and Drug Administration (FDA), and formerly available on the now defunct DOE/RECON system, was added to TOXLINE as a separate subfile with the January 1987 update. The file includes citations to literature on the distribution and health effects of food contaminants, especially unavoidable contaminants, including natural toxicants in foods. The file was developed to provide the FDA with a computerized, indexed information system to pertinent literature related to health effects of food contaminants. Citations in the file are predominantly from published literature such as journal articles, reports, books, and conference proceedings. Some unpublished material such as correspondence, dissertations, and manuscripts are also included. Dates of publication of the citations in the file are from 1940 to the present. All of EIS is currently searchable in TOXLINE's front file.

Records in TOXLINE from the EIS subfile can be identified by the abbreviation EPIDEM in the Secondary Source Identifier (SI) field or by the subfile acronym "EIS" which appears in the Abstract (AB) field of records from this subfile (even when no abstract text is available). The actual words appearing at the start of each abstract field are "EIS: Epidemiology Information System." Because of the possibility of false drops from some other use of the term "EIS," limiting of searches to this subfile should be accomplished by using the following search strategy: (TW) EIS AND EPIDEMIOLOGY AND INFORMATION AND SYSTEM. Until future updates occur (quarterly updates are projected), the strategy (TW) EIS AND 8701 (EM) will also limit searches to this subfile. Currently, the file is developed and maintained for FDA by the Toxicology Information Response Center (TIRC) at the Oak Ridge National Laboratory. TIRC was established by NLM's Toxicology Information Program (TIP) in 1972 to provide information services in toxicology and related areas.

Figure 1 contains a sample record from the Epidemiology Information System subfile. Note that standard bibliographic fields are present, as well as descriptive keywords. A CAS Registry Number (RN) field is also included. Chemical names appear as separate entries in the Keywords (KW) field.

TI - TOXIC SUBSTANCE EXPOSURE AND MULTIPLE MYELOMA: A CASE-CONTROL STUDY.
SO - J. NAT. CANCER INST. 1986, 76(6) 987-994
PT - JOURNALS
AB - EIS: Epidemiology Information System BY MEANS OF A POPULATION-BASED, MULTICENTER CASE-CONTROL INVESTIGATION, CERTAIN TOXIC SUBSTANCES WERE EVALUATED AS RISK FACTORS FOR MULTIPLE MYELOMA. INTERVIEWS WERE COMPLETED ON 698 SUBJECTS WITH NEWLY DIAGNOSED MULTIPLE MYELOMA, AND 1,683 CONTROLS WERE SELECTED FROM THE SAME GEOGRAPHIC AREAS AS THOSE OF THE CASES. RESPONDENTS WERE ASKED IF THEY HAD EVER BEEN "HIGHLY EXPOSED" TO ONE OR MORE OF A LIST OF TOXIC SUBSTANCES OR TO OTHER SUBSTANCES NOT ON THE LIST. WITH THE AID OF A TOXICOLOGIST, RESPONSES WERE THEN CATEGORIZED INTO 20 EXPOSURE GROUPS. THOSE WHO REPORTED PAST EXPOSURE TO PESTICIDES HAD AN ESTIMATED RELATIVE RISK OF 2.6 FOR MULTIPLE MYELOMA [95% CONFIDENCE INTERVAL (CI) = 1.5-4.6]. SUBJECTS EXPOSED TO A VARIETY OF COMPOUNDS COMMONLY USED BY PAINTERS HAD AN ESTIMATED RELATIVE RISK OF 1.6 (95% CI = 1.1-2.4). AN INCREASED RISK ALSO WAS FOUND FOR THOSE WHO WERE EXPOSED TO SOURCES OF CARBON MONOXIDE (RELATIVE RISK = 1.8, 95% CI = 1.0-3.2). ASSOCIATIONS OF BORDERLINE STATISTICAL SIGNIFICANCE WERE FOUND FOR METALS AND ORGANICALLY HIGH POLYMERS (PLASTICS AND ELASTOMERS). NO STATISTICALLY SIGNIFICANT ASSOCIATIONS WERE SEEN FOR EXPOSURE TO FERTILIZERS; DYES AND INKS; ALKALIES; ACIDS; OTHER CAUSTIC SUBSTANCES; CHEMICAL ASPHYXIANTS; ALIPHATIC, CHLORINATED, OR AROMATIC HYDROCARBONS; ALDEHYDES AND KETONES; ETHERS; ESTERS; OILS; DUSTS; OR ASBESTOS.

Figure 1

NLM Chemical & Toxicological Files PC Demo Disk

The NLM Chemical & Toxicological Files PC Demo Disk is an interactive, microcomputer demonstration of the CHEMLINE, TOXLINE, RTECS, HSDB, and CCRIS files. It is designed to acquaint the user with the content and search capabilities of these databases. There is a section on each database containing a brief description of the file and several sample searches.

The PC Demo Disk is written in the PILOTplus authoring language and runs on IBM-PC, PC-XT, PC-AT, and fully compatible computers. It requires 256K RAM memory, one disk drive, and DOS 2.0 or higher. It supports most monochrome, color graphics, or enhanced color graphics displays. The PC

Demo Disk and accompanying documentation can be purchased from NTIS (Order number PB87-143327/GBB) for \$15.00. Please include \$3.00 per order to cover postage and handling. The foreign price is \$30.00 with \$4.00 postage and handling fee. The address for NTIS is:

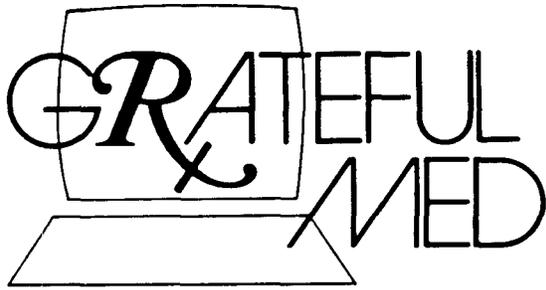

National Technical Information Service
U.S. Department of Commerce
5285 Port Royal Road
Springfield, VA 22161

Phone: (703) 487-4650

Please direct any questions or comments regarding the PC Demo Disk to:

Specialized Information Services Division
National Library of Medicine
8600 Rockville Pike
Bethesda, MD 20894

Phone: (301) 496-1131

[Editor's Note: Each month the NLM Technical Bulletin features a column of questions/answers concerning GRATEFUL MED. Contributions for this column will be appreciated.]

I don't hear GRATEFUL MED dial the NLM computer as some other software packages sometimes do. Is there any way that I can change GRATEFUL MED so that I can hear it dial the telephone number for the computer?

Yes, however it requires editing a program file of GRATEFUL MED called BLOGIN. For the purposes of this column, a text editor program resident in DOS called "EDLIN" is illustrated. However, any text editor or word processing software could be used.

For a one or two floppy disk system:

1. With DOS in Drive A and the GRATEFUL MED working copy in Drive B, type:

EDLIN B:BLOGIN <cr> (carriage return)

For a hard disk system:

1. At the C prompt type:

EDLIN BLOGIN <cr>

2. System responds: End of input file

*

(The * is the user prompt when using EDLIN.)

3. Type: L <cr>

4. System responds with a list of the contents of the file BLOGIN; each line will have a line number.

5. Type: 4 <cr>

6. System responds:

4:AT M0 E1 V1 Q0 F1

4:*

7. Type: AT M1 E1 V1 Q0 F1 <cr>

Note: The only change is in the M value. M1 will turn on the speaker; M0 turns it off. (1 = the number one; 0 = the number 0)

8. System responds: *

9. Type: L <cr>

Check line 4 to be sure the change you made actually took place.

If not, repeat steps 5 through 9.

10. System responds: *

11. Type: E <cr> (carriage return to end)

GRATEFUL MED users should also note the following articles and/or features in this issue:

- NLM Chemical & Toxicological Files
- PC Demo Disk, p. 8

WATCH FOR VERSION 2.0 PREVIEW IN NEXT MONTH'S GRATEFUL MED COLUMN.

Monthly Search Hint:

The Tree Trimmer

Thelma Charen
Senior Technical Adviser
Index Section, NLM

Several years ago I suggested to the Medical Subject Headings Section (MeSH) that they place a symbol in front of a term's tree number which -- for all practical purposes -- gives the broadest use to an indexer or searcher. At the time, in the spirit of the season, I offered to decorate the trees with little balls at the best branch or tree number. The offer was not accepted and the trees were not trimmed.

Now appears an excellent collection of tree branches, neatly pruned for expedient use. This is called aptly *The Tree Trimmer: A Search Tool for Multiple "Tree Explosions" in Medical Subject Headings 1987* and was written by William Clintworth.

In his publication Mr. Clintworth has selected all the MeSH terms which appear in two or more different arrays in different trees or in different parts of the tree. He has displayed portions of the trees, printing a given term with all of its indentions for a pre-searching comparison. His achievement is superior to my suggestion in that MeSH users locating a term with multiple tree numbers do not have to concern themselves with the bothersome multiple digits of a tree: the

instant they see more than one tree number, they can go directly to *The Tree Trimmer* where the term is found directly in the arrays in the same place.

My tree trimming was merely decorative (*Webster's 3d*: to embellish with or as if with ribbons, lace or ornaments: DECORATE, ADORN); Mr. Clintworth's trimming was pruning or as Webster (*loc. cit.*) says, made "trim, neat, regular or less bulky by or as if by cutting, shortening or clipping." *The Tree Trimmer* is all of that.

Because I think *The Tree Trimmer* is an excellent tool, I offer these two suggestions for what I hope will be a second or third or further edition.

First, the author should state in a preface or introduction the purpose of multiple tree numbers and the reason for MeSH's having positioned a given term with all or some of its dependents in two or more branches of the same tree or in two or more different trees. He assumes that all searchers know this: they don't.

In relation to the purpose of multiple treeing, I offer my second suggestion for the 2d edition: Print before the entry in question, the term also under which it is indented (see Figure 1). This will show the searcher the intent of the heading in various contexts.

The Tree Trimmer was published in 1986 by Clintworth Publications, and costs \$35.00. It can be ordered from: Clintworth Publications, 3336 Waverly Drive, Los Angeles, CA 90027 (California residents add sales tax). Orders from outside the U.S., including Canada, will be shipped airmail and charged an additional \$15.00.

LEGUMES	
[PLANTS, EDIBLE]	
LEGUMES	B6.510.570
ALFALFA	B6.510.570.42
PEANUTS	B6.510.570.721
SOYBEANS	B6.510.570.870
[PLANTS, MEDICINAL]	
LEGUMES	B6.560.546
CASSIA	B6.560.546.160
GLYCYRRHIZA	B6.560.546.445
[VEGETABLES]	
LEGUMES	J1.341.956.570
PEANUTS	J1.341.956.570.721
SOYBEANS	J1.341.956.570.870

In this display LEGUMES are viewed from three aspects: as edible plants, as medicinal plants, and as vegetables. The plants indented under them are not identical because their applications in human diet or therapy are not identical.

Figure 1A

ESTROGENS, SYNTHETIC	
[HORMONES, SYNTHETIC]	
ESTROGENS, SYNTHETIC	D6.597.378
CHLOROTRIANISENE	D6.597.378.166
DIENESTROL	D6.597.378.240
DIETHYLSTILBESTROL	D6.597.378.278
EPIMESTROL	D6.597.378.340
ETHINYL ESTRADIOL	D6.597.378.379
HEXESTROL	D6.597.378.501
MESTRANOL	D6.597.378.640
QUINESTROL	D6.597.378.813
ZERANOL	D6.597.378.950
[CONTRACEPTIVES, ORAL, SYNTHETIC]	
ESTROGENS, SYNTHETIC	D7.360.276.210.443.332
ETHINYL ESTRADIOL	D7.360.276.210.443.332.291
MESTRANOL	D7.360.276.210.443.332.535
QUINESTROL	D7.360.276.210.443.332.762

In this display the searcher is apprised of the MeSH coverage of all synthetic estrogens but only the three displayed at the bottom function as oral contraceptives.

Figure 1B

[Editor's Note: The above two figures show the suggested enhancement of adding the broader term which indicates the intent of the heading in various contexts. These broader terms are shown in brackets.]

1987 POPLINE

Kathleen Stenger

Population Information Program of The Johns Hopkins University and MEDLARS Management Section, NLM

It is expected that a regenerated POPLINE file will be available to online users in early March. This March version of the file will reflect some enhancements to the database as well as the changes in the 1987 MeSH vocabulary.

The 1987 POPLINE file enhancements are:

1. The Transliterated/Vernacular Title (TT) field will be Text Word (TW) searchable.
2. The Year (YR) field will exist on all citations and, therefore, become printable for all citations. (Previously, journal-type citations carried the year only as part of the Date of Publication (DP) field.)
3. The Keyword (KW) field will have been validated. New Year-end Processing procedures were implemented this year. Portions of the entire database were rebuilt at the Population Information Program. A

special processing routine was developed a part of this database rebuilding to check all occurrences of the Keyword (KW) field. Each keyword that did not match the 1987 list of POPLINE keywords was examined and either corrected, replaced, or deleted. When the 1987 file comes up in March, there will be greater precision in keyword searching.

An updated *POPLINE Thesaurus* is available and was mailed to those institutions that had previously received the 1984 edition. Any organization that has not received the new edition, or any organization or individual that needs a new thesaurus may request one from the following address:

Population Information Program
624 North Broadway
Baltimore, MD 21205

Please include the organization name and mailing address. A position title in addition to a personal name is also needed.

The 1987 MeSH vocabulary should be in place for searching effective with the 8703 (EM) update. Searchers are advised to review all POPLINE stored strategies for the 1987 vocabulary changes before this update occurs.

Serials Update

INDEXED TITLES UPDATE, FEBRUARY 1987

The following titles cited in MEDLINE, HEALTH, and POPLINE have recently been selected for indexing, undergone a title change, or ceased publication. This list is not cumulative; the information provided is only for titles whose status has changed since the

last UPDATE. More detailed information may be found in SERLINE. For further information, please contact MMS or Ms. Esther Baldinger, (301) 496-1276, Technical Services Division, NLM.

NTIS to Begin Charging Interest on Overdue MEDLARS Accounts

Lois Ann Colaianni
Associate Director for Library Operations, NLM

Walter L. Finch, Director, Office of Product Management, NTIS

SUMMARY

As required by Federal law, on April 1, NTIS will implement an interest charge on any United States MEDLARS account overdue by 60 days or more from the date appearing on the invoice. Federal, state, and local government MEDLARS code holders are exempt from interest charges. Payment is due within 30 days of the invoice date. Interest will be applied when the unpaid balance is overdue 60 days or more. The first interest charges will be displayed on the May invoice and will be for any unpaid balance overdue 60 days or more as of April 1. The interest charge will be determined by the prevailing rate set by the U.S. Department of the Treasury; currently it is 7% per annum.

Technical Notes

Whenever applicable, the heading of each Technical Note includes a reference to the section of the Online Services Reference Manual 1986 that is considered most relevant to the item being discussed, e.g., (Manual 2.9). Users should keep in mind that the item may pertain to other sections of the Manual as well.

NLM ONLINE USER'S MEETING AND ACTIVITIES AT MLA

- The 1987 NLM Online User's Meeting, held as an informal meeting each year at the Medical Library Association (MLA) Annual Meeting, is scheduled for Monday, May 18, 1987, from 7:30 am to 8:30 am. This meeting will be held in the Convention Hall of the Memorial Coliseum.
- A DOCLINE User's Meeting is scheduled for Wednesday, May 20, from 2:00 pm to 3:00 pm in the Convention Hall.
- Version 2.0 of GRATEFUL MED will be demonstrated throughout the MLA meeting at the NLM exhibit booth. Also, DOCLINE and TOXNET demonstrations, as well as demonstrations of other NLM databases, are planned as part of the NLM booth activities throughout the annual meeting.
- Please also note that there will be a "Train the Trainers" course taught by the training staff of the University of California at Los Angeles on Friday, May 22, 1987 following the MLA conference. For registration information, contact Janice Contini at (213) 825-1200.

MEDLARS MINI-MANUAL

The *MEDLARS Mini-Manual* is available for purchase from The British Library. The cost is \$25.00 (including shipping). Order from

BLAISE-LINK, The British Library, 2 Sheraton Street, London W1V 4BH, England. For more complete information on this publication, as well as on BLAISE-LINK, please refer to the article on page 11 of this issue.

2400 BAUD ACCESS TO MEDLARS

Many cities in the U.S. now have 2400 baud TELENET and TYMNET telecommunications numbers available. These numbers can be used to access MEDLARS with 2400 baud modems and are noted in the Phones List by a dollar sign next to the number. The Phones List is sent to MEDLARS users quarterly with this publication, and was last distributed with the February 1987 *NLM Technical Bulletin*.

Searchers in areas with 2400 baud access who are interested in using this faster transmission speed should check to see if their equipment (modems, terminals, computers, printers, buffers) can keep up with 2400 baud data transmissions. Some users have found that their printers could not keep up with the faster speed, especially when the pagelength of their profile was set for a high number of lines, for example, pagelength = 100. Downloaded data can also be lost if a computer's buffer (storage prior to writing to disk or memory) is not large enough to accommodate the amount of data transmitted.

The access procedures for 2400 baud are slightly different from 300 and 1200 baud access. They are explained in Appendix A of this issue. NLM WATS users should contact MMS to request special 2400 baud access numbers and procedures.

DEMONSTRATION CODES POLICY CHANGE

It is no longer necessary to call MEDLARS Management Section after a system/database demonstration to report usage of a

MEDLARS demonstration code. A computer report is now generated regularly showing MMS staff the use of the code for each demonstration.

**NLM MEDLARS PASSWORD SECURITY
(MANUAL 3.7, 4.9.18)**

Searchers are reminded that the password associated with their User ID code is provided for security purposes. No searcher needs to share that password with another person unless that person is known to the searcher and has permission to search with that User ID code. Passwords may be changed easily using the PROFILE MODIFY PASSWORD Command as the following example illustrates; NLM recommends that passwords be changed regularly. Please call MMS if you have questions on how to change your password.

CME CREDITS FOR PDQ SEARCHING

Physicians and physicians' assistants may now receive one hour of continuing medical education (CME) category I credit per hour

of actual online use of PDQ. The CME Course Evaluation Form, which participants must submit every 6 months to claim CME credits, is displayable as an option from the PDQ news menu. The CME credits are currently only available on PDQ accessed through MEDLARS. Please see the PDQ news for further information.

**PDQ SEARCH CONTINUATION OPTION
(MANUAL 15+)**

The search continuation option (option 9) on the Cancer Information Menu has been modified. The continuation options allow the diagnosis selected while searching the Cancer Information File to be carried forward to obtain abstracts of citations in PDQ, CANCERLIT search statements, or Active Protocols. Continuations to the Physician and Organization directories have been deleted. These may still be accessed by typing PHY or ORG at any prompt or by selecting these options from the PDQ main menu. Two new options have been added. Users may now print abstracts for citations selected from the State-of-the-Art information (options 4-7 from the Cancer Information Menu). Currently, over 70% of citations have abstracts. The second new option allows users to display CANCERLIT search strategies for the designated disease. These search formulations are not intended to be comprehensive. The active protocols selection has not changed. Refer to the PDQ online news and the help screen for further information.

TOXNET

IMPROVED

NEIGHBOR

COMMAND

(MANUAL 25.4.6)

The NEIGHBOR ALL (abbreviated NBR ALL) Command is now available in TOXNET. This command may be used to display index terms alphabetically following the word entered, without regard to the data field in which the word appears. The following example from HSDB in TOXNET

shows the difference between the two variations of the NBR command.

SS 1 /C?

USER:

ENTER INDEX NUMBER(S) OR DOWN N

USER:

Also, for any TOXNET NBR command, the Message "Enter Index Number(s) or Down N" is now displayed, giving users the option of selecting one or more of the index terms directly from the list being displayed.

MESH VOCABULARY FILE BACKFILE POSTINGS
(Manual 6.8.24)

Effective March 11, 1987, the MEDLINE Backfile Postings fields for each MeSH heading in the MESH VOCABULARY FILE

were changed to reflect the current number of asterisked and non-asterisked postings in each of the backfiles. These fields are: MED66 (M66), MED71 (M71), MED75 (M75), MED77 (M77), MED80 (M80), and MED83 (M83). Please see the Technical Note in the November 1986 *NLM Technical Bulletin*, p. 4, titled "Backfile Postings in the MESH VOCABULARY FILE", or the *Online Services Reference Manual* for more information.

NEW BIOETHICSLINE MANUAL

A new searcher's manual, *Searching BIOETHICSLINE: A Basic Manual for the Novice Searcher*, was published by the Bioethics Information Retrieval Project at the Kennedy Institute of Ethics, Georgetown University, in November 1986.

The *Manual* provides instructions on how to search BIOETHICSLINE by author or subject and how to limit searches when too much material is retrieved. It also includes a set of exercises followed by suggested search strategies. The manual was designed primarily for health professionals, novice searchers, and experienced MEDLARS searchers who are not familiar with BIOETHICSLINE and the use of Keywords to index and search it.

The *Searching BIOETHICSLINE* manual is available for \$5 from the Kennedy Institute of Ethics, Georgetown University, Washington, DC 20057 (telephone: 202/625-8713 or 800/MED-ETHX). The price includes shipping and handling, except that there is a surcharge of \$2 for orders that are not prepaid. Checks should be made payable to the Kennedy Institute of Ethics.

Please access **FILE INFORM** and type **NEWS** to see the most recent news items online!

NTIS INTEREST

Continued from page 1.

BILLING PROCEDURE IMPROVEMENTS

Since compliance with interest charging regulations was first announced at the 1986 Medical Library Association Annual Meeting, a number of improvements have been made to the billing process and the invoice form. NLM and NTIS made a commitment that before implementation of interest charges, payments would be posted immediately upon receipt and invoices would be mailed promptly. We are pleased to report this has been accomplished. Figure 1 displays the new invoice form that has been in use for two months. It shows the charges for the month, the previous balance, and payments and adjustments to the account. Payments are processed when received and the specific date when a payment was processed now appears on the invoice. (Because invoices normally will be dated on the 15th of each month, payments processed by NTIS up through the first week of the current month are likely to be reflected on the invoice.) The bottom of the invoice form contains an "aging" schedule of amounts that are past due. Beginning with the May 15 invoice for April MEDLARS usage, the interest applied and the rate at which it is computed will be displayed on the form as well.

To assure prompt processing of payments, the top of the invoice form containing the user's invoice number should always be returned with payment. If the top of the invoice cannot be returned, the check or money order should include the user invoice number or User ID code. Payments can be processed and posted much more rapidly by NTIS when the top part of the form is attached.

The detailed billing information for each database that accompanies the invoice has undergone a transformation also. NTIS, using a new laser printer, has reduced the number of sheets necessary to provide the detailed information. Information for as many as twelve databases can be contained on each side of a sheet. This change has enabled NTIS to reduce the time lag between receipt

of billing data from NLM and mailing of invoices to customers. (See Figure 2.)

If a user has an unpaid balance overdue more than 60 days from the invoice date, a separate letter will be mailed by NTIS notifying the customer that interest charges have begun to accrue. A second letter will follow after 91 days from the invoice date unless payment is received or a written explanation has been sent to NTIS providing information on why payment has not been made. If payment has not been made in a reasonable length of time, NLM will consider termination of services. If a user believes the current invoice shows an incorrect overdue balance, NTIS should be contacted immediately. Users are urged to resolve all billing questions, especially those concerned with unpaid balances, before interest charges are implemented.

NTIS CUSTOMER SERVICE

NTIS customer service staff has been augmented to provide more rapid response to questions from MEDLARS users. If assistance is needed, please call NTIS Accounting at (703) 487-4770 and ask for the designated accounting representative as follows:

First Letter of User ID Code	NITS Contact
A - E	Judy Walker
F - M	Cynthia Beard
N - Z	Virginia Birchett

Denise Haynes, NTIS Credit Manager, also can be reached at this number.

Searchers should inform their library staff and disbursement offices of these interest payment details. NLM depends on its users to keep these individuals fully informed. We hope that the implementation of interest charges will proceed in an uncomplicated manner. In an effort to keep users informed, the *NLM Technical Bulletin* will cover the most frequently posed questions about billing.

INTEREST POLICY - EXAMPLE

To illustrate how the interest policy will work, consider the following table that simulates current and aged past-due amounts from the new invoice:

- As of April 15, the customer owes a total of \$500.00, of which \$400.00 is past due and \$100.00 is from current charges. No interest is charged on past due amounts.

- On the May 15 invoice, the \$200.00 payment received on 4/24/87 has been applied, crediting the most aged past-due amounts preferentially as follows: \$80.00 was past due for 120 or more days, and this is paid in full, leaving \$120.00 to go toward the \$140.00 amount past due for 90 days in April. Thus, effective with the May invoice, \$20.00 is now past due for 120+ days, \$110.00 for 90 days, etc. The past-due amounts still remaining are now charged interest according to the formula shown.

- On the June 15 invoice, the 5/25/87 payment of \$150.00 was first applied to the \$1.17 interest charge, then the most aged past-due amount of \$20.00, then to the \$110.00, yielding a zero balance in the 120+ category. The remaining \$18.83 paid was then applied to the \$70.00 past-due amount, leaving a 90 day past due amount of \$51.17.

- On the July 15 invoice, the 6/26/87 payment of \$392.05 equalled the total amount due from the June invoice. Therefore, the customer has no past-due amounts as of July 15, and no interest is charged. The total amount due is the \$105.00 charge for June usage.

	April 15 <u>Invoice</u>	May 15 <u>Invoice</u>	June 15 <u>Invoice</u>	July 15 <u>Invoice</u>
MEDLARS charge for previous month's usage	\$100.00 (for March)	\$125.00 (for April)	\$115.00 (for May)	\$105.00 (for June)

[Editor's Note: The British Library is one of the sixteen Non-United States Centers which have agreements with NLM to provide MEDLARS services. Some provide service by managing online access to the NLM computer, such as the BLAISE-LINK Service offered by the British Library. Others receive copies of NLM databases and mount them on their own computers. NLM extends warm wishes to The British Library in its celebration of ten years of MEDLARS service.]

MEDLARS in Britain

Peter Dale

BLAISE-LINK, The British Library

The British involvement with MEDLARS began in 1966 when staff of the National Lending Library for Science and Technology (one of the various bodies that merged in the early 1970's to form the new British Library) introduced the UK MEDLARS Search Service. In 1968 this service became the UK MEDLARS Centre and began to index British journals, as one of NLM's bilateral partners, for inclusion in MEDLINE. This indexing activity has continued ever since, and today the British Library's indexing accounts for some 5% of the total input to MEDLINE.

In 1977 the British Library introduced BLAISE (British Library Automated Information Service) and thus made the online MEDLARS files available to British and European users. Initially this service operated as a tape centre, whereby the British Library mounted its own duplicate copies of the NLM files alongside a variety of other databases. In 1982 the service was reorganised and a new service called BLAISE-LINK, was set up to be concerned exclusively with the online MEDLARS service. At this time the British Library switched from being an NLM tape centre to being an online centre, and so the British Library users began to access the NLM computer directly, via satellite links which connect British and other European data networks to TELENET and TYMNET.

Although BLAISE-LINK users connect to the NLM computer alongside United States users, all the marketing, training, user support, administration and billing activities are carried out by BLAISE-LINK. In effect, NLM treats BLAISE-LINK as if it were a single user with several hundred User ID codes - and leaves the British Library to administer those passwords as it sees fit. Consequently, from the user's point of view, BLAISE-LINK performs all the functions of an online host service. The only indication that NLM is actually the host comes with the system greeting: "Welcome to the National Library of Medicine's ELHILL retrieval system." This arrangement works very well, thanks to the excellent cooperation between NLM's MEDLARS Management Section and the BLAISE-LINK staff.

USER SUPPORT

BLAISE-LINK staff in London operate a Help Desk for users - for which they maintain regular contact with MMS staff, for troubleshooting purposes - and also run a full program of training courses, user meetings, and so on. In addition, they publish a comprehensive range of user documentation, which includes *The BLAISE-LINK User Manual*, *The BLAISE-LINK Mini Manual*, an *Intromed Workbook*, and a *MeSH Workbook*.

The Help Desk is equivalent to the MMS Service Desk. It is important that BLAISE-LINK operates its own Help Desk for a variety of reasons, but most notably due to the fact that British users generally begin searching the system about five hours before the NLM staff begin their day (and other European users are a further one or two hours ahead!). Also, many of the queries are concerned with telecommunications problems and must therefore be dealt with locally.

The BLAISE-LINK training courses closely parallel the courses run by NLM, with the only major difference being in the coverage of the logging in procedure which is a little more complicated than logging in from within the USA.

PUBLICATIONS

Some users find it surprising that BLAISE-LINK produces its own system documentation instead of using NLM's materials, but there are a number of good reasons why it should do so. First of all, the cost of importing multiple copies of the *Online Services Reference Manual* and other items of documentation would prove to be uneconomic, especially in view of the fact that the British Library supports an excellent in-house publishing facility. Another factor is that, as mentioned above, the telecommunications procedure is totally different for BLAISE-LINK users and must therefore be reflected in the documentation. Also, perhaps to the surprise of some American readers, British and European users feel much more comfortable with "British English" than with "North American English." There are differences in spelling, terminology, etc., which can either confuse or irritate the user, and so it is highly desirable that the documentation is "translated" into British English. The British Library does, however, import *Annotated MeSH*, *MeSH Tree Structures*, and *Permuted MeSH* from NTIS for sale to BLAISE-LINK users (since there is nothing that we can do about the language of MeSH being North American English!).

Accordingly, the *Online Services Reference Manual* has been "translated" into the *BLAISE-LINK User Manual*, and is issued - like its parent - in a ring binder which can be quickly and easily updated. Updates are prepared, and sent out free of charge to all subscribers, as soon as any significant system change is implemented.

From the outset, many users complained that the sheer bulk of the *User Manual* meant that it was virtually impossible to use during a live search session. Since many users need to check unit records, special search techniques, etc., while actually carrying out a search, it was soon realised that a more compact manual, which could be used at the terminal, was required. After much deliberation it was decided that the *User Manual* should be retained as the definitive system manual for reference use and for use in search planning, while a new condensed version, for use at the

terminal, should be prepared. This condensed version was called the *BLAISE Mini Manual* and it evolved into the *BLAISE-LINK Mini Manual* when the BLAISE-LINK service was introduced. The *Mini Manual* summarises the main points of the *User Manual*, and includes the full unit record descriptions, sample records, and so on. It has proved to be the most popular item of documentation that BLAISE-LINK produces, and has so far run three editions.

Other items of BLAISE-LINK documentation include the *Intromed Workbook* which provides a modular programmed learning course to be followed in conjunction with the INTROMED Training file on MEDLARS; the *MeSH Workbook* which provides detailed instruction in the intricacies of the MeSH vocabulary; a selection of Factsheets for each individual MEDLARS file; and a "Pocket Guide" which supplies the most basic information on logging in, searching and printing, and which can double up as a terminal card to be pinned to the wall beside the terminal to serve as an "aide memoire" for occasional users.

MEDLARS MINI MANUAL

Over the years, a number of American users have seen the *BLAISE-LINK Mini Manual* and suggested that a North American version would be useful. In response to this, the most recent edition of the *BLAISE-LINK Mini Manual* has been carefully revised and adapted for use in North America, and is now available as the *MEDLARS Mini Manual*.

The *MEDLARS Mini Manual* has been carefully designed to include all the basic information required for planning and running a straightforward search, and it is arranged in an easily handled format that can be quickly consulted at the terminal during a search. In addition to functioning as an invaluable quick-reference tool for all MEDLARS searchers, whether novice or experienced, the *MEDLARS Mini Manual* also serves as a very useful introduction to the system for new users - or as a refresher for more experienced searchers. The early

sections of the *Mini Manual* outline the basics of connecting to MEDLARS and running a simple search. These sections condense the most fundamental points with which the user should be familiar in order to retrieve relevant records and print the results. Following the introductory sections, the main body of the *Mini Manual* is devoted to individual sections covering each of the individual files in MEDLARS. These sections describe the subject content and basic search techniques for each file, and provide a sample record and unit record description (the full list of fields available for searching and printing in that file).

The *MEDLARS Mini Manual* costs \$25. If any *NLM Technical Bulletin* readers would like more details please write me: Peter Dale, BLAISE-LINK, The British Library, 2 Sheraton Street, London W1V 4BH, England (or enclose a check for \$25 to order a copy immediately - alternatively, we can send a pro forma invoice on request).

I would like to think that I have shown that the MEDLARS activity in Britain is little different from MEDLARS activity in the USA. It is fascinating to think that the MEDLARS searcher in Cambridge, Mass., is searching the same computer, by the same procedure, as the user in Cambridge, England (likewise the respective users in Birmingham, Alabama and Birmingham, England, and, indeed, Bethesda, MD and either of the two Bethesdas in Wales!). Late last year BLAISE-LINK users joined in the celebrations for the 15th anniversary of MEDLARS online by sharing the free day's access to MEDLINE. By the time this article appears, BLAISE online services will be celebrating ten years of online access to MEDLINE. On behalf of all MEDLARS searchers on this side of the Atlantic I would like to send good wishes to all *NLM Technical Bulletin* readers, and to express a sincere hope that we will share many more anniversaries and landmarks in the decades ahead.

Editor's Note: Each month the NLM Technical Bulletin features a column of questions/answers concerning GRATEFUL MED. Contributions for this column will be appreciated. This month's column is devoted to previewing Version 2.0 of GRATEFUL MED.

GRATEFUL MED Version 2.0 will be released during this Spring. Any user who originally purchased Version 1.0 from the National Technical Information Service (NTIS) will automatically receive Version 2.0 and its revised manual in the mail at no additional charge.

Version 2.0 has added enhancements for searching, improvements for data storage, and shortcuts for accessing screens. A brief description of some of the major changes follows.

MESH TERMS ADDED

If you like searching with NLM's controlled vocabulary (MeSH) you'll love this new feature which allows you to see a listing of MeSH terms. Very simply, this can be done by typing any word on a SUBJECT line of the Input screen and pressing the F10 key. You will then be shown a numbered display of 20 MeSH terms alphabetically adjacent to the word you entered. You may select any term from the display by its number and also move around the entire listing in search of other terms you may want to select. When you have made your selections, you may press the ESCAPE key and be returned to the input screen. The terms you selected will

automatically be entered on the SUBJECT line.

Because the list of MeSH terms is so large (over 14,000 terms), a second floppy disk will be included with Version 2.0. If you install Version 2.0 onto your hard disk you should note the increased space requirement for the MeSH file is 341,376 bytes.

ADDITIONAL CITATION FORMAT ADDED

The new version allows you to specify whether your retrieval is to be downloaded with or without the MeSH terms. Downloading without MeSH terms reduces your connect time as well as the number of characters you receive and is, therefore, more economical. However, if you choose not to download MeSH terms, you will not be able to utilize the relevancy feature which suggests MeSH terminology.

DOWNLOADING & FILE TRANSFERS

GRATEFUL MED users with floppy disk systems will be pleased to know that Version 2.0 warns them when their downloaded retrieval exceeds the capacity of their disk and prompts them to insert another disk for the "overflow" retrieval.

Users will be glad to hear that Version 2.0 has added another option for handling the data after it is downloaded. You may now either print the reformatted citations on your printer or copy them to a file that you name on any drive you specify.

ELIMINATION OF MEDLINE FRONTFILE OVERWRITE

Version 2.0 no longer overwrites the MEDLINE (frontfile) search results if you choose to perform a backfile search.

DOWNLOADING FUTURE VERSIONS

This new version also includes a feature which will let you download future versions of GRATEFUL MED from a host computer. Announcements will be made in advance of new versions becoming available, and if you miss those, GRATEFUL MED will automatically alert you that you are not using the most current version.

ESCAPE DURING INPUT SCREEN SEARCH

Version 2.0 uses the F9 key to interrupt an Input screen search and allow the user to interact directly with the NLM computer.

IMPORTANT NOTICE

The Version 2.0 installation procedures, found in Part 4 of the new User's Guide, are

different from the procedures for Version 1.0. Please be sure to read the Version 2.0 installation procedures before attempting to use GRATEFUL MED Version 2.0.

NEXT MONTH: More information on Version 2.0.

GRATEFUL MED users should also note the following articles and/or features in this issue:

NTIS TO BEGIN CHARGING INTEREST ON OVERDUE MEDLARS ACCOUNTS, p.1.

TECHNICAL NOTES, p.3.

NLM GAPS PROJECT: IMPACT ON MEDLINE, p.16.

The National Technical Information Service is now mailing out copies of Version 2.0 of GRATEFUL MED gratis, along with a new User's Guide, to all who purchased Version 1.0.

NLM Gaps Project: Impact on MEDLINE

NLM's Technical Services Division and Public Services Division have recently intensified efforts to identify and fill serial gaps in NLM's collection. (See the December 1986 *NLM News* for more information.) Some older issues from MEDLINE journals are now being indexed as the gaps are filled. As a result, citations to articles with old publication dates may appear in SDILINE and MEDLINE. For example, the February 1987 SDILINE of 22,329 citations contained 474 citations from 54 "gap issues" of indexed journals with publication dates of 1984 or earlier.

Some users may find the appearance of "old" articles in SDILINE and MEDLINE bothersome, but NLM thinks it is important

to provide MEDLARS users with complete bibliographic coverage.

It is NLM's policy not to publish citations to gap issues in the monthly *Index Medicus*. They are, however, included in the *Cumulated Index Medicus* and therefore must be entered into MEDLINE. These newly indexed citations to older issues may also appear in Automatic SDI searches and other MEDLARS databases that contain MEDLINE data such as CANCERLIT, HEALTH, and TOXLINE.

Users who discover that NLM has not indexed a particular issue of a regularly indexed journal may contact the MEDLARS Management Service Desk to report the gap. Remember that citations to issues which are indexed long after their publication dates may not appear in the backfile which corresponds to their year of publication. Therefore, searchers may need to check several databases when looking for a certain citation or journal issue, particularly with the implementation of this gaps project.

Monthly Search Hint:

Indexing Note: AGED, 80 AND OVER

Elizabeth J. Van Lenten, Ph.D.
Index Section, NLM

The term AGED, 80 AND OVER has been added as a new major descriptor for 1987, with entry terms of CENTENARIAN, NONAGENARIAN, OCTOGENARIAN and OLDEST OLD. The data form (DF) abbreviation AGED 80 has also been added and can be used for online searching. It does not appear in the printed *Medical Subject Headings -- Annotated Alphabetic List, 1987* as a data form (DF) in the annotation, but will be added to the 1988 edition.

The check tag AGED is required any time humans 65 years or older are identified in indexed articles. Only if the article specifically identifies the over-80 group will the additional term AGED, 80 AND OVER be used. (The relationship is analogous to that between the check tag INFANT, NEWBORN and those terms indented under it in the M1.471 tree.)

When a subject of an article is 80 years old or older, indexers will routinely index with this heading, as well as checking the tag AGED. In most cases, the heading, AGED, 80 AND OVER, will be NIM (i.e., will not be preceded by an asterisk). This heading is being used as IM (i.e., with an asterisk) only for the psychological, sociological, or

philosophical aspects of persons in this age group.

Figure 1 summarizes the various uses of the new term. Please note that the embedded AND must be disguised for searching, e.g.: AGED, 80 A#D OVER. Remember that the see references AGED 80 and OLDEST OLD can also be used for searching.

The uses of the term for searching may be summarized as follows: To restrict a search to articles dealing with individuals 65 years and older, use AGED in the search strategy. To restrict a search to articles dealing with individuals 80 years and older, use AGED, 80 AND OVER. (Remember, this term retrieves only citations entered since the 8701 Entry Month (EM) and that this retrieval is a subset of the AGED retrieval.) To restrict a search to articles dealing primarily with the psychological, sociological, or philosophical aspects of individuals 65-79 years old, use *AGED in the search strategy. To restrict a search to articles dealing primarily with the psychological, sociological, or philosophical aspects of individuals 80 years and older, use *AGED, 80 AND OVER. For comprehensive retrieval on these aspects in the aged, combine the two headings (e.g., *AGED OR *AGED, 80 A#D OVER) or EXPLODE *AGED (as AGED, 80 AND OVER is indented under AGED). All of the citations in these four groups will have the check tag AGED on them.

In short, the uses of the check tag AGED have not changed; and the IM heading *AGED now refers to the group 65-79 years of age, or to a group when the author does not specify the oldest age discussed. The new term merely adds a further level of specificity to deal with an increasingly longer-lived population.

<u>Article Content</u>	<u>Age-related MeSH Headings Used</u> ^{1/}
Age 79 case report	AGED
Age 80 case report	AGED AGED, 80 A#D OVER
Age 79 & 80 case report	AGED AGED, 80 A#D OVER
Age 66-79 range	AGED
Age 80-90 range	AGED AGED, 80 A#D OVER
Age 66-90 range	AGED AGED, 80 A#D OVER
Aged as a political force (65-79)	*AGED
Aged as a political force (65-90)	*AGED, 80 A#D OVER *AGED
"Over-65's as a political force"	*AGED
"Over-80's as a political force"	*AGED, 80 A#D OVER AGED

^{1/} NOTE: The embedded AND in the new heading must be disguised for searching with a hash mark in place of one of the letters so that the system does not interpret the word as the Boolean operator, e.g.:

AGED, 80 A#D OVER

NEW SERIALS AND TITLE CHANGES ANNOUNCEMENT, NON-INDEXED TITLES,
FEBRUARY 1987

The following substantive serial titles were received or ordered by the Serial Records Section. Titles indexed for MEDLINE, HEALTH and POPLINE are listed in the "INDEXED TITLES UPDATE" section. Please include the NLM call number on interlibrary loan requests. Of course, NLM cannot fill loans

for titles not yet received by the Library. The list is offered as an early announcement and will include price information if known. Information provided is not authorized NLM cataloging data. For further information, please contact Ms. Esther Baldinger, (301) 496-1276, Technical Services Division, NLM.

Live Broadcast - GRATEFUL MED Via the Hospital Satellite Network

Patricia C. Buchan
NLM Online Services Training Coordinator
MEDLARS Management Section, NLM

On January 22, 1987, the National Library of Medicine (NLM) and the Veterans Administration (VA) sponsored a live teleconference entitled "*Introducing GRATEFUL MED: Easy Access to the World's Biomedical Literature.*" The two-hour program was broadcast over the Hospital Satellite Network to 22 Veterans Administration Medical Centers in ten states located throughout the Western region of the U.S. Nearly 600 health professionals, librarians, information specialists, and others attended the teleconference and participated in the program.

"*Introducing GRATEFUL MED*" was primarily designed to inform interested health professionals about the availability of NLM's new user-friendly software for accessing the Library's online databases. John Gronvall, M.D., Acting Medical Director, VA, and Donald A.B. Lindberg, M.D., Director, NLM, provided opening remarks.

Continued on page 14.

Technical Notes

Whenever applicable, the heading of each Technical Note includes a reference to the section of the Online Services Reference Manual 1986 that is considered most relevant to the item being discussed, e.g., (Manual 4.7.2). Users should keep in mind that the item may pertain to other sections of the Manual as well.

MEMORIAL DAY HOLIDAY SCHEDULE

The NLM computer will be up on a guaranteed basis on Monday, May 25, 1987, the day of the federal government's observance of Memorial Day. Non-prime rates will be in effect all day and the MEDLARS Management Service Desk will not be staffed. DOCLINE will be up on a non-guaranteed basis on Monday, May 25, but the DOCLINE Service Desk will not be staffed. On Memorial Day, Saturday, May 30, 1987, the NLM computer will be up all day on the regular Saturday non-guaranteed schedule at non-prime rates. DOCLINE will not be up on this day. The TOXNET computer system status is always guaranteed with non-prime rates in effect on all holidays. Please see the October 1986 *NLM Technical Bulletin*, Appendix C, for the complete 1987 holiday schedule.

GRATEFUL MED, VERSION 2.0

Distribution of GRATEFUL MED, Version 2.0 officially began on March 14. The package includes the new software (2 floppy disks) as well as an improved User's Guide. Those who purchased GRATEFUL MED, Version 1.0 will automatically receive Version 2.0 in the mail from NTIS at no additional charge. Distribution to Version 1.0 purchasers will be on a staggered basis several weeks. Version 2.0 contains many enhancements, including the addition of the MeSH Vocabulary terms. See the GRATEFUL MED column in the March issue

of the *NLM Technical Bulletin* as well as this month's column for descriptions of these enhancements.

CATLINE/AVLINE UPDATE SCHEDULE CHANGE

Effective April 23, 1987, CATLINE and AVLINE are now updated every Thursday night when the computer comes down for post-processing. The updated files are available after the computer comes back up Thursday night around 11:30 p.m. ET. Previously, these two databases were updated weekly on Thursday mornings from approximately 7-8:30 a.m. ET, during which time the files were unavailable for searching. The new update schedule occurs only slightly later in the week and permits greater availability of these two MEDLARS databases. Please refer also to the article entitled "Regeneration of CATLINE/AVLINE" on page 5 of this issue for information on changes to these two databases.

"NEW SERIAL TITLES AND TITLE CHANGES ANNOUNCEMENT, NON-INDEXED TITLES" LIST TO BE DISCONTINUED

The Technical Services Division of NLM is discontinuing with this issue of the *NLM Technical Bulletin* the section entitled "New Serial Titles and Title Changes Announcement, Non-Indexed Titles." This list has always represented only a selected group of NLM serial titles, and not the complete serials acquisitions of the Library. With NLM's growing number of MEDLARS users, the space gained will allow more room for articles that could be useful to a larger number of *NLM Technical Bulletin* readers.

Users who want to produce an updated comprehensive list of all ON ORDER and IN PROCESS serial titles can easily do so by searching SERLINE and ranging on the DA (Date of Entry) data element. For example, to get a list of all ON ORDER and IN PROCESS records that were added to SERLINE in January and February, the

search strategy would be:

SS 1 /C?

USER:

(ca) on order or in process

PROG:

SS (1) PSTG (2624)

SS 2 /C?

USER:

1 and from 870101 to 870229 (da)

PROG:

S (2) PSTG (132)

Please note that the other portions of the Serials Update Section of the *NLM Technical Bulletin* will be continued, because they deal with journal titles indexed for MEDLARS databases.

NLM SERIAL PUBLICATIONS

The *Index of NLM Serial Titles*, a "keyword-out-of-context" index of serial titles in the NLM collection, has ceased publication with the 5th edition, 1984. The Government Printing Office (GPO) has announced that no more copies are available. However, all of the information that was available in the *Index*, and more, is easily accessible in the SERLINE database and in *Health Sciences Serials*, a quarterly microfiche publication of all NLM serial titles.

SERLINE, which is updated every 4 to 6 weeks, is an excellent substitute for the keyword index, as all titles, cross-references, and publishers are searchable by Text Word (TW). For example, a patron is uncertain of the exact title wanted, but knows the title

includes the words "biotechnology" and "reviews." A TW search in SERLINE reveals:

SS 1 /C?

USER:

(tw) biotechnology and reviews

PROG:

SS (1) PSTG (2)

SS 2 /C?

USER:

prt ti

The search request has been narrowed to two possible titles.

Health Sciences Serials (HSS) is another source of serial title information. GPO has recently announced a price reduction for *HSS* in 1987 to \$10.00 for a one-year subscription, down from \$15.00 per year in 1986. The foreign price is \$12.50 per year. Individual copies may be purchased for \$2.75 each (\$3.44 foreign).

HSS includes bibliographic, subscription, and holdings information for all titles that are in the SERLINE database. Approximately 500 entries are added quarterly. It lists locator information for 150 major biomedical libraries throughout the United States.

CLINPROT INDEX TERM LISTING

The CLINPROT Index Term listing for March 1987 is now available. It may be requested by writing to the MEDLARS Management Section. Please include a self-addressed label with your request. No return postage is necessary.

Please access FILE INFORM and type NEWS to see the most recent news items online!

Regeneration of CATLINE/AVLINE

Carolyn N. Davis
 Technical Services Division

The regeneration of the CATLINE and AVLINE files, completed on April 23, consists of new indexing rules for names as subjects, the addition of a new searchable century tag, new valid values for shelving locations, and the update of MeSH terms to the 1987 vocabulary. The changes are described below with the database(s) affected indicated in parentheses.

NEW SEARCH TECHNIQUES

A. PERSONAL NAMES, CONFERENCE NAMES, & CORPORATE NAMES AS SUBJECTS (CATLINE & AVLINE)

Personal, conference, and corporate names used as subjects are now indexed separately from their counterpart names as authors. Previously all occurrences of a name used as an author and a subject were indexed as authors only (PN, CN, CNA) even though a name used as a subject was correctly coded (PS, CS, CNS). For example, a direct search for a Personal Name Used as Subject (PS) retrieved records with that name used as author as well as subject because all personal names were computer-indexed as one type, PN. The only way to retrieve names as subjects was to enter a STRINGSEARCH for the specific name type after the initial subset was retrieved.

When a name search is not qualified and the name exists as a personal author (PN) and a subject (PS), the new indexing feature will result in a multi-meaning message for the name as subject and the name as an author. When the name is qualified, for example with (PS), only postings for records about the person will be retrieved.

B. CENTURY TAGS ASSIGNED TO ALL RECORDS (CATLINE)

Because CATLINE now contains many records for older materials in NLM's historical collection, a new searchable century tag has been added to assist in limiting searches by publication date. The century tags have been assigned to all records based on the Year of Publication (Y1) field. This tag resides in the Keyword (KW) field. The century tag can be searched in two ways: directly by qualifying the tag with (KW) or by Text Word searching (TW). Note that the search string is different depending on the method chosen.

Example of direct search of Keyword (KW) field:

20C (KW)

Example of Text Word searching (TW):

20-C (TW)

The list of century tags with the corresponding date ranges is below:

DATE RANGE	TAG
1900-	20C
1800-1899	19C
1700-1799	18C
1600-1699	17C
1500-1599	16C
1400-1499	15C
1300-1399	14C

NEW VALID VALUES

SHELVING LOCATIONS (CATLINE & AVLINE)

Shelving locations stored in the Shelving Location (SL) field have been standardized

and changed to the new values listed in Figure 1.

1987 MeSH VOCABULARY (CATLINE & AVLINE)

All records in CATLINE and AVLINE have been updated to reflect the 1987 MeSH vocabulary. All tree numbers and cross references for MeSH on records cataloged in

1987 and earlier point to the new vocabulary.

Until the MeSH update in this April regeneration, CATLINE and AVLINE contained a mixture of 1986 and 1987 terms which required caution in performing EXPLOSIONS using 1987 terms. Searchers can now EXPLODE descriptors as well as tree numbers for all terms. The problem causing the mixed vocabularies in CATLINE and AVLINE files from mid-December to regeneration time is being addressed, and new procedures to prevent this from occurring in the future are being explored.

Broad Phase I and II Protocol Retrieval in PDQ

David J. Perry, M.D.

International Cancer Research Data Bank Branch,
International Cancer Information Center, National Cancer
Institute

DEFINITION OF PHASE I AND II

Investigational protocols in PDQ are classified by their phase. Phase I trials are the earliest human trials of new drugs that have shown special promise in animal studies. These trials are primarily aimed at establishing a safe dose and schedule for future efficacy trials and to define human toxicity. Phase II trials are the first actual human efficacy trials. Patients with advanced cancers, for whom no existing therapy is effective, are treated with a new drug to see whether the drug causes shrinkage of measurable malignant lesions. In addition, Phase II trials are designed to evaluate patients for toxicities observed in the Phase I trials or not previously noted. If a drug shows activity in Phase II testing, it normally will be used in a Phase III trial comparing the new drug to drugs of known efficacy.

Nearly all Phase I trials and a number of Phase II trials are directed at the full range of human cancers because study data are still insufficient to clearly establish specific activities toward particular tumor types. These are termed "broad phase I and II protocols." The eligibility requirements generally state that patients must have advanced cancers that are resistant to standard therapies.

Previously such protocols were indexed for PDQ with a large number of diagnostic terms covering the whole range of common adult and childhood cancers. For example, if the user entered the term "breast cancer," both protocols specifically focused on patients with breast cancer and the broad Phase I and

II protocols were retrieved. Unfortunately, this often led to a very large retrieval of protocols for common cancers. For some less common cancers, nearly all the retrieved protocols were broad Phase I and II protocols and did not specifically mention the term used to retrieve them.

PROTOCOL PHASE INDEXING CHANGE

Protocol indexing is currently being changed to ameliorate these problems. Beginning in April 1987, broad Phase I and II protocols will be retrievable in the following ways:

1. By choosing Phase I or Phase II from the protocol menu without first specifying a diagnosis.
2. By typing in the term "childhood solid tumor" or "adult solid tumor" after selecting option 2 -- diagnosis -- from the protocol menu.
3. By retrieving protocols by drug, then by phase.

Option 1 is currently available; it leads to hundreds of protocol listings and will need to be used with further retrieval criteria such as state or drug.

Option 2 will be implemented in April 1987. Again, a large number of studies will be retrieved with these terms and other criteria will need to be used.

Option 3 is currently available; if the user is interested in specific drug trials, this is the best option.

For users who were accustomed to seeing large numbers of protocols retrieved for common cancer diagnoses, the change in indexing will decrease the number of retrieved protocols significantly. However, these protocol summaries which are retrieved will be specific for the diagnoses. If no specific protocols are retrieved for a given diagnosis, the user will be reminded that protocols can be retrieved using the "adult

solid tumor" and "childhood solid tumor" index terms.

PROTOCOL ENTRY INFORMATION

Finally, users should be aware that investigators are sometimes more restrictive

in allowing entry of patients with a malignant diagnosis than the protocol itself would suggest. Therefore, prior to referring a patient to a broad Phase I or II trial, it is wise to contact the investigator to confirm that the diagnosis is in fact appropriate for the trial. In the future, potential chairmen will be asked to provide information on the range of acceptable diagnoses in broad Phase I and II trials.

NLM Automatic SDI Service Update

Joyce A. Conner
MEDLARS Management Section, NLM

P. E. Pothier
MEDLARS Management Section, NLM

The NLM Automatic SDI (Selective Dissemination of Information) service provides for the creation of current awareness bibliographies. It is a useful way for health professionals and others to be supplied with current research in a given subject area. The service is available for SDILINE (most recent monthly update of MEDLINE), TOXLINE, CANCERLIT, HEALTH, POPLINE, AVLINE and CATLINE. Each month when these databases are updated, users who have stored search strategies and have established SDI Service are automatically mailed a printout of citations that match their Automatic SDI stored search formulations.

This article covers two aspects of the Automatic SDI service as offered by NLM. The first is a general overview of the service and the distribution of the revised Automatic SDI Request Form and the second is the information on the impact of adding the Unique Identifier (UI) data element to the standard SDILINE and other database PRINT formats.

GENERAL OVERVIEW AND DISTRIBUTION OF REVISED FORM

Users who wish to begin SDI service may submit one copy of the Automatic SDI Request Form to MEDLARS Management Section for each database on which Automatic SDI service is desired. A revised Automatic SDI Request Form is enclosed with this issue as Appendix A. It is necessary to store the search formulations for the bibliographies in the NLM computer. The

searches must be stored using the STORESEARCH command and named according to the SDI-naming conventions. Instructions for these procedures are provided in the *Online Services Reference Manual 1986*, Section 5.2.

Searchers already participating in the Automatic SDI Service may use the Automatic SDI Request Form if they wish to: 1) change their mailing address; 2) change the print and/or sort format for any number range(s); or 3) stop service on a database. Please indicate the database(s) to which the changes should be made. If requesting an address change, a form should be submitted for each database for which the user has Automatic SDI service. The attached form may be used as a master from which to photocopy any additional forms needed for submission. The form is also found in Section 5.2.8 of the *Online Services Reference Manual 1986*, where full instructions also are provided. Users who currently have Automatic SDI service and do not wish to make any changes need not resubmit any Automatic SDI forms.

STANDARD PRINT FORMAT CHANGE

NLM added the UI (Unique Identifier) to all standard MEDLINE PRINT formats in the Fall of 1985. (See article in the August 1985 *NLM Technical Bulletin*, p. 1.) Similar enhancements were also made to the SI (Secondary Source Identifier) field in HEALTH and CANCERLIT. These two databases use the SI field rather than the UI field because the data in these databases come from various sources and the format of the SI field permits an alphabetic abbreviation identifying the data supplier, e.g., SI - MED/86004466. Both the UI and SI fields function as accession numbers for the citation and provide a means by which that one citation can be consistently retrieved in one search step. Addition of the unique "number" to the standard PRINT formats was made by NLM largely to assist in document delivery and in quality assurance and error reports. The numerical sequence can also be used when appropriate to request interlibrary

loans through DOCLINE.

DOCLINE accepts UIs from MEDLINE, CATLINE, and AVLINE. Several of the databases with Automatic SDI Service contain MEDLINE-derived records. The UI or SI from these records may also be used in DOCLINE. In CANCERLIT citations derived from MEDLINE, the 8-digit number following MEDL in the SI field is the same as the value in the UI field of MEDLINE. In HEALTH, the 8-digit numeric string following MED in the SI field corresponds to the UI of MEDLINE. For citations from the TOXBIB subfile in TOXLINE, the two digits following the first slash plus the six digits following the second slash equal the MEDLINE UI. Remember that many of these databases also include non-MEDLINE derived data, and the UI or SI for these citations will not work in DOCLINE. The POPLINE SI field contains values that are currently meaningless to DOCLINE.

IMPACT ON AUTOMATIC SDI SERVICE

How does all this relate to NLM's Automatic SDI service? The UI (Unique Identifier) or SI (Secondary Source Identifier) is automatically included in all "standard" PRINTs (unless that print format has been previously changed by the user). "Tailored" print formats do not automatically include the UI or SI. Remember that the print format is governed by the number range that must be the first part of the stored searchname.

Figure 1 indicates for each print format in the Automatic SDI Service whether the UI or SI will automatically be included in the printout. For example, according to Figure 1, the UI will automatically print for SDILINE searches named in the S001-200 number range (STANDARD) and the S201-400 range (FULL INCLUDE AD). The UI is not automatically included in the print formats for the other number ranges of SDILINE. To add the UI data element to the SDILINE Auto SDI printouts for stored searchnames beginning with S401-600, S601-700, or S701-800, submit an Automatic SDI Request Form. In Part II of the Form, the large box for CHANGE should be checked and the smaller box for PRINT AND/OR SORT FORMATS should be checked. Then in PART III, simply write the letter 'S' in the box and put 'INCLUDE UI' on the appropriate Numerical Range line.

SUMMARY

The NLM Automatic SDI Service provides an easy method whereby health professionals and others may keep current with the literature. The Automatic SDI Request Form (revised and attached as Appendix A) is used to initiate service or to specify changes once service is established. Figure 1 indicates for which number ranges the UI or the SI field is automatically included. The NLM Automatic SDI Request Form may be submitted to add the UI or SI to the other formats. Please call the MMS Service Desk, M-F, 8:30 a.m. - 5 p.m. ET, at either (800) 638-8480 or (301) 496-6193 if you have any questions or need assistance.

Figure 1

[Editor's Note: Beginning with this issue, the GRATEFUL MED column will address Version 2.0. We encourage all GRATEFUL MED users to install Version 2.0 as soon as it is received.]

In last month's column we previewed GRATEFUL MED Version 2.0. This month we will describe two features in more detail: MeSH Searching Features and 2400 Baud Access.

MeSH SEARCHING FEATURES

As we mentioned in last month's column, Version 2.0 includes about 14,000 MeSH terms (NLM's controlled vocabulary) which you may use in your searches. If you select terms from the MeSH display screen (accessible with the F10 key from a SUBJECT line of the input screen), you may want to try incorporating two other features. One allows you to EXPLODE terms, and the other to restrict to citations in which the term is the main point of the article.

EXPLODE (+)

As you may know, the NLM's MeSH vocabulary is built on a hierarchy; narrower terms are indented in the hierarchy under terms that are broader in scope. When searching MEDLINE you may EXPLODE a term and thereby search for that term as well as all the related terms considered narrower or more specific. For example, an EXPLODE of the MeSH term ANTI-ARRHYTHMIA AGENTS would search for citations indexed with that term as well as citations indexed with the names of specific drugs with this action.

Note that the EXPLODE command can only be used with MeSH terms and will generally

increase the number of citations retrieved.

To EXPLODE a term with GRATEFUL MED, simply type a plus sign (+) before you type in the number of the term from the MeSH display screen.

Many MeSH terms are located in more than one tree of the hierarchy. For example, the term CAROTID ARTERY DISEASES is in both the NEUROLOGIC DISEASES tree and the CARDIOVASCULAR DISEASES tree. If you EXPLODE CAROTID ARTERY DISEASES, GRATEFUL MED must choose to EXPLODE the term in only one of the trees. In this case, GRATEFUL MED will explode the term in the NEUROLOGIC DISEASES tree (because of a programmed selection for the term with the lower tree number). Consequently, the search will retrieve citations indexed with either CAROTID ARTERY DISEASES or CAROTID ARTERY THROMBOSIS, but not with MOYAMOYA DISEASE.

C10 - DISEASES-NEUROLOGIC
 CAROTID ARTERY DISEASES
 CAROTID ARTERY THROMBOSIS

C14 - DISEASES CARDIOVASCULAR
 CAROTID ARTERY DISEASES
 CAROTID ARTERY THROMBOSIS
 MOYAMOYA DISEASE

To get a better understanding of MeSH's hierarchy you may be interested in obtaining a copy of *Medical Subject Headings - Tree Structures, 1987*. (Available from the National Technical Information Service, Springfield, VA 22161, order number: PB86-227782/GBB; price: \$16.00 +\$3.00 handling.)

ASTERISK (*)

Occasionally you may want to restrict your search to retrieve only citations to articles which focus on a certain subject. This is easy to do because each record for a citation carries an asterisk on the MeSH terms corresponding to the main point of the article. (Other topics discussed in the article will be identified on the record by MeSH

terms that do not have an asterisk. Topics which are merely mentioned in an article, do not receive MeSH indexing.)

Note that the asterisk can only be used with MeSH terms and will decrease the number of citations a term will retrieve.

GRATEFUL MED will restrict your search to citations with the asterisk on a MeSH term if you enter an asterisk (*) before entering the number of the MeSH term from the display screen.

Combination (+ and *)

Sometimes you may want to combine the EXPLODE capability and the asterisk. That is, you want to search a term as well as the terms more specific to it, but you want to restrict your search to citations where these terms are the major point of the article. Simply type both the "+" and the "*" before entering the number of the MeSH term from the display.

2400 BAUD ACCESS

If you have a 2400 baud modem you must first activate a special SETUP file added to Version 2.0 which allows GRATEFUL MED to communicate with 2400 baud modems. The instructions for activating this special file are not in the User's Guide, but are instead found on a HELP screen accessible while in SETUP.

Start by entering GRATEFUL MED and choosing number 6, SETUP, from the ACTION screen. The first screen you will

see will start with, "Do you have a PC Jr or use COM2? (Y/N)." Ignore this question for now and press the HOME key to get to the HELP screens. Press the space bar to get to the fourth HELP screen labeled, "2400 BAUD." Print this screen on your printer (SHIFT/PrtSC) so you can refer to these instructions later. Next, press the ESCAPE key three times; once to get out of the HELP environment, again to get out of SETUP, and finally to exit GRATEFUL MED and return to DOS. Proceed with the instructions on the HELP screen you printed.

The last step of these instructions, "SEARCH (CR)", will take you back into GRATEFUL MED and lead you into SETUP where you can now continue.

If you have only 1200 baud access from your city you must still perform this modification if you have a 2400 baud modem. However, when you enter the TELENET or TYMNET number during SETUP precede the number with an "L" to indicate to GRATEFUL MED that the transmission will be at the lower speed.

GRATEFUL MED users should also note the following articles and/or features in this issue:

LIVE BROADCAST - GRATEFUL MED
VIA THE HOSPITAL STAELLITE
NETWORK, p.1.

TECHNICAL NOTES, p.3.

Live Broadcast

Continued from page 1.

Four sample MEDLINE searches highlighted the program and served to demonstrate the various types of online searches typically performed through the use of the INPUT form screens of GRATEFUL MED. One of the four searches included a preview of searching MEDLINE using Version 2.0 of GRATEFUL MED.

After details were provided about obtaining copies of the GRATEFUL MED software and applying for a MEDLARS User ID code, a toll-free telephone line was opened up for viewers to call in their questions or

comments. Numerous calls were received and answered live by the panel of NLM staff members who had also written and presented the material during the telecast. The panel included Jane Bryant, Patricia Buchan, Jane Rosov, and Kathleen Stenger, all from the MEDLARS Management Section.

Copies of the edited version of "*Introducing GRATEFUL MED*" are available on 3/4" videocassette and can be borrowed from any of the seven Regional Medical Libraries. The Call Number is Z 699.5.M39 VC no.3 1987. These videocassettes can be transferred to other VCR formats and be used to train searchers to access MEDLINE using GRATEFUL MED.

Monthly Search Hint:

MeSH File in Alphabetical Order

Lou Wave S. Knecht
MEDLARS Management Section, NLM

Retrieval from a search in the MeSH Vocabulary File now prints in alphabetical order. Online and offline printouts are sorted in ascending order (A through Z followed by A through Z) by record type rather than descending order (9 through 0 followed by Z through A) by record type as before. The MeSH Vocabulary File contains three record types:

1. the MeSH main heading or descriptor record which is tagged with a value of D in the Record Type (RY) field;
2. the MeSH subheading or qualifier record which is tagged with a value of Q in the RY field; and
3. the supplementary chemical term record which is tagged with a value of C in the RY field.

All supplementary chemical records are now printed first, subheading records next, and MeSH main headings last, if the retrieval contains more than one record type. (This order was previously reversed.) Within record type, output is sorted by Name of

Substance (NM) of the supplementary chemical records; Subheading (SH) for the qualifier records; and MeSH Heading (MH) for the descriptor records.

Most searches conducted against the MeSH file will retrieve hits within only one record type rather than across record types. Therefore, the greatest benefit from this change is that lists generated from MeSH now automatically print in alphabetical order. It is no longer necessary to use OFFSEARCH and the SORT= instruction to create useful searching "help sheets" from the online MeSH file. For example, Figure 1 shows how to produce a quick list of all subheadings and their searching abbreviations used in MEDLINE.

Another example is the simple search outlined in Figure 2 to isolate all MeSH headings new for 1987 that have a Data Form (DF) abbreviation for online searching. DF's are abbreviations or acronyms that can be used for searching in place of some of the "longer" MeSH headings; they function like see cross references. The name Data Form is derived from the original use of these abbreviations by the NLM indexers who typed them on data input sheets. (Some NLM contract indexers still use data input sheets.)

Remember, also, that NLM has provided for many other searching terms in addition to DF's by expanding the number and variations of see references found in the BX (Backward Cross Reference) field of the MeSH file records. These see references found in the BX field largely tend to be spelled-out synonyms for the MeSH heading as opposed to abbreviations or acronyms. See the December 1986 *NLM Technical Bulletin*, p. 13.

NEW SERIALS AND TITLE CHANGES ANNOUNCEMENT, NON-INDEXED TITLES,
MARCH 1987

The following substantive serial titles were received or ordered by the Serial Records Section. Titles indexed for MEDLINE, HEALTH and POPLINE are listed in the "INDEXED TITLES UPDATE" section. Please include the NLM call number on interlibrary loan requests. Of course, NLM cannot fill loans

for titles not yet received by the Library. The list is offered as an early announcement and will include price information if known. Information provided is not authorized NLM cataloging data. For further information, please contact Ms. Esther Baldinger, (301) 496-1276, Technical Services Division, NLM.

Preview: TOXLINE Regeneration Plans

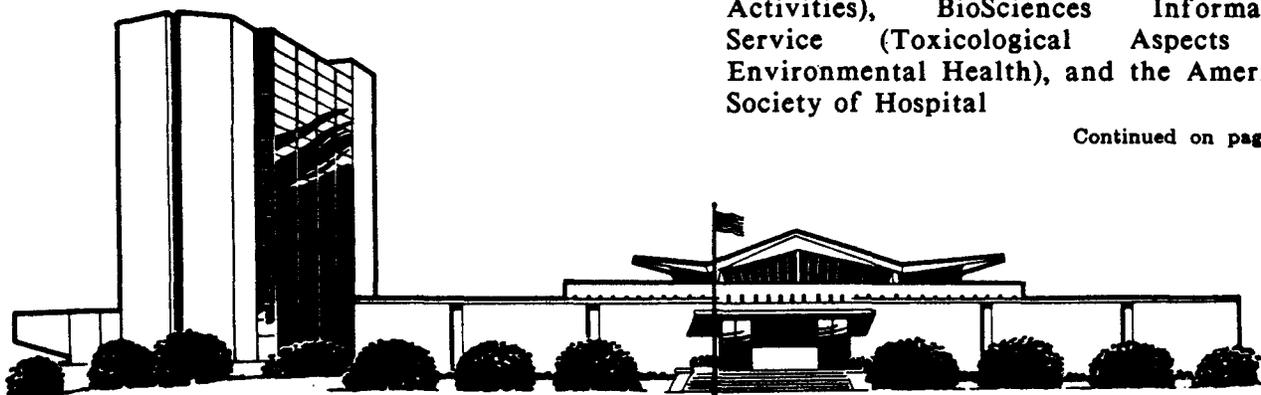

Jeanne C. Goshorn

Chief, Biological Information Services Section, SIS

NLM has in the past regenerated the TOXLINE file in order to change the segmentation by publication year, perform file maintenance activities, and provide file enhancements such as improved search capabilities or changes to record formats. A regeneration of TOXLINE has been planned for this Summer that will involve a major departure from the current front file/back files structure.

In order to provide NLM users with a wide scope of toxicology-related information at a significantly reduced cost, for the first time the subfiles will be segmented in TOXLINE so that those files which carry no royalty charges can be accessed separately from those with associated royalty costs. Increases in royalty charges set by the providers of three TOXLINE subfiles -- the Chemical Abstracts Service (Chemical-Biological Activities), BioSciences Information Service (Toxicological Aspects of Environmental Health), and the American Society of Hospital

Continued on page 13.

Technical Notes

Whenever applicable, the heading of each Technical Note includes a reference to the section of the Online Services Reference Manual 1986 that is considered most relevant to the item being discussed, e.g., (Manual 4.7.2). Users should keep in mind that the item may pertain to other sections of the Manual as well.

INDEPENDENCE DAY HOLIDAY SCHEDULE

The NLM computer will be up on a non-guaranteed basis on Friday, July 3, 1987, the day of the federal government's observance of Independence Day. Non-prime rates will be in effect all day and the MEDLARS Management Service Desk will not be staffed. DOCLINE will be up on a non-guaranteed basis on Friday, July 3, but the DOCLINE Service Desk will not be staffed. On Independence Day, Saturday, July 4, 1987, it is expected that the NLM computer will be up all day on the regular Saturday non-guaranteed schedule and at non-prime rates. However, DOCLINE will not be available on this day. The TOXNET computer system status is always guaranteed with non-prime rates in effect on all holidays. Please see the October 1986 *NLM Technical Bulletin*, Appendix C, for the complete 1987 holiday schedule.

PDQ BIOLOGIC RESPONSE MODIFIER MENU

Information on Biologic Response Modifiers (BRM's) which are being investigated in clinical protocols as anti-neoplastic agents can now be retrieved from a new menu in PDQ. This new sub-menu is an additional option from the Treatment Modality menu reached via the PDQ Protocol Retrieval menu. This new Biological Response Modifiers (BRM) sub-menu lists 9 therapies:

PROTOCOL SELECTION BY TREATMENT MODALITY

Modalities are:

- 1 Biological response modifier therapy
- 2 Bone marrow transplantation
- 3 Chemotherapy
- 4 Endocrine/hormone therapy
- 5 Hyperthermia
- 6 Radiation therapy
- 7 Supportive therapy
- 8 Surgery

*Enter desired number and press CR.

>1

Biological Response Modifiers (BRM) - Submenu

Therapies are:

- 1 Alpha interferon therapy
- 2 Beta interferon therapy
- 3 Gamma interferon therapy
- 4 Tumor necrosis factor therapy
- 5 LAK/Interleukin-2 therapy
- 6 Monoclonal antibody therapy
- 7 Monoclonal antibody conjugate therapy
- 8 Tumor cell preparation immunotherapy
- 9 Non-specific immunostimulant therapy

*Enter desired number and press CR.

>1,2,3

Searchers may select more than one BRM by separating them with a comma which is equivalent in PDQ to a Boolean OR operation. Refer to the PDQ online news and the help screen for further information.

CUMULATED INDEX MEDICUS ERRORS

Book 2 of the 1986 edition of *Cumulated Index Medicus* contains the following error: a duplicate of page 1062 was inadvertently substituted by the printer for page 1162 in the Bibliography of Medical Reviews Subject Section. The missing page 1162 contains references to review articles on the subjects

"Cortisone" through "Crohn Disease." Because these same references are repeated elsewhere in the regular *CIM* Subject Section, users may be directed to Book 8 (Subject Index Blo-Cu) for the missing information. However, if you wish to obtain a copy of page 1162, write NLM's Office of Inquiries, Attn: Page 1162. Please enclose a self-addressed label with your request.

The printer also reversed the placement of odd-numbered and even-numbered pages in Books 10 and 12 (Subject Index Fr-Ins and Subject Index Mol-Pi). The errors would be inconsequential except for the running heads.

By reversing the placement of all odd-numbered and even-numbered pages, running heads become practically meaningless. The running heads fall in the inside of the pages rather than to the outside corners where they would show the user the alphabetical subject range of the citations between the beginning of a left-hand page and the end of a right-hand page. These volumes will not be reprinted due to the prohibitive expense. Special precautions will be taken in the future to prevent a recurrence. To use these books, ignore the running heads and scan the pages for the bold-face subject headings throughout as guides to the desired references.

Correction: The article on p.15 of the April 1987 issue of the *NLM Technical Bulletin* entitled "MeSH File in Alphabetical Order" contained an error. The second sentence in paragraph one should be corrected to read, Online and offline printouts are sorted in ascending order (**A** through **Z** followed by **Q** through **9**) by record type rather than descending order (**Z** through **A** followed by **9** through **Q**) by record type as before.

*Please access **FILE INFORM** and type **NEWS** to see the most recent news items online!*

New Fields and Data Added to Regenerated CHEMLINE

George F. Hazard, Jr., Ph.D.
Specialized Information Services, NLM

The regenerated CHEMLINE file (Entry Month 8704) contains several major enhancements that greatly increase the variety of data available, as well as provide searching tools which will allow more comprehensive searching for users who are not expert in the chemical search area. The changes are described below.

RELATED REGISTRY NUMBER (RR) FIELD

Many times it is useful to find records for a parent substance as well as its salts, in order to identify further relevant citations in files such as TOXLINE. For instance, the record for Librium (RN 438-41-5) describes the hydrochloride salt of chlordiazepoxide (RN 58-25-3). However, the RN of Librium retrieves many fewer citations in TOXLINE than using the RN of chlordiazepoxide, the parent substance.

In order to alert users to the presence of selected (NOT ALL) related records of salts in CHEMLINE, a machine-assigned Related Registry Number (RR) is now carried in many records. The RR data will be generated on an annual basis. The Librium record is found in Figure 1.

Note that there are 3 RNs in the RR field, two of which are followed by a qualifier in parentheses. The qualifier shows the type of salt described in the "related" record without regard to its multiplicative prefix, e.g., "mono", "di", or "tri." In this case, the first two qualifiers are HCL (hydrochloride), HBR (hydrobromide), and, in the case of 58-25-3 (the Registry Number (RN) of the parent substance) there is no qualifier. The user may type the individual RRs as RNs to

retrieve records selectively, or may type the RN for Librium using the RR search abbreviation to retrieve the records for the three salts in which Librium's Registry Number appears as an RR, as shown in Figure 2.

Note that, including the record we started with, there are a total of 4 related substances in this case, and that the CHEMLINE record for each shows the RNs for the other three in the RR field. The third record printed, RN 58-25-3, is for chlordiazepoxide, the parent record of librium. This record contains data which will not only lead to higher TOXLINE retrieval, but also points to additional files such as HSDB in the Locator (LO) field. The RR field for Chlordiazepoxide refers the users to RN 14844-23-6 the hydrochloride salt, RN 438-41-5, the monohydrochloride salt (Librium), and RN 56617-98-2 the monohydrobromide salt.

Related Registry Numbers were generated for 34 salt types that were thought to be most useful in biomedical searching. An attempt was made to use salt types that tend to have similar biological activities, such as sodium salts and hydrochlorides. Figure 3 contains a table ordered alphabetically by the abbreviation used in the RR field for salt types for which Related Registry Numbers were generated, to the degree that data allowed.

The RR field is meant to give the user a quick, easy way to begin finding related CHEMLINE records useful in further searching. It is up to the user to apply judgment and select salts that are appropriate to the search request, and also to broaden the search in CHEMLINE to include salts which may not be referred to in the RR field. A more detailed article will be forthcoming concerning this new feature of CHEMLINE.

NOTE (NO) FIELD

A new Note field has been added for some textual data concerning either the usage of a certain substance or hints about searching. The field is Text Word searchable using the

qualifier (NO), rather than (TW). Two examples are given below:

NO - The term AZT will give ambiguous results in TOXLINE. Use RN or other names.

NO - ANSI: Secbumeton is intended for use as a herbicidal chemical for control of weeds in alfalfa and sugarcane.

In the first example, there is a warning that the term AZT is ambiguous when used in TOXLINE (because there exists a different substance with the same name) and should be used in this context only with care. The second instance gives the usage of the pesticide Secbumeton. This type of data is present for about 260 pesticides for which the official ANSI (American National Standards Institute) pesticide names have been added.

SYNONYM (SY) FIELD

Data from a new source of chemical nomenclature have been added to CHEMLINE in order to augment name coverage. Names from the publication *CTFA Cosmetic Ingredient Dictionary* were merged with names from our other sources by CAS Registry Number for records existing in CHEMLINE. Names from this source have been appended with the abbreviation "CTFA", and names which are monograph headings in the printed version of this book are designated "CTFA*.". This source has provided important, unique coverage of names in the cosmetic field.

Names from all other sources have been updated with the latest data from the *CA Index Guide*, the RTECS, HSDB, and MESH files, and the publication *USAN and the USP Dictionary of Drug Names*. The coverage of identifiers of regulatory interest, particularly pesticides, has been increased with the addition of over 28,000 identifiers from USDA and EPA to some 15,000 records. These include official ANSI pesticide names, AI3 numbers from USDA, and pesticide names and identifiers from the EPA

publication *Catalog of Pesticide Names and their Synonyms*, including the Caswell Number, and the EPA Pesticide Chemical Code (Shaughnessy Number). These are appended with the name source "NLM."

Drug names and pesticide names are now qualified with an abbreviation of the names of their "official" source compendia when these are available. The most common abbreviations are:

Drugs

USAN	United States Adopted Name
INN	International Nonproprietary Name
BAN	British Approved Name
DCF	Denomination Commune Francaise (French approved nonproprietary name)

Pesticides

ANSI	American National Standards Institute
ISO	International Organization for Standardization
BSI	British Standards Institution

The abbreviations are following the name enclosed in square brackets, and are useful in choosing names for further searching in a file like TOXLINE, since generic names are usually used in such a file in preference to trade names. Figure 4 contains examples of the synonym fields for two records with names annotated in this manner.

CLASSIFICATION CODE (CC) FIELD

In addition to pharmacologic and/or therapeutic category data from *USAN and the USP Dictionary of Drug Names*, Classification Code data from the RTECS files are now carried in CHEMLINE records, with the source RTECS appended. All data are in alphabetical order within the field. The CC data for Ceftizoxime Sodium follows as an example:

CC	- Antibacterial [USPDDN]
CC	- Drug [RTECS]
CC	- Reproductive data [RTECS]

All data are directly searchable up to the first square bracket, and by individual word in the CC field as well. A listing of RTECS Classification Codes may be found in the RTECS chapter of the *Online Services Reference Manual, 1986*. Users are cautioned that RTECS CCs such as "Reproductive data" and "Tumor data" denote the presence of either positive or negative data in the RTECS record, and do not necessarily indicate that a compound is associated with reproductive or carcinogenic toxicity. In that respect, they can be viewed as an example of a data "locator", rather than a category.

RING DATA (NR,RS,RE,CL) FIELD

Ring data were added to over 4,500 records in this regeneration. This category is now current through the third update to CHEMLINE in 1984. The effort of adding ring data is now being phased out, and it is not planned to add more such data after the next regeneration. Based on a recent survey of users, it was decided that it would be best to concentrate available resources on augmenting capabilities useful in finding individual chemical records. The ring data now in the file, however, have utility in searching and will be retained.

LOCATOR (LO) FIELD

All records were updated with the latest Locator value. This includes a complete update to the TSCAINV locator, which denotes the presence of a substance on the newest public version of the EPA TSCA Inventory. These data were not available for the last regeneration of CHEMLINE.

SUMMARY

This regeneration of CHEMLINE provides users a variety of new data to identify substances, categorize them, and increase the chance of finding pertinent data in other NLM files. Over 140,000 records were enhanced with data beyond the basic data which are made available to NLM through its agreement with CAS, as compared to approximately 58,000 records in 1986. This process will continue in 1987 and 1988. Many of these improvements have been based upon the results of a survey of CHEMLINE users made in 1985. We would welcome user comments on these new types of data, as well as suggestions for further improvements.

VERSION 2.0

[Editor's Note: Each month the NLM Technical Bulletin features a column of questions/answers concerning GRATEFUL MED. Contributions for this column will be appreciated.]

DOWNLOADING WITHOUT MeSH VOCABULARY

It is possible to download citations from MEDLINE and CATLINE with or without the MeSH Headings (MH). After you have entered your search topics on the INPUT screen, GRATEFUL MED will ask, "OK TO GO ON TO SEARCH (Y/N/*)?"

- If you enter Y, the downloaded citations will include MeSH headings.
- If you enter an asterisk (*), the downloaded search results will not include MeSH headings. By excluding MeSH headings you can reduce the cost of your search; however, the relevancy program which suggests MeSH terms cannot be utilized.

TRANSFERRING REFORMATTED SEARCH RESULTS TO PAPER OR DISK

In addition to reviewing the results of your search on your screen, you can elect to print the reformatted citations at your printer or transfer them to another file, even on another disk.

Following your search, GRATEFUL MED asks, "DO YOU HAVE A PRINTER AND WANT TO PRINT (Y/N/F)?"

- If you enter Y, your search results will be displayed on your screen for you to review and the citations which you decide are relevant will print on your printer.

- If you enter N, each citation retrieved will only be displayed on your screen for you to review.

- If you enter F, the search results that you decide are relevant will be moved to a file which you designate when prompted with "FILE NAME ?" Designate a drive and a "subject-oriented" name (up to 8 characters), including a file name extension if you wish. For example:

B:POLIO.GM
C:TONSIL.TXT

If you do not designate a drive, the file will be written to the drive running GRATEFUL MED. If you do not provide a file name extension, none will be added.

Next, you will be prompted with, "NEW FILE (Y/N)?"

- If you answer Y, a new file will be created.
- If you answer N, the citations will be appended to the end of the existing file with that name.

NOTE: While reviewing citations, hitting the ESCape key will allow you to stop the review process and begin another GRATEFUL MED option.

GRATEFUL MED users should also note the following articles and/or features in this issue:

TECHNICAL NOTES, p.3.

The TOXNET Gateway

Bruno M. Vasta
Philip Wexler
Dalton Tidwell
Toxicology Information Program, SIS

The Division of Specialized Information Services is pleased to announce the availability, as of May 18, 1987, of the TOXNET "Gateway." This user-transparent switching feature provides access between TOXNET's toxicologically-oriented files and the ELHILL databases. Starting in any TOXNET file users may now switch to ELHILL databases simply by using the FILE command. For example, a user searching HSDB would use the command FILE MEDLINE to be automatically logged onto ELHILL's MEDLINE.

The TOXNET software, working through a PC-compatible microcomputer, dials a Washington, D.C. area TYMNET node, establishes a link to ELHILL, enters the appropriate User ID code and password, and logs into the requested database in ELHILL. Although TYMNET handles the Gateway, users are able to access TOXNET using any of their preferred modes (TELENET, TYMNET, or Direct Dial). Once the Gateway is established, users can search ELHILL readily, switching back and forth between databases. After the ELHILL session is completed, the standard STOP Y command will return users to the exact line last displayed in the TOXNET session. Users must return to TOXNET before logging off the entire NLM system; this is accomplished with another STOP Y.

There are 8 ports dedicated to the TOXNET Gateway itself plus the usual 8 TELENET and 8 TYMNET ports into TOXNET. Each time the Gateway is used, a virtual circuit is created whereby two ports are in use: one for accessing TOXNET, and one for the connection to ELHILL through the TYMNET link. TOXNET software keeps track of time spent both in ELHILL and TOXNET. Estimated online time and charges, as always, are displayed in conjunction with each logoff.

It should be pointed out that the Gateway is presently unidirectional. Users must start in TOXNET, move into ELHILL and return to TOXNET. ELHILL does not offer access to TOXNET at this time. Users beginning their searches in ELHILL databases must still logoff ELHILL and onto TOXNET before searching a TOXNET file.

With the transfer between TOXNET and ELHILL now simplified, users must pay special attention to which files they are searching and remember to use valid commands and mnemonics. For example, the PRT FULL command is not recognized in TOXNET while the PRT HITS is not valid in ELHILL. A number of informative ERROR messages will shortly be in place in the TOXNET system to alert users to the nature of mistakes they might make. A separate article discussing realistic search applications for the Gateway is forthcoming in a future *NLM Technical Bulletin* issue.

The TOXNET Gateway is the first step towards facilitating cross-file searching and printing between NLM's ELHILL and TOXNET systems. Moving search results back and forth, saving, merging and sorting data, in addition to implementing post-processing capabilities are features now being planned for TOXNET.

TOXLINE

Continued from page 1.

Pharmacists (International Pharmaceutical Abstracts) -- have necessitated continually increasing the cost of accessing TOXLINE.

The subfiles for which royalty charges must be paid will be included in two new files named TOXLIT (Toxicology Literature from Special Sources) and TOXLIT65. TOXLIT is expected to contain publication years 1981 forward and TOXLIT65 will contain 1965-1980 publication years. The dates of coverage are still tentative.

The expected target date for the regeneration is August 1. At that time, the current TOXLINE and its backfiles will be segmented into the three files outlined in Figure 1.

The new TOXLINE file is expected to include all years of coverage for its respective subfiles and will include MeSH headings in their MEDLINE format as a major new feature of the Toxicity Bibliography (TOXBIB) subfile. NLM is regenerating all TOXBIB citations from MEDLINE to get the current 1987 MeSH. NLM users familiar with MeSH thus will be able to employ MeSH searching in formulating TOXLINE searches, perhaps using such search retrieval to identify Text Words to be used in retrieving from other portions of the TOXLINE or TOXLIT files that do not carry MeSH headings.

NLM is planning to add new subfiles to the non-royalty TOXLINE in order to increase the scope and coverage of that file. NIOSHTIC, a bibliographic file produced by the National Institute for Occupational Safety and Health (NIOSH), is being processed now and is expected to be included as a TOXLINE subfile during the regeneration. NIOSHTIC covers current journals in fields related to occupational health and safety, as well as NIOSH publications and references identified in the creation of NIOSH documents.

The Library believes that the proposed segmentation will better serve the needs of the NLM user community. The restructured files will of course necessitate a new pricing structure, which is currently being developed. With the new TOXLINE and TOXLIT files, NLM users will still have access to the full range of toxicology-related bibliographic citations, but will now have options for significantly less expensive access to much of the information. Performing search strategy formulation and refinement in the lower priced file coupled with use of ELHILL software features such as SAVESEARCH also will allow more cost-effective access to the royalty-based files.

Watch for future *NLM Technical Bulletin* articles that will provide more details on file content and cost restructuring, new TOXLINE subfiles, and search strategy suggestions as the regeneration date moves closer.

Monthly Search Hint:

EXPLODE versus ALL

Janice Contini
Pacific Southwest Regional
Medical Library Service

[Editor's Note: Adapted from an article that originally appeared in the Pacific Southwest Regional Medical Library Service Newsletter, 1986 Nov-Dec; (162).]

MEDLINE is a database whose subject searching structure is built around the *Medical Subject Headings* (MeSH). To capitalize on this structure, that is, to get the best possible information from MEDLINE, the searcher must understand the advantages of the EXPLODE capability. The searcher also must realize the implications of using ALL, another search instruction.

EXPLODE

The MEDLARS system has an EXPLODE capability for MeSH headings. When the searcher uses this capability, the system retrieves postings for the MeSH heading entered following the EXP and retrieves postings for each MeSH heading indented under that term in the tree structure hierarchy. Thus, when the searcher enters EXP SPORTS, the postings for SPORTS and for each of its specific indentions are retrieved (Figure 1). The computer automatically processes the terms as if the searcher had entered each one connected with the Boolean operator OR.

ALL

Some searchers substitute the word ALL for the EXPLODE capability. However, ALL is no substitute. The computer does not

understand the concept ALL in the same way humans do. ALL bypasses the MeSH structure of the system, while the EXPLODE capability uses the system's structure. When a searcher enters ALL SPORTS, the computer retrieves sports as a MeSH heading and as a Text Word (Figure 2). The computer simply goes to the database index, matches letter by letter, and retrieves all matches no matter what the field. Some searchers truncate when using ALL. In that case, ALL SPORT: is entered. The computer goes to the database index and retrieves all entries beginning with "sport" no matter what the field. Authors and journal title abbreviations would be retrieved as well as Text Words and MeSH headings (Figure 3). However, none of the specific sports indented under SPORTS in the tree structures would be retrieved since those terms do not begin with the letters s p o r t. (Compare Figure 3 to Figure 1.)

WHICH METHOD IS BEST?

USING EXPLODE

MEDLINE searchers should use the EXPLODE capability to take advantage of the strength of the MeSH controlled vocabulary. The indexing of MEDLINE is excellent. Searching with MeSH headings in MEDLINE allows for comprehensive, precise, and flexible searching.

MeSH headings can be weighted (using the asterisk) to indicate a central topic in the article. Specific aspects as well as the general concept are appropriate and necessary for comprehensive retrieval.

Suppose information concerning the effect of participation in sports on coronary disease is desired. One facet of the question is sports and the other facet is coronary disease. The MeSH heading for sports is SPORTS. Indented under SPORTS are nineteen MeSH headings for particular kinds of sports (Figure 1). All the headings would also be appropriate. For the second facet there is a MeSH heading CORONARY DISEASE. There are ten MeSH headings indented under CORONARY DISEASE representing specific

types of coronary disease (Figure 4). All of those headings are also appropriate. The MeSH headings CORONARY CIRCULATION and CORONARY VESSELS would be appropriate as well.

The search strategy in the current MEDLINE database using MeSH headings and EXPloding those headings which have indented terms under them is shown in Figure 5.

USING ALL

What would be different, if anything, about the results of the search if ALL were substituted for EXP for the two terms which can be EXPLODED?

Figure 3 shows that some MeSH headings will be retrieved using ALL SPORT:, while the nineteen MeSH headings for types of sports would not be retrieved. ALL CORONARY DISEASE would retrieve the MeSH heading CORONARY DISEASE and not any postings to MeSH headings for specific types of coronary disease (Figure 6). Note in Figure 6 what is retrieved, and compare that to Figure 4.

The search strategy in the current MEDLINE database substituting ALL for EXP is shown in Figure 7. Note the smaller number

of postings for ALL SPORT: and for ALL CORONARY DISEASE.

The searcher who EXPLODED the MeSH headings retrieved a total of sixty-four records, while the searcher who used ALL retrieved only forty records, many of which were not related to the concept for which the searcher was looking.

For purposes of illustration, the scope of the question in this article is narrow. In reality, the idea of exercise would be appropriate to include with sports. Rather than limiting the effect of exercise or sports to coronary disease, one might be interested in broadening the idea to include the entire cardiovascular system.

The first facet would include EXPLODing both SPORTS and the MeSH heading for exercise, EXERTION. The second facet would include the pre-explosions for CARDIOVASCULAR SYSTEM and CARDIOVASCULAR SYSTEM DISEASES as well as the EXPLODE of CARDIOVASCULAR SYSTEM PHYSIOLOGY (NON MESH). (For a comprehensive explanation of pre-explosions, see the *Online Services Reference Manual, 1986*, section 4.7.2.)

The above strategy allows for comprehensive retrieval on the subject in MEDLINE by using the strength of the database.

Notification of New Rates for MEDLARS® Databases

Lois Ann Colaianni
Associate Director, Library Operations

Henry M. Kissman, Ph.D.
Associate Director, Specialized Information Services

At its May 1987 meeting, the NLM Board of Regents reviewed the MEDLARS costs and charges. Based on this review, the Board recommended changes in the charges for online access and offline pages. This article serves as notification required in NLM's Memorandum of Understanding of an increase in online charges and offline page charges effective October 1, 1987. The new NLM Online Pricing Algorithm Charges chart may be found in Appendix A.

In addition, NLM is making several changes to some databases that will substantially lower their search costs. Online and page costs for TOXNET® files will be reduced to align these with the costs for the other MEDLARS databases. RTECS®, now an ELHILL® file, will be moved to the TOXNET system in October; its online and page costs will be reduced to approximately the general MEDLARS level at that time. Furthermore,

Continued on page 13.

Technical Notes

Whenever applicable, the heading of each Technical Note includes a reference to the section of the Online Services Reference Manual 1986 that is considered most relevant to the item being discussed, e.g., (Manual 4.7.2). Users should keep in mind that the item may pertain to other sections as well.

NLM USE EXCEEDS 10,000 CODES

NLM is pleased by the number of new MEDLARS code applications it receives each month. Recently, a milestone was reached as the MMS staff processed its 10,000th User ID code.

In September 1984, when NLM introduced its course to train librarians to teach "The Basics of Searching MEDLINE" to their faculty and staff, there were 3,988 domestic and foreign codes. A year later, primarily as a result of the Health Professional Training program, the number rose to 5,253. By the end of September 1986, total codes rose to 8,223 mostly as a result of the introduction of GRATEFUL MED™. Seven months later there were 10,200 codes: 8,800 domestic and 1,400 non-U.S.

TOXNET DOWNTIME CHANGE

The TOXNET computer is no longer down for a system copy on the third Thursday of every month from 9:00 pm to 1:00 am ET as previously announced in the October 1985 *NLM Technical Bulletin*.

Please be reminded, though, that a system copy is performed on the TOXNET system between 10:00 pm and approximately

11:30 pm ET, Monday-Friday. TOXNET is unavailable during these hours.

CANCERPROJ®, POPLINE USING 1987 MESH®

CANCERPROJ became available for searching using 1987 MeSH in February 1987 when year-end processing of the file was completed.

Year-end processing of POPLINE to reflect 1987 MeSH vocabulary changes was completed in mid-April.

PHONES LIST

Enclosed with this issue of the *NLM Technical Bulletin* is an updated list of telephone numbers which can be used to access the NLM computers.

2400 baud access instructions were issued as Appendix A of the March *NLM Technical Bulletin*. Both the NLM ELHILL mainframe computer and the TOXNET mini-computer can be accessed at 2400 baud.

CHANGE OF ADDRESS

Beginning with this issue of the *NLM Technical Bulletin* a change of address form is provided on the last page. This form should be completed and returned to the MEDLARS Management Section if either the Administrative/*NLM Technical Bulletin* address or the Billing address have changed for a MEDLARS User ID Code. Please note that the Administrative/Bulletin address should be that of the primary searcher or someone who will route the *NLM Technical Bulletin* to interested associates who search MEDLARS databases.

Please access FILE INFORM and type NEWS to see the most recent news items online!

Changes in NLM's Online Update Program

Patricia C. Buchan
NLM Online Services Training Coordinator
MEDLARS Management Section, NLM

Traditionally in the fall of each year, the National Library of Medicine has prepared the Technical Resource Persons (TRP's) from the Regional Medical Libraries to present Annual Online Updates throughout the U.S. During the past several years, because of the unprecedented increase in the number of online searchers, only a small percentage (25%) of MEDLARS searchers have been able to take advantage of attending the in-person Updates. Restrictions such as time, staff coverage, budgets, and geographic distance have prohibited wide-spread attendance at the Updates which are held in numerous sites throughout the seven Regions. In addition, evaluations received from those who were in attendance at the Online Updates, indicate that, although searchers believe it is necessary to receive updates regularly about system changes, they do not feel the current method of presentation is of particular value.

With these factors in mind, and in an attempt to reach as many searchers as possible, the National Library of Medicine plans to replace the in-person Online Updates during the Fall of 1987 with an alternative method of providing updates for the online searcher. A special issue of the *NLM Technical Bulletin* will be devoted to the information that would be conveyed in the Online Updates. The special Update Issue will summarize major changes occurring during the previous year and highlight anticipated changes. It will also serve as a document that can be used as a reference source for the online searcher. In the months following this Update Issue, which will appear sometime during the December through February time period, subsequent issues of the *NLM Technical Bulletin* will include articles that will expand

upon specific items which have been announced in the Update Issue.

The benefits of using a document to deliver the Update information include:

A. The special issue will reach every MEDLARS Search Center as well as each individual holding a User ID Code.

B. The preparation of the Online Update by the NLM Staff has traditionally been performed during the summer months of the year. This has not always been the most advantageous time to prepare the information due to the fact that the "new" system is not fully operational until mid-December. Therefore, many announcements and projections would occur without complete testing of new features. With the new method of presenting the Update information, testing of new or revised features can be much more accurate and reflect what the online searcher can simulate.

C. The Technical Resource Persons will now be available to develop, plan, and present other types of educational programs which had previously not been feasible because of their heavy fall travel schedule.

D. The special Update Issue will be formatted differently from the traditional Online Update Packet. More descriptive articles with numerous search examples will be used to present fully new features with the slant on how changes/additions will impact the online searcher.

This new Update plan is designed to be responsive to the comments of attendees at the Online Updates and to the needs of all searchers including those who, in the past, have been unable to attend Online Updates. During the next year, this method of presenting Update information will be closely monitored and evaluated by the NLM Training Staff in conjunction with the Regional Online Centers' Training Staffs and alternative methods will be studied and appraised for their usefulness in providing annual Update information.

Using the TOXNET Gateway

Philip Wexler
Toxicology Information Program
Specialized Information Services

The TOXNET Gateway to ELHILL was made available to NLM users on May 18, 1987. Its operation and basic features were described in the May 1987 issue of the *NLM Technical Bulletin*. This article illustrates how the Gateway could be used to facilitate online searching for information related to an industrial health problem.

Let's say you are running an HSDB® search on the respiratory effects of chromium compounds in workers. Your company is just starting to manufacture chromium products and the Occupational Health Director has asked you to provide some background data and documentation to help set up a monitoring and surveillance program. Expecting to get data primarily on the lung,

you are surprised when preliminary HSDB online search results indicate the nose as a site highly susceptible to injury by chromium. You decide to interrupt your HSDB session to search for some recent articles reviewing in greater detail the potentially ulcerative effects of chromium on the nose, particularly the nasal septum. Presenting your interim findings to the Occupational Health Director, you are further instructed to search for other compounds which tend to injure the nasal septum. Following (Figure 1) is the display of a search session that might be used to tackle such a problem. Figure 2 presents a summary of the search session.

The user may continue broadening or restricting the HSDB search until satisfactory results are achieved.

The Gateway permits a single command transfer to an ELHILL file, such as TOXLINE. Once there, the user may switch back and forth among ELHILL files using the standard FILE command. The return trip to TOXNET is similarly quick and simple. We would appreciate hearing of other situations where the Gateway has proved helpful.

HTOX - Effects on the upper respiratory tract have been observed in
workers in chromium-related industries. The major effects of
chromium on this system include ulceration of the nasal septum,
with subsequent perforation, and chronic rhinitis and
pharangitis. Early studies indicated that approximately one-half
to four-fifths of the workers in chromate plants had perforated
nasal septa, at levels of exposure that approached 1 mg/cu m.
Subsequent work indicated that chromic acid levels exceeding 0.1
mg/cu m also caused perforated septa in some workers. /Chromates/

VERSION 2.0

[Editor's Note: Each month the NLM Technical Bulletin features a column of questions/answers concerning GRATEFUL MED. Contributions for this column will be appreciated.]

I did some MEDLINE searches a few months ago using GRATEFUL MED and now I would like to see if anything has been written more recently on these subjects. Is there a way to do searches to just get new citations?

Yes, this is called updating your search. Each month NLM updates MEDLINE with over 25,000 references. You can restrict your search to citations added during certain months by using a field called the Entry Month. The Entry Month is a four-digit number (YYMM) corresponding to the monthly issue of the printed *Index Medicus* in which the same citation appears. So by including Entry Months you can update searches done previously.

Entry Month values in MEDLINE are a month ahead of the calendar month the citations are actually added to the database. Citations added to MEDLINE in July have an Entry Month of 8708 because these citations will be printed in the August issue of the *Index Medicus*.

In order to perform an update search you must first enter your search on the INPUT Screen the same way you did initially. On any blank SUBJECT WORDS line, enter a slash followed immediately by the Entry Month values for the months which have passed since your initial search. For example, if in September you decide to update a search you did in July you would reenter the search on the INPUT Screen and on a blank

SUBJECT WORDS line you would enter:

/8709 OR 8710

Note that if you are using more than one Entry Month you will need to use the connector, "OR."

The next MEDLINE updates are scheduled for July 5 (8708) and August 1 (8709).

The UPDATE schedule for the upcoming year is published in the October issue of the *NLM Technical Bulletin*. If you have any questions about which Entry Month(s) you should include in your search, please call the Service Desk. Be ready to tell us the date you performed the search that you want to update.

Once the update search is completed you may either print the results or transfer them to a file using the file transfer capability described in last month's column.

Example:

DO YOU HAVE A PRINTER AND WANT TO PRINT (Y/N/F)? F
(Enter "F" to indicate that you want the results to be transferred to a file.)

FILE NAME? B:INSULIN.DOC
(Designate the drive, and enter the name of the file that contains the results of the initial search, including a filename extension if necessary.)

NEW FILE? (Y/N)? N
(Enter "N" since the file is not new.)

The results of this update search will be appended to the end of the file containing the results of the initial search.

GRATEFUL MED users should also note the following articles and/or features in this issue:

NOTIFICATION OF NEW RATES FOR MEDLARS DATABASES, p.1.

TECHNICAL NOTES, p.3.

NLM Trademarks Databases and Services

What does it mean to have a registered name or trademark? Examples used by NLM are GRATEFUL MEDTM and MEDLINE[®].

The TM alerts the public that the name has been temporarily granted protection by the U.S. Patent Office while trademark rights are being claimed. The [®] notifies the public that the claimed name has been officially accepted and registered as a trademark by the U.S. Patent Office. In both cases, the marks protect these names from improper and/or

fraudulent use by others.

There have been recent cases in which registered trademarks such as NLM's MEDLINE, have been used by companies to refer to their own services or products. Improper use of a registered trademark results in confusion and is, in any case, illegal. If you are aware of improper use of any of NLM's protected names, please notify the Chief of the Bibliographic Services Division, NLM.

The following list of NLM databases and services are officially registered as trademarks with the U.S. Patent and Trademark Office or are currently protected while trademark rights are being claimed.

Notification of New Rates

Continued from page 1.

TOXLINE[®] will be reconfigured into three files on ELHILL containing non-royalty data in a file still called TOXLINE, and royalty data in two files called TOXLIT and TOXLIT65. TOXLINE costs will be reduced

to the general MEDLARS level. For the other two files NLM will continue to collect the required royalties. The TOXLINE changes will become effective in August. Royalties also will continue to be collected for the CHEMLINE[®] database.

No changes are being made in the charges for leasing the MEDLARS databases.

Monthly Search Hint:

SAVE/SAVESEARCH and STRINGSEARCH: Update

Saving a search is a valuable and cost-effective way to retain search strategies for use in the future and in other databases. Two ways to save a search are the commands SAVE and SAVESEARCH. SAVESEARCH can be used prior to entering the search and SAVE can be used immediately after the search has been entered. Please see Section 5.3 in the *NLM Online Services Reference Manual, 1986* for a more detailed description of SAVE/SAVESEARCH procedures and features, including examples.

Recently, (March 1987) NLM made certain changes to the ELHILL software that compensated for some previously encountered problems in SAVE/SAVESEARCH. These improvements are described below:

- One or more STRINGSEARCHes should execute successfully within a SAVED search even when that SAVED search is embedded within the strategy of other SAVED searches. NLM is still advising searchers not to use STRINGSEARCHing in SAVED searches when a direct Boolean search is better, e.g., "AND NOT FOR (LA)" is almost always more cost- and computer-efficient than "TS (LA) :ENG:".

- In the past, it was necessary for users to maintain ten percent free space in the area set aside for SAVED searches. This was to

prevent overwriting data if the area filled up. It is no longer necessary to maintain this free space although it's still a good idea to do routine housekeeping of your SAVED searches and remove those no longer needed.

Searchers may now annotate Parts 5.3.8.2 and 5.3.8.3 in their *Online Services Reference Manual, 1986* as no longer needed.

However, one complex situation is still known to cause problems in SAVE/SAVESEARCH. This condition is the stacking of SAVE REMOVE commands on one line. It is important to remove each SAVED search separately, one on a line, or one per USER cue. NLM has never endorsed the practice of multiple commands on one line of input because the order of precedence in the software executing these instructions is complex and not fully documented. More importantly, enhancements to the ELHILL software do not allow for command stacking.

There are two messages that users should watch out for when saving searches. These are found in Figure 1.

If the first message is received during a search it is known as a RESTART. It indicates that there is something preventing the successful execution of the SAVED search and the strategy should be revised, e.g., convert a STRINGSEARCH to a direct Boolean search. Do not execute the search again. Please call MMS for help.

The second message at login indicates that the user's area for SAVED searches and other code-specific information such as password and stored address must be rebuilt. This must be done by MMS staff and in most cases, all SAVED searches must be removed and will need to be re-**SAVED** by the user.

*Average searcher charges per hour may differ according to computer resources used and citations and characters printed online.

**Includes royalty charges of \$68.60 per connect charge and \$0.21 per citation charge for TOXLIT and its Backfile (TOX65). Following the TOXLINE reconfiguration August 1, 1987, August and September prices for both TOXLIT and TOXLINE will be somewhat lower than shown here.

***Includes royalty charges of \$54.00 per connect charge and \$0.25 per citation for CHEMLINE.

On October 1, NLM will increase its charges for pages printed offline.

NLM OFFLINE CHARGES TO DOMESTIC USERS^{1/}

Pages	Per Page
MEDLINE and other databases	\$0.25
TOXLIT	0.92 (Includes \$0.67 royalty charge per page)
CHEMLINE	1.53 (Includes \$1.28 royalty charge per page)
TOXNET (HSDB, RTECS or CCRIS)	0.25
Offsearches	Per File
All Databases	\$1.00 (plus page charges)
Automatic SDI Searches	
SDILINE, HEALTH, AVLINE CATLINE, CANCERLIT, POPLINE, TOXLINE	1.00 (plus page charges)
TOXLIT	4.00 (plus page charges; includes \$3.00 royalty charge)

The September 1987 issue of the NLM Technical Bulletin will contain an updated schedule of charges for each database.

^{1/}Non-U. S. online users incur charges under the online pricing algorithm and are charged \$3.00 extra on the connect charge portion and \$0.10 extra per offline page, and are not charged amounts designated as royalties. These royalties are negotiated separately with and paid by the online International MEDLARS Centers directly to the database producers for TOXLIT, TOXLIT65, and CHEMLINE and not to NLM.

TOXLINE® Regeneration August 1

Jeanne C. Goshorn

Chief, Biological Information Services Section, SIS

As announced in a previous article, entitled "Preview: TOXLINE Regeneration Plans" in the May 1987 *NLM Technical Bulletin*, NLM will provide the newly regenerated TOXLINE on August 1, 1987, with a segmentation different from the current front file/back file structure. Instead, segmentation will be by subfile. All of the subfiles that do not incur royalty charges will be in a file still called TOXLINE, which will cover all publication years for these subfiles. The other subfiles that do require royalty charges will be placed into two new files, TOXLIT (Toxicology Literature from Special Sources), 1981 - forward, and TOXLIT65, pre-1965 - 1980. The TOXLINE file name alias is TOX. TOXLIT and TOXLIT65 do not have name aliases. CHEMLINE® will be regenerated on or about August 1 to support this new TOXLINE configuration with new Locator (LO) values. The Locator (LO) values of TOXBACK76 and TOXBACK65 will be deleted. The Locator (LO) values of TOXLIT and TOXLIT65 will be added.

Continued on page 6.

Technical Notes

Whenever applicable, the heading of each Technical Note includes a reference to the section of the Online Services Reference Manual 1986 that is considered most relevant to the item being discussed, e.g., (Manual 4.7.2). Users should keep in mind that the item may pertain to other sections as well.

LABOR DAY HOLIDAY SCHEDULE

The NLM computer will be up on a non-guaranteed basis on Monday, September 7, 1987, Labor Day. Non-prime rates will be in effect all day and the MEDLARS® Management Service Desk will not be staffed. DOCLINE® will also be up on a non-guaranteed basis on Monday, September 7, and the DOCLINE Service Desk will not be staffed. The TOXNET® computer system status is always guaranteed with non-prime rates in effect on all holidays. Please see the October 1986, *NLM Technical Bulletin*, Appendix C, for the complete 1987 holiday schedule.

SPECIFYING USER ID CODE ON CORRESPONDENCE

Please include your MEDLARS User ID code on all correspondence directed to the National Library of Medicine (NLM) or on payments or inquiries sent to the National Technical Information Service (NTIS). This will help facilitate resolution of questions and posting of payments.

TOXLINE AUTOMATIC SDI SERVICE

Following the regeneration of TOXLINE August 1, users who currently receive automatic SDI service on the TOXLINE database will automatically receive SDIs from both TOXLINE and TOXLIT for the 8708

(EM) and 8709 (EM) updates with no additional execution charge. Enclosed with the retrieval for the 8707 (EM) update will be a letter explaining the changes and a revised NLM Automatic SDI Request Form, which should be used to notify MMS on which of the files (or both) SDI service is desired. If MMS does not hear from users before October 14 (the date of the 8710 (EM) update), it will assume that service against both files at a total execution charge of \$5.00 per search (plus page charges) is desired. The \$5.00 is distributed as follows: \$1.00 execution fee for TOXLINE; \$1.00 execution fee for TOXLIT; and \$3.00 royalty fee for TOXLIT. Please refer to the TOXLINE article in this issue as well as the article in the May *NLM Technical Bulletin* for more information on the TOXLINE regeneration.

RTECS® MOVING TO TOXNET SYSTEM

RTECS, currently an ELHILL® file, will be moved to the TOXNET system in October. It will be accessible only on the TOXNET system and will no longer be available on the ELHILL system at that time. Charges for online access and page costs will be the same as for HSDB® and CCRIS files on the TOXNET system.

Remember that TOXNET system charges will be reduced to approximately the general MEDLARS level (MEDLINE, CATLINE®, CANCERLIT®, etc.) in October. Please see the article in the June 1987 *NLM Technical Bulletin* for more information on prices.

CHEMLINE REGENERATION

CHEMLINE will be regenerated on or about August 1 to support the new TOXLINE configuration with new Locator (LO) values. The Locator (LO) values which refer to TOXLINE before regeneration will be deleted. TOXBACK76, TOXBACK65, and CANCERPROJ® locators will be deleted. TOXLIT and TOXLIT65 will be added. The CANCERPROJ locator is being deleted

because the file has not been updated for a long time, and NLM expects that the CANCERPROJ database will be discontinued in the next Fiscal Year. The August *NLM Technical Bulletin* will contain more details on the National Cancer Institute's plans for the CANCERPROJ database.

TOXLINE (AI) TAG IN SERLINE®
(Manual 11.3.2)

An Abstracting and Indexing (AI) tag is being added to SERLINE records for the 1545 journals most frequently cited in TOXLINE. This new AI tag contains the value "TOX", and is directly searchable in the same way as all other AI tags. To date, the SERLINE file contains 1417 titles with the AI tag of "TOX". 1300 of these titles were already in SERLINE; 117 were recently added. The 117 titles are not acquired by NLM because they are out of scope for the collection. They have a call number value of "TOX". The remaining 128 titles will be added to SERLINE as bibliographic authority work is completed. All of this work was done prior to the TOXLINE reconfiguration expected online August 1. Please refer to the article in this issue concerning the TOXLINE regeneration.

Therefore, SERLINE titles labelled "TOX" in the AI field may appear in the new TOXLINE file, the new TOXLIT files, or both.

2400 BAUD ACCESS TO TOXNET®
(Manual 25.2)

TOXNET is now available at 2400 baud through both the TELENET and TYMNET networks. Instructions for accessing TOXNET and other NLM files at this speed appear in Appendix A of the March 1987 *NLM Technical Bulletin*. To access TOXNET through TELENET, use the TOXNET computer address of c 301 633 instead of the ELHILL computer address c 301 20 as is illustrated in the instructions.

TOLL-FREE NUMBERS FROM DIRLINE

The Specialized Information Services is preparing a pocket-sized publication, *Health Hotlines* which lists 800 numbers from the DIRLINE file, with the organization's name and address. *Health Hotlines* will be available in mid-September. To obtain a copy, please send a self-addressed label to: Joan Stonic, National Library of Medicine, Specialized Information Services, Building 38A, Room 3N305, 8600 Rockville Pike, Bethesda, MD 20894.

LIST OF SERIAL TITLE WORD ABBREVIATIONS

The National Library of Medicine frequently receives requests from searchers who want to know how we create journal Title Abbreviations (TA). Our authority is the *List of Serial Title Word Abbreviations* which includes words and their abbreviated forms used for the establishment of abbreviated serial titles. The abbreviations are based on the International Standard ISO 4.

The *List* is available in hard copy and on microfiche. The *List of Serial Title Word Abbreviations, 1985* (hardcopy edition) is an irregular publication containing over 28,000 words which have been abbreviated from 1974 through 1984. Two hardcopy supplements are available containing words abbreviated during 1985 and 1986 respectively. The *List of Serial Title Word Abbreviations* (microfiche edition) is an annual publication on A6 (1:48) microfiche. It contains approximately 31,000 words which have been abbreviated from 1974 through 1986.

Ordering information is as follows:

List of Serial Title Word Abbreviations

Hardcopy edition, 1985 (covers years 1974 - 1984)
ISSN 0259-000X, 510 francs

Hardcopy Supplements:

1985 Supplement, ISSN 0259-0018, 135 francs

1986 Supplement, ISSN 0259-0018, 135 francs

Microfiche edition (covers years 1974-1986)
ISSN 0258-9990, 470 francs

Orders may be sent to: ISDS IC, 20, rue Bachaumont, F-75002 PARIS (France), Telex: SERIALS 680047F, Telephone: 33 (1)42 36 73 81 or 33 (1)45 08 98 37

MEDLARS MINI-MANUAL

Users requesting the MEDLARS

Mini-Manual from the British Library should make checks payable to The British Library. If users have any comments about this tool, please feel free to contact Peter Dale at the British Library, Bibliographic Services, 2 Sheraton Street, London W1V 4BH, UK. For more information on the *MEDLARS Mini Manual* refer to the article in the March 1987 *NLM Technical Bulletin*.

CLINPROT® INDEX TERM LISTING

The CLINPROT Index Term listing for June 1987 is now available. It may be requested by writing to the MEDLARS Management Section. Please include a self-addressed label with your request. No return postage is necessary.

This is an updated and revised list of NLM databases and services that are officially registered as trademarks with the U.S. Patent and Trademark Office or that are currently protected while trademark rights are being claimed.

TOXLINE Regeneration
Continued from page 1.

Changes to the subfiles that comprise the new TOXLINE database include: (1) the addition of NIOSHTIC, a file of bibliographic references on health and safety produced by the the National Institute for Occupational Safety and Health (NIOSH), and (2) the addition of Poisonous Plants Bibliography, a subfile prepared especially for TOXLINE on the toxic effects of poisonous plants as reported in literature prior to 1976. More recent information on this topic is adequately covered in other TOXLINE subfiles. Another new subfile, TSCATS, which contains references to submissions to EPA's Office of Toxic Substances under the Toxic Substances Control Act (TSCA), is currently being developed and will be added to TOXLINE some time in the Fall. Two older subfiles, which come from collections no longer being updated, the Hayes File on Pesticides with older references on human exposure to pesticides, and the Toxic Materials Information Center File, will be dropped from TOXLINE during the regeneration.

NEW SEARCH FEATURE

A new search feature also will be implemented to allow searching on the alphabetic characters that begin each Secondary Source Identification (SI) field in the TOXLINE/TOXLIT databases. This will allow accurate searching in TOXLINE/TOXLIT for citations that come from a specified subfile. SI's also will continue to be unique identifiers for TOXLINE/TOXLIT records and will still be directly searchable in their entirety. Because of this alteration, there will be some changes in the acronyms by which TOXLINE/TOXLIT subfiles are known. The new acronyms - those abbreviations found in the SI field of each subfile - are listed in Figure 1 for each of the new TOXLINE/TOXLIT databases.

Toxicity Bibliography (TOXBIB), the subfile of toxicity-related information taken from MEDLINE, will now comprise the major

portion of the new TOXLINE file. Therefore, we will provide MeSH® indexing on this subfile, complete with full MeSH searching features. The MeSH Headings will still be placed in the TOXLINE Keyword (KW) field to facilitate Text Word searching across the entire TOXLINE file, but now a new field, MeSH Heading (MH), will be present on all TOXLINE records from the TOXBIB subfile. The terms in this field will be directly searchable as MeSH Headings, but they must be qualified with (MH) for searching in TOXLINE. Search terms entered without qualification will be searched in every TOXLINE field except the Keywords (KW) and MeSH Headings (MH) fields. Use of MeSH search features such as explode and subheadings will be allowed (and will cause the search term(s) to be searched in the MH field without the qualification of (MH)). In addition, the TOXLINE PRINT FULL format will be changed to include MeSH Headings.

For the regenerated TOXLINE file, all TOXBIB records were extracted again from MEDLINE to get the 1987 MeSH Headings. Improvements in the profile used for this extraction process have resulted in some additional older records becoming a part of the new TOXBIB subfile. From now on, TOXBIB records will be extracted each year after MEDLINE is class-maintained in order to keep the MeSH Headings current.

As indicated previously, the new organization of the TOXLINE databases has necessitated some changes to the access charges. As shown below in Figure 2, Table I, after the regeneration, TOXLINE use will be billed at the same rate as MEDLINE use. This represents a substantial decrease in the costs for access to the information in this file. The rates shown for the new TOXLIT files reflect the royalty charges that must be collected for use of the component subfiles. However, users are reminded of an online searching technique - SAVESEARCH - in which the lower priced TOXLINE file is used to formulate and refine search strategies which are then used for more cost effective searching of the higher priced TOXLIT files. Table II in Figure 2 shows the rates for TOXLINE, TOXLIT, and TOXLIT65 after the October 1, 1987, MEDLARS price change goes into effect. See the article in the June

NLM Technical Bulletin for details of that price change.

and pricing will facilitate access by MEDLARS users to NLM's large collection of references to the toxicology literature.

We hope that the new structure

SUBFILES	SI ACRONYM

VERSION 2.0

[Editor's Note: Each month the NLM Technical Bulletin features a column of questions/answers concerning GRATEFUL MED. Contributions for this column will be appreciated.]

I get the error message, "PLEASE TURN ON YOUR MODEM," when GRATEFUL MED attempts to call the computer to run my search. What is wrong?

Instructions are sent by GRATEFUL MED to your modem. For example, it tells the modem to dial the telephone numbers that were stored during set-up. If for some reason GRATEFUL MED cannot communicate with your modem, the message "PLEASE TURN ON YOUR MODEM" will appear on your screen. Here are some reasons why GRATEFUL MED may not be able to communicate with a modem.

- A. The modem is not turned on.
- B. The modem's setting or switch for RESULTS CODES is set "incorrectly." The setting for RESULTS CODES should be set so that they are

"always sent." Your modem documentation should explain these settings.

C. The equipment is configured so that the modem uses either COM port 3 or COM port 4. GRATEFUL MED is programmed to accommodate modems using COM port 1 or 2. Users with COM port 3 or 4 are advised to call the MEDLARS Management Service Desk 800/638-8480 or 301/496-6193 with the following information about their equipment: the HEX representation of their COM port address (3 characters), and the interrupt code for their COM port. This information can be obtained either in your hardware documentation (computer or modem) or by contacting the manufacturer of the equipment. If you have this information we may be able to assist you in editing GRATEFUL MED so it can successfully communicate with your modem.

D. The modem is not Hayes-compatible. Some modem models, although advertised as Hayes-compatible, are not completely compatible. The bottom line for GRATEFUL MED is whether or not the modem understands the complete Hayes command set. If the answer is, "NO," GRATEFUL MED will not be able to communicate with the modem.

GRATEFUL MED users should also note the following articles and/or features in this issue:

TECHNICAL NOTES, p. 3.

HSDB[®] and Material Safety Data Sheets

Philip Wexler
Specialized Information Services, NLM

The Occupational Safety and Health Administration's (OSHA) Hazard Communication Standard outlines requirements for employers to reduce the incidence of workplace chemical hazards. The Standard, also known as a "right-to-know" law because employers must communicate potential hazards to workers, went into effect in November 1985. It calls for a hazard communication program to include labels, material safety data sheets, training, and access to written records. The issue of material safety data sheets (MSDS) surfaced again in the Emergency Planning and Right-to-Know Act of 1986. Among other provisions, this statute required that MSDS' be made available to the public. Many TOXNET users have found HSDB helpful in the preparation of material safety data sheets. This article will use a chart to examine the MSDS provisions of the article Standard and suggest how HSDB data fields may be used in the preparation of such sheets.

Although the Hazard Communication Standard does not dictate a rigid MSDS format, some basic information must be gathered for each chemical. The chart entitled "MSDS Data in HSDB" (Figure 1) summarizes these basic information requirements and suggests where in HSDB such information may be found. The first column is the short name assigned to the main information categories outlined in the Standard. The next column

describes these categories. The third column lists suggested HSDB fields, and the fourth column contains comments about these fields.

Readers should compare Figure 1 with the full Standard. The full Standard was published in the *Federal Register* on November 25, 1983 (Vol. 48, No. 228) and appears in the *Code of Federal Regulations* (29 CFR 1910.1200). Readers will observe that the chart summarizes only some of the MSDS provisions of the Standard. Date of preparation, addresses of manufacturers, and instructions about handling mixtures are among the requirements not summarized. In short, HSDB users whose primary concern is compliance, must not rely upon this chart as the given word. There is no substitute for a close reading of the law. The HSDB fields serve only as examples. No effort was made to include every possible data field that might be used in MSDS preparation. Users are encouraged to acquire a thorough understanding of the Standard and familiarize themselves with the complete file structure of HSDB.

The HSDB is rich in data for MSDS preparation. Several caveats are in order. The HSDB covers some 4200 chemicals, a fair number, but makes no claims about covering the entire world of hazardous chemicals. Further, the HSDB is but one of a number of services, online and printed, which are potentially useful to consult for MSDS'. Other relevant files are HAZARDLINE (1), OHM-TADS (2), RTECS (3), etc. A list of these sources, plus services which actually compile MSDS' for companies or provide their computer software in the form of MSDS templates, is the basis of a chapter in the forthcoming book *Information Resources in Toxicology*, 2nd edition (New York: Elsevier, due October 1987).

<u>SUBJECT</u>	<u>DESCRIPTION</u>	<u>HSDB FIELDS</u>	<u>COMMENTS</u>
IDENTITY	IDENTITY	ID (**)	The ID category includes fields containing names, synonyms, and identifying numbers.
PHYSICAL/CHEMICAL PROPERTIES	Physical/chemical characteristics, e.g., vapor pressure & flash point.	CPP (**)	A wide range of chemical and physical properties, including Vapor Pressure (VAP).
		FLPT	Flash Point (FLPT), although considered a physical/chemical property in the OSHA standard, occurs in the Safety and Handling Category (SAFE) of HSDB. Other SAFE fields, like Autoignition Temperature (AUTO) may be considered physical/chemical properties for MSDS purposes.
PHYSICAL HAZARDS	Physical hazards, including potential for fire, explosion, and reactivity.	HAZS DOT FLAM (*) FIRE (*) EXPL HAZR (*)	These headers and data fields, each within the SAFE category provide data relevant to such physical hazards as fire, explosion, and reactivity potentials.
HEALTH HAZARDS	Health hazards including signs & symptoms of exposure and medical conditions which may be aggravated.	TOXB (**)	Many fields in this category contain data on animal and human toxic effects. Particularly susceptible groups would be listed in POPL.
ROUTES OF ENTRY	Primary route(s) of entry.	RTEX PBEX	RTEX would cover probable routes of human exposure while PBEX provides probable exposures.
EXPOSURE LIMITS	OSHA permissible exposure limit, ACGIH TLV, or other exposure limits.	OPL (*) OREG (*)	Fields within these headers of the Exposure Standards and Regulations (EXSR) Category include OSHA Standards (OSHA), Threshold Limit Values (TLV), and NIOSH Recommendations (NREC).
NTP/IARC/OSHA LISTS	Whether the chemical is listed in the National Toxicology Program (NTP) <u>Annual Report on Carcinogens</u> or has been deemed a potential carcinogen in the International Agency for Research on Cancer (IARC) Monographs or by OSHA.	IARC	The IARC field lists summaries and evaluations of the <u>IARC Monographs</u> . OSHA standards appear in the OSHA field. Data from the NTP <u>Annual Report on Carcinogens</u> is carried in the HSDB and a separate field is available for NTP (National Toxicology Program Reports).
SAFETY AND HANDLING	Safe handling and use, including hygienic practices, protective measures & procedures for clean up of spills and leaks.	SAFE (**)	Within this category are data fields devoted to Protective Equipment and Clothing (EQU), Other Preventive Measures (OPRM) Cleanup Methods (CLUP), and Disposal Methods (DISP).

Figure 1A

CONTROL MEASURES	Control measures, e.g., SAFE (**) engineering controls, work practices, or personal protective equipment.	Some of the same measures as called for above, would be relevant here. SAFE also contains details on Shipment Methods and Regulations (SHIP) and Storage Conditions (STRG). HSDB does not generally cover engineering controls.	
EMERGENCY/FIRST AID	Emergency and first aid procedures.	ANTR DOT	The ANTR field is the best place to find emergency & first aid procedures. Portions of the DOT field are also helpful.
NOTES:			
- Data Fields are those mnemonics shown above without asterisks. They represent the basic units of data within HSDB.			
- A single asterisk (*) identifies a Header, used to group two or more data fields.			
- A double asterisk (**) signifies a Category, used to group related Headers or Data Fields.			
- These Unit Record concepts are more fully explained in the TOXNET chapters of the <u>NLM Online Services Reference Manual, 1986</u> .

Monthly Search Hint:

How to Suggest a MeSH Heading

Searchers often call or write with suggestions for new Medical Subject Headings (MeSH). These requests are forwarded to the MeSH Section for review. Suggestions for a new heading could include the following:

- a frequently recurring concept
- a term more general than the current MeSH term
- a term more specific than the current MeSH term
- a see under elevated to a major heading
- a term for a concept requiring two or more current headings
- a tree number change
- a change in the scope note or in the annotation
- a subheading

A form, developed by the MeSH

Section staff, makes this suggestion process easier for both searchers and the MeSH staff. This form is found in Appendix A and may be freely reproduced. Use the guidelines below to fill out the form. The numbers refer to the numbered sections on the form.

1. Ask for the suggested change specifically and clearly.
2. Supply postings counts if available. For example, there are 100 occurrences of this term as a Text Word in MEDLINE.
3. Provide a reason for a change or an addition in terminology.
4. If the concept or term is new, provide one or more citations to a source which includes the concept.
5. Fill in name, address, and phone number.

The MeSH Section is accepting suggestions now through March 31, 1988 for the 1989 MeSH vocabulary.

Serials Update

INDEXED TITLES UPDATE, JULY 1987

The following titles cited in MEDLINE, HEALTH, and POPLINE have recently been selected for indexing, undergone a title change, or ceased publication. This list is not cumulative; the information provided is only for titles whose status has changed since the

last UPDATE. More detailed information may be found in SERLINE. For further information, please contact MMS or Ms. Esther Baldinger, (301) 496-1276, Technical Services Division, NLM.

RTECS[®] Joins the TOXNET[®] System

Philip Wexler
Jeanne Goshorn
Specialized Information Services Division, NLM

Beginning in October 1987, RTECS (Registry of Toxic Effects of Chemical Substances) will join HSDB[®] and CCRIS in the TOXNET family of files. RTECS will concurrently remain available in ELHILL[®] until mid-December 1987, at which time it will be removed and reside solely in TOXNET.

The RTECS file has its origins in the *Toxic Substances List* published in 1971 to comply with the requirements of the Occupational Safety and Health Act of 1970 (PL 591-596). This publication, prepared by the National Institute for Occupational Safety and Health (NIOSH), eventually became known as RTECS. It is published in both paper and microfiche versions. Beginning in 1977 RTECS also became available online via NLM's ELHILL system. NIOSH retained responsibility, as they will continue to, for the file's overall content, maintenance and updating. Recently, NLM made the decision to move RTECS to the TOXNET system in order to provide enhanced search capabilities and provide

Technical Notes

Whenever applicable, the heading of each Technical Note includes a reference to the section of the Online Services Reference Manual 1986 that is considered most relevant to the item being discussed, e.g., (Manual 4.7.2). Users should keep in mind that the item may pertain to other sections as well.

COLUMBUS DAY HOLIDAY SCHEDULE

The NLM computer will be up and operational on a guaranteed basis on Monday, October 12, Columbus Day. Non-prime rates will be in effect all day. The MEDLARS® Management Service Desk will not be staffed. DOCLINE® will be available on Monday, October 12, but the DOCLINE Service Desk will not be staffed. The TOXNET computer system status is always guaranteed with non-prime rates in effect on all holidays. Please see the October 1986, *NLM Technical Bulletin*, Appendix C, for the complete 1987 holiday schedule.

NEW COMPUTER

NLM expects to install and make available a new computer in mid-October. The IBM 3081-K32 will be upgraded to an IBM 3084-Q64 computer and will approximately double the computing power. This will be the computer used for searching the ELHILL MEDLARS databases. Please refer to the article published in the October 1986 issue of the *NLM Technical Bulletin* entitled "New NLM Computer: Status and Plans" for more information.

FEDERAL TAX IDENTIFICATION NUMBERS

The Federal Tax Identification Numbers for both NLM and NTIS are listed below. They

may be useful to your purchasing department or organization to document that Federal taxes do not need to be paid for online services charges or government publications. State and local taxes may apply.

NLM 53-0196960
NTIS 54-1168333

NEW TOXNET FEATURE

A new feature named TOXNOTES is now part of the TOXNET system and complements the TOXNET NEWS. The NEWS will continue to alert users to changes and new developments in the TOXNET system and its files. TOXNOTES, on the other hand, reports on non-TOXNET topics related to toxicology and hazardous chemicals. Upcoming meetings, courses, and new publications will be covered. TOXNOTES is intended to serve as an electronic bulletin board for toxicology news. Users who have a noteworthy item they would like to share with colleagues may recommend it as a TOXNOTE via the online COMMENT command. If approved, the item will be issued as a TOXNOTE with the user's name and organization acknowledged if desired. TOXNOTES may be viewed by typing either TOXNOTES or NOTES.

ENTRY MONTH IN TOXLINE®

With the reconfiguration of TOXLINE effective August 1, 1987, values in the Entry Month (EM) field were changed in some of the subfiles of TOXLINE. Records in certain subfiles retained their original TOXLINE Entry Month (EM) values, while in others only one or two new Entry Month values were entered for the entire subfile as it was being replaced. Therefore, ranging or sorting on Entry Month for TOXLINE as a whole is no longer as useful as before. Beginning with the first update of the reconfigured files, 8708 (EM) scheduled for August 22, the Entry Month will, of course, be a useful limiting technique for selecting new records added to

TOXLINE with a monthly update. None of the EM values in the TOXLIT or TOXLIT65 royalty files were changed in the reconfiguration.

NEW AND REVISED EXPLAIN COMMANDS

Several ELHILL EXPLAIN descriptions have been created or revised to reflect changes to the ELHILL system. Three new EXPLAIN commands are now available: EXPLAIN TOXLIT, EXPLAIN NOTE, and EXPLAIN RR. The Note (NO) and Related Registry Number (RR) are new fields which were added to the CHEMLINE file and were described in the May 1987 issue of the *NLM Technical Bulletin*. The revised EXPLAINS are: EXPLAIN TOXLINE, EXPLAIN CHEMLINE, and EXPLAIN PRICES (shows prices current as of August 1, 1987). Please note that there are two separate EXPLAINS for the new TOXLINE and TOXLIT files.

TOXLINE SUBFILES DELAY

The NIOSHTIC and Poisonous Plants

Bibliography subfiles, planned as new additions to the regenerated TOXLINE file which became available on August 1, 1987, have been delayed while conversion programs are refined and testing is completed. The NIOSHTIC subfile covers the more recent updates to the National Institute of Occupational Safety and Health's extensive file of bibliographic references on health and safety. The Poisonous Plants Bibliography subfile is a file prepared especially for NLM on the toxic effects of poisonous plants as reported in the literature prior to 1976. Both of these subfiles are expected to be added to the TOXLINE file with the August update, 8708 (EM) scheduled for August 22.

INDEX MEDICUS™; JUNE 1987 ISSUE

Subscribers to *Index Medicus* have reported isolated cases of duplicate or missing pages in the June 1987 issue. Please check your copy for the following: repeat of pages 1327-1358 and missing pages 1359-1390. Call the Government Printing Office's Subscription Research Section on (202) 275-3054 if your copy is defective.

The new rates for MEDLARS databases go into effect October 1, 1987. Please refer to the article in the June 1987 issue of the *NLM Technical Bulletin* for more information and the new Online Pricing Algorithm Charges Sheet.

Please access FILE INFORM and type NEWS to see the most recent news items online!

NLM Online Users' Meeting, MLA Annual Meeting, Portland, OR, May 18, 1987

The following questions were posed during the NLM Online Users' Meeting at the recent MLA Annual Meeting. The answers provided are based on the answers given at the time of the meeting, but have been edited and, in some cases, amplified by staff at NLM.

1. Will there be a new edition of the Basics of Searching MEDLINE: A Guide for the Health Professional?

Yes. The target timeframe for the printing of the new guide is fall or winter 1987/1988. At this time, it is not known when NTIS will make *The Basics of Searching MEDLINE* available for distribution. It will be announced in the *NLM Technical Bulletin*. The new guide will be an updated version of the old with more sample searches and an index.

2. Will there be a capability to selectively print citations i.e., PRT 1,6,7?

Yes, PRINT SELECT should be operational by 1988. One will be able to print any combination of retrieved citations. For example, if one wants to print the third through the fifth, and seventh citations, only one print command is needed.

Other enhancements due at about the same time include:

NEIGHBOR SELECT: A method of generating a numbered list of terms from the index. One or more terms or ranges of terms on this list will be available to be SELECTed and used in a search. This SELECT LIST will be retained for searching as well as displaying during the same connect session.

"NON-RESPONSIVE" ANSWERS TO SYSTEM QUESTIONS: Whenever the system prompts

with "CONTINUE PRINTING," or "UP N, DOWN N" (following a NEIGHBOR), or a MULTI-MEANING message, it will be possible to either respond to the query, or enter a search statement. In the latter case, the system will transform the search statement into a FIND command without the user having to remember to type FIND or FD.

Stay tuned. We will be announcing details and instructions of the implementation of these features.

3. When will MeSH have a heading for tumor necrosis factor?

The heading TUMOR NECROSIS FACTOR has been added as a major heading for the 1988 MeSH.

4. Please define "up front" (i.e., asterisked) articles in Index Medicus.

Indexers usually apply a subheading to each MeSH heading when indexing an article for *Index Medicus*. The subheading used indicates the main emphasis of the article. For example, an article on the "diagnosis of lung neoplasms" is indexed "LUNG NEOPLASMS/* diag", and the article appears in *Index Medicus* in the subheading "diagnosis" section under the heading LUNG NEOPLASMS.

If no single subheading is appropriate to indicate the emphasis of an article, indexers do not apply a subheading for *Index Medicus*. For example, an article on the "epidemiology, diagnosis and treatment of lung neoplasms" is to be indexed "*LUNG NEOPLASMS/occur/diag/ther", and the article appears immediately under LUNG NEOPLASMS in *Index Medicus*, and not further down the list in any of the specific subheading sections under LUNG NEOPLASMS.

Articles indexed this way are sometimes referred to informally at NLM as "up front" articles. "Up front" derives from the practice of citing them at the top of the list of articles under a MeSH heading in *Index Medicus*, before any of the specific subheading sections that appear below. (Instructions on how to search for these

articles in MEDLINE appeared in the April 1985 issue of the *NLM Technical Bulletin* as the "Monthly Search Hint: How to Search for the General Aspect of a Topic".)

5. Is NLM working on Nesting or Adjacency?

No, not at the present time.

6. If the published errata policy allows NLM to change and correct a title, can the searcher still find the old uncorrected title in the database?

Following an erratum notice issued by a publisher, NLM corrects a title as shown by the publisher. Since users want correct information, we cite only the correct title and do not retain the incorrect title in the database.

Anyone who wants the incorrect title will have to trace it down, using the reference shown within the erratum rubric we are careful to append to the title. The publisher there usually refers to the wrong as well as the right.

Since there is a lapse of time between the publication of the "wrong" title in *Index Medicus* and the correct title in MEDLINE, the searcher would have access to the wrong title in the monthly *Index Medicus* issue. The *Cumulated Index Medicus* will only have the corrected title.

7. For those MeSH Headings that have an initial letter, like T-Cell, would they file under T or under C in the Annotated MeSH?

It varies, depending on where the MeSH analyst thinks a searcher or other user would most likely look up the heading. For example, T Lymphocytes is currently sorted under L, while T-Phages is under T. Cross references can also be sorted in a place best suited to the term. An example of this is T Cell Growth Factor see Interleukin 2. As a statistical matter, it seems that most of these terms are currently sorted under the initial character. Finally, we generally sort these terms so that, for example, T-Cell precedes Taboo.

8. The new procedures for the Update (i.e., a

special issue of the NLM Technical Bulletin on vocabulary and system changes instead of "in-person updates") will reach more people but I wonder if NLM isn't sacrificing quality?

NLM's recent decision to discontinue in-person online updates in 1987 was taken after months of thought, deliberation and discussion with the Regional Medical Library staffs and other medical librarians. Indeed, the decision was made with the medical librarian/searcher fully in mind.

There were several reasons for our decision to discontinue the in-person updates. First, the amount of information from NLM for each year's update is no longer sufficient to warrant an in-person update. We have been receiving comments that the information content of the updates did not warrant a whole or partial day. Second, except for changes in MeSH and the backfile configuration, system features are changed throughout the year and cannot be anticipated in sufficient detail for the updates. Thus, most of the information must be provided throughout the year. A recent example is the TOXNET-ELHILL gateway. Third, the material for the updates had to be prepared in August and was sometimes out-of-date at the time of the update. The new process will provide information in a more timely fashion. This includes the new MeSH terms which can be discussed in early fall. The fourth reason is the small percentage of searchers that are actually coming to the updates. Many librarians did not attend the updates. We must devise clear, interesting methods for communicating updated information to all our users.

The updates have been popular and they were useful in providing an opportunity for searchers to discuss problems. We would like to improve upon these discussions and raise the quality and level of information provided during NLM online sessions.

9. When NLM reconfigures the MEDLINE backfiles this year as has been mentioned in this meeting, would you consider making one massive file like BRS and DIALOG?

Under the current ELHILL retrieval system, we cannot create a single, massive file such

as the other vendors have done, but we will do what we can to reduce the number of physical backfiles. Effective mid-December 1987, the three oldest backfiles (MED66, MED71, and MED75) will be reconfigured into two files named MED66 and MED72. In addition, these two new files will contain citations based on Year of Publication (YR), and not *Index Medicus* year. With the size of the citations and the large number of searchable fields, these two new files represent the upper limit of the ELHILL software constraints on the size of a database. NLM also plans to evaluate MED77 through MED83 for a probable reconfiguration by Year of Publication in December 1988. As a reminder, MeSH searching in a single,

massive file should be carefully thought out because a MeSH heading may have been introduced at a certain time in the past and the retrieval will not include citations on the topic when it was previously indexed under another heading.

10. We have noticed on our recent invoice that we have a credit balance. Should we send some payment anyway?

No, do not send a payment if your invoice indicates that the balance owed is zero or that there is a credit balance. Wait until the following month and, if the credit amount turns out to be insufficient to cover online charges, then only send payment for what is owed.

CANCERPROJ[®]

(1976 - 1987)

Dianne E. Tingley, Ph.D.
Chief, ICRDB Branch, NCI

Jim Carter
Database Manager, ICRDB, NCI

The National Cancer Institute (NCI), sponsor of CANCERPROJ, has determined that as of October 1, 1987 the database will no longer be available online. Since 1976, the CANCERPROJ database has been a resource of information on current domestic and foreign cancer research projects, reaching a peak size of over 20,000 project descriptions in the early 1980's. Input was provided by the Smithsonian Science Information Exchange (SSIE) under contract to NCI, starting from a core of project descriptions derived from the SSIE's internal database of government-sponsored projects. This core was enhanced by the addition of other domestic and foreign sources of project information, and a systematic process for soliciting update information. Quarterly updating ceased in November 1981, when the SSIE was absorbed into the Department of Commerce and its special information programs terminated.

The NCI immediately initiated a new procurement to continue CANCERPROJ input and updating activities, but the new contract was delayed until April 1984. By that time most of the information in the old CANCERPROJ file was so out of date that a total rebuilding was the only reasonable course of action. From this new beginning, the now fully MeSH- and CAS

Registry Number-indexed CANCERPROJ file grew to a size of over 10,000 project descriptions within two years. Unfortunately, this CANCERPROJ file was never to reach its full potential for, just as systematic updating was getting underway, budget reduction intervened. With great reluctance, the NCI decided to absorb a necessary cut by allowing the input contract to expire. A final update to CANCERPROJ was made in July 1986, and the suspension of further updating was announced in the August 1986 *NLM Technical Bulletin*. Since that time, the file has remained unchanged except for annual class maintenance to update with 1987 MeSH headings. Although Final Year information is incomplete, NCI estimates that only about 25% of the projects summarized in CANCERPROJ will still be active as of the end of September, when the file comes down.

Though hours of online usage never approached those for CANCERLIT[®], there remained a small, faithful core of users who had apparently discovered the value of information on research projects in progress. There is still sentiment at NCI that such pre-publication information can be of great benefit to researchers and administrators, but there is only limited awareness of its potential within the scientific community. The International Cancer Research Data Bank Branch of NCI would be most interested in comments or suggestions concerning the usefulness and optimal presentation of project information, and will continue to study cost-effective options for its collection and delivery. Suggestions may be directed to International Cancer Research Data Bank, R.A. Bloch Building, Building 82, Room 113, Bethesda, MD 20892.

NLM Begins Copy Cataloging Program

Cataloging Section, Technical Services Division

The NLM Cataloging Section has begun using available cataloging copy from the Library of Congress (LC) and the Government Printing Office (GPO) for printed monographs being added to the NLM collection. NLM's copy cataloging program is intended to make more effective use of available cataloging resources while reducing the time lag between the receipt of a title and its announcement to NLM's onsite and network users. The copy cataloging records are being released to the CATLINE[®] database, published in the *NLM Current Catalog*, and are available in the CATLINE/MARC tape distribution.

NLM catalogers will not review or modify the bibliographic description or the choice of main entry and added entries, except when the LC or GPO decision on tracing a series differs from NLM's practice. NLM will trace series according to its established decision and form. Name headings and uniform titles will match the form found in the LC or GPO record. When a name form in NLM's authority file varies from that in the LC or GPO record, NLM will reconcile the name, maintain its database, or request LC to change the heading in its database.

NLM will assign its class number from the NLM classification scheme for subject areas covered by its schedule. NLM catalogers will use the LC class number from the source copy if the subject area is one for which NLM applies the LC schedules. The book number will be assigned according to NLM's application of the Cutter-Sanborn tables and rules for shelisting.

VERSION 2.0

[Editor's Note: Each month the NLM Technical Bulletin features a column of questions/answers concerning GRATEFUL MED. Contributions for this column will be appreciated.]

Is there any way I can request assistance from the MEDLARS Management Section other than calling the Service Desk?

You can always write to our office, but if

you are using GRATEFUL MED you may want to send us an online comment.

HOW TO SEND A COMMENT TO MMS USING GRATEFUL MED

You will need to be connected directly to the NLM computer:

1. You can either: Select no. 3 "Search directly..." from the ACTION SCREEN.

OR

Press the F9 key during a search, i.e., while GRATEFUL MED is interacting with the NLM computer. Note: your search will end at that point.

2. You must wait for the computer to prompt you with USER:

```

3.  SS 1 /C?
    USER:
    comment                                <-  ENTER THE COMMAND, COMMENT
                                                AND PRESS THE ENTER KEY.

    PROG:
    DOES YOUR COMMENT REQUIRE A RESPONSE FROM NLM? (YES/NO)

    USER:
    Y                                        <-  ENTER Y FOR YES. (NOTE: IF
                                                YOU ENTER N, THE COMMENT WILL
                                                NOT BE ANSWERED.)

    PROG:
    NAME & TELEPHONE NUMBER:

    USER:
    martin blaise 617/555-1234             <-  INCLUDE AREA CODE AND A
                                                DAYTIME PHONE NUMBER.

    PROG:

Colonel Rogers: A Reminiscence

Thelma Charen
Indexer

The library world is saddened at the announcement of the death of Dr. Frank Bradway Rogers. Although he was the Director of the National Library of Medicine from 1949 to 1963 I first knew him as the Director of the Army Medical Library, later called also the Armed Forces Medical Library.

I'm one of the few people left at the Library who knew and worked with Colonel Rogers. I was at the Library during World War II at the time he was assigned here as an Army officer and before he went to library school. We first met when I was still working as a proofreader in *Index-Catalogue* Section, when I was interviewed by him about the differences in approach between Catalog Section (where I had been a preliminary cataloger) and *Index-Catalogue*.

As time went on, I grew to know him more, especially after the demise of *Index-Catalogue* and the birth of *Current List of Medical Literature*, the predecessor of *Index Medicus*. Every contact was a reward I cherish. All I know about a lot of things I owe to him and Seymour Taine who worked with him in building *Current List*.

Colonel Rogers felt that the growing *Current List*, staffed largely by a group of typist and proofreader transferrees from *Index-Catalogue*, would have to have some medical knowledge. And so for the benefit of the *Current List* staff and Reference Division he held a series of weekly lectures on all facets of medicine which we neophytes could apply to our freshly learned indexing. I still have the pack of notes I took at those lectures 37 years ago; I looked at them this morning in

another connection.

I am making no grandiloquent statement of Colonel Rogers' contribution to medical bibliography for that will be done by more worthy and more important people than I. I can say that I was not devastated by the report of his death because he will always be alive in my mind. I have many many happy, pleased and pleasant thoughts to look back on and could relate anecdote after anecdote about our personal encounters. Let me tell you of two of the most haunting. I remember them because Col. Rogers acted the way I act and would want anyone to act.

During the creation of the first black-and-white MeSH in 1963, Constantine Gillespie, Stanley Jablonski, and I were asked to suggest terms to become official headings. Several times running I submitted on formal sheets of paper a request for DEMENTIA, PRESENILE and each time it was rejected by the Colonel since he felt that only DEMENTIA, SENILE was at issue. I recall submitting it a fourth time and getting back the sheet marked "I give up." We got the heading.

The second took place during our many interviews on the progress on a retooling of the Library's rules for the abbreviation of journal titles based on Billings' principles and the *World List of Scientific Periodicals*. The research we did resulted in the publication of our rules. During the work there was some question about what I considered a discrepancy in the abbreviation of "Pennsylvania": he wanted it in two different forms under what I thought was much too subtle an approach. Each time he gave a reason I countered with a logical objection. I finally asked "Why your way?" "Because I'm the Colonel", he replied. THAT I understood and liked.

I know that - with no effort at all - I am going to think back on many more stories and continue to use daily all the wonderful things about indexing I learned from him. Colonel Rogers is still alive in the Library for me.

RTECS

Continued from page 1.

a more central source for NLM's toxicologically related databanks. Further, TOXNET has no record length limitations and will therefore be able to accommodate all RTECS records in full.

Like TOXNET's other files, RTECS is arranged by chemical substance. It contains considerable chemical identity information, such as synonyms, Chemical Abstracts Service registry numbers, molecular formulas, molecular weights, and Wiswesser Line Notations. The following types of toxicity studies are summarized and referenced: skin and eye irritation, general toxicity, reproductive effects, carcinogenicity, and mutagenicity. Typical information contained for a given study would include route of exposure, species, dose, and effects observed. Toxicology and carcinogenic reviews, where available on any given chemical, are cited. Such reviews may come from the International Agency for Research of Cancer (IARC) Monograph series or may be other general review articles from the open scientific literature. Data on threshold limit values and NIOSH recommended limits are also provided. RTECS records include data

on the status of the chemicals in various federal testing or reporting programs (e.g., EPA Genetox, NTP Carcinogenesis Bioassays,) as well as regulations or standards under which the chemical may fall (e.g., OSHA standards, MSHA standards).

By the time RTECS is mounted in TOXNET, it will contain some 90,000 chemical records. The detailed criteria used to select these chemicals and a full description of the significance of the test results are provided in the introductory pages of the microfiche or paper version of RTECS. Also listed therein is the standard nomenclature used for routes, species, and toxic effects.

Users accustomed to searching RTECS via ELHILL will find essentially the same data but in a more streamlined file structure. Of course, TOXNET's full range of special system characteristics will allow highly efficient searching and printing. The ability to use the SAME and PRT HITS commands should add greatly to the power of searching RTECS.

A future *NLM Technical Bulletin* article will describe the complete RTECS/TOXNET unit record, provide search hints and include examples of searching the file.

Introducing CHEMLEARN Microcomputer-Based Training for CHEMLINE

Miriam Perkins
Melvin Spann, Ph.D.
Specialized Information Services, NLM

The National Library of Medicine recently released CHEMLEARN, the first in a series of PC-based, self-instructional tools for selected MEDLARS databases. CHEMLEARN is a fully comprehensive, microcomputer-based training package for CHEMLINE (Chemical Dictionary Online) based on a mainframe computer assisted instruction program developed at the Library in 1979. It is designed to teach medical and health professionals, as well as librarians and information scientists, how to use CHEMLINE effectively. Its menu-driven structure allows the novice user to learn about the basic content and use of CHEMLINE and the skilled searcher to select instruction in the more complex aspects of the database. It may be used in place of formal training, as a precursor to or a refresher following formal training, or for review of a particular concept.

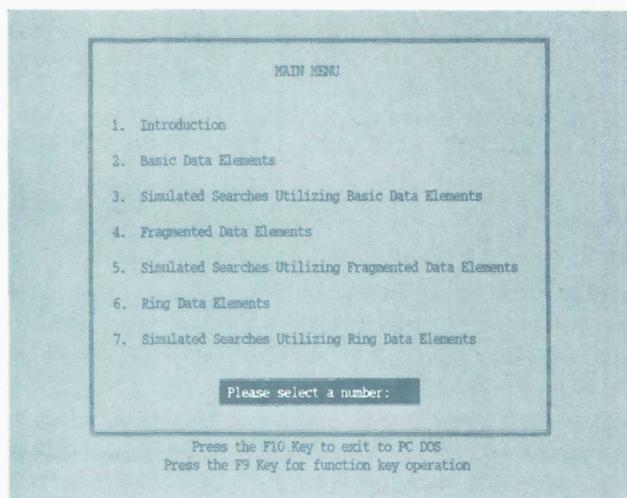

Figure 1 Main Menu

CHEMLEARN is organized into seven chapters. The introduction is presented in Chapter One. Chapters Two, Four, and Six

contain discussions of the data elements in CHEMLINE, followed by multiple choice and/or fill-in-the-blank problems. Chapter Two covers the basic data elements used when searching CHEMLINE. Name and Formula fragment data elements are covered in Chapter Four and the ring data elements in Chapter Six. Chapters Three, Five, and Seven provide simulated searches which illustrate actual online sessions. The Main Menu for CHEMLEARN is given in Figure 1.

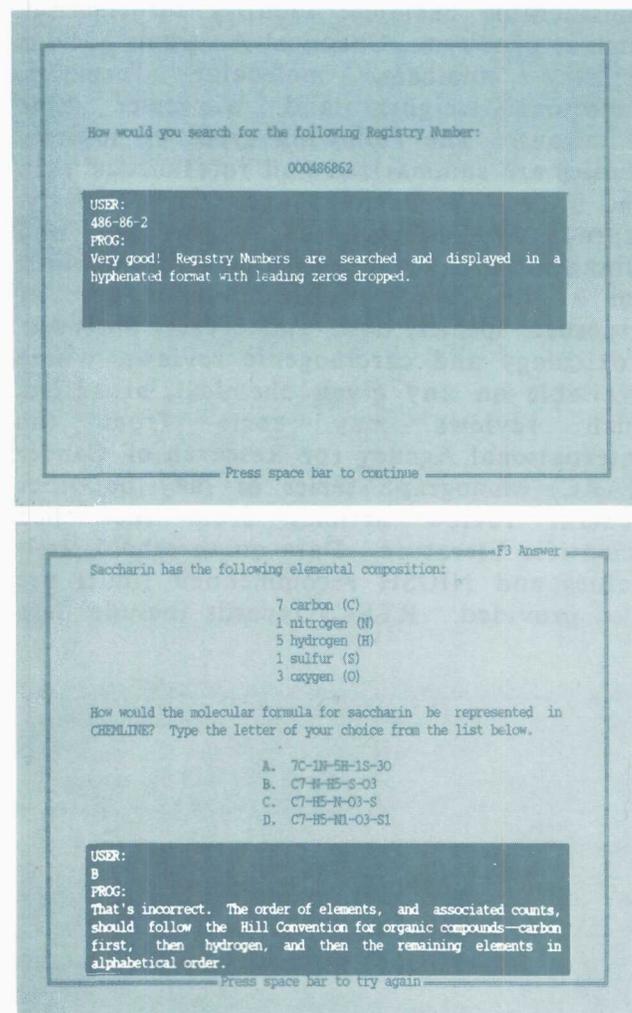

Figure 2 Registry and Molecular Formula Problems

User interactions with CHEMLEARN (problems and simulated searches) are displayed in an area of the screen designed to simulate user interactions during actual CHEMLINE sessions. Users interact with CHEMLEARN by entering a letter, word, or phrase after the USER: prompt, followed by a carriage return. CHEMLEARN responses are displayed following the PROG: prompt.

Figures 2 and 3 illustrate user-system interactions with CHEMLEARN.

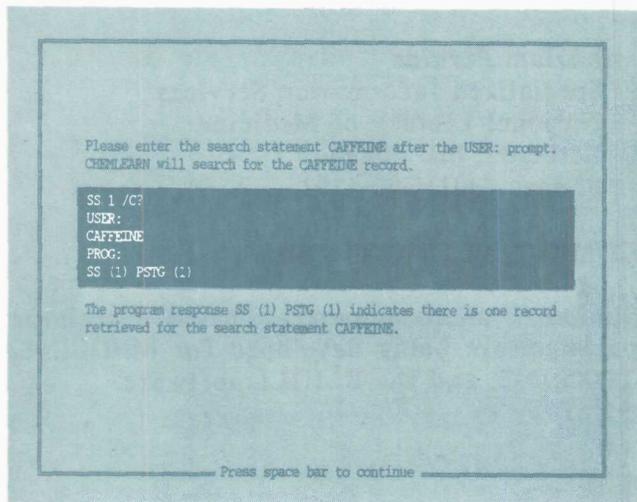

Figure 3 Caffeine Simulated Search Interaction

CHEMLEARN provides user-specific feedback for correct and incorrect answers to both multiple choice and fill-in-the-blank problems. The program responses to correct answers reinforce or summarize the concepts essential to the problem. Program responses to incorrect answers provide a brief explanation of the detected errors. The user is given unlimited attempts to answer a problem correctly, or may have the program automatically enter the answer.

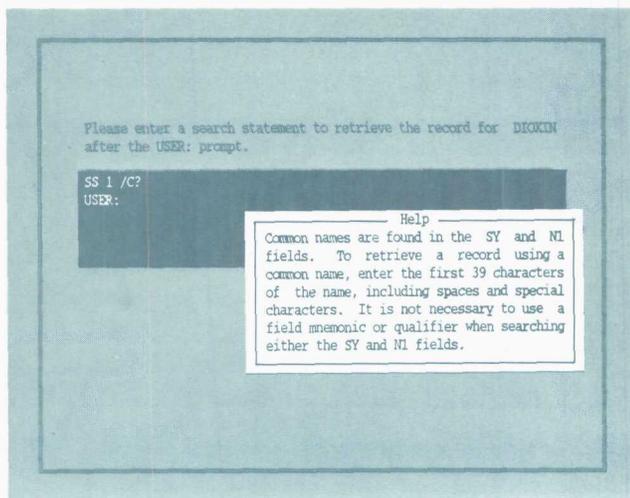

Figure 4 HELP Window

The user has the option of accessing additional information at selected points in CHEMLEARN. In the simulated search chapters, HELP windows, which provide assistance in formulating search statements

and commands, are available. In chapters discussing data elements, SUMMARY windows that summarize and reinforce the material presented in the preceding discussion are available. HELP and SUMMARY windows are shown in Figures 4 and 5.

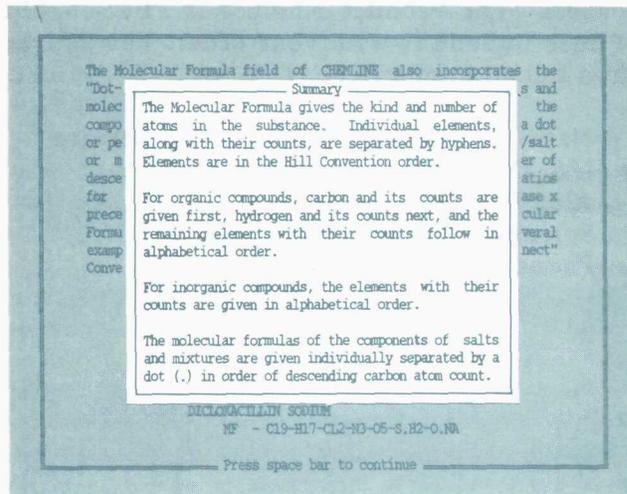

Figure 5 SUMMARY Window

Function keys are utilized to facilitate movement throughout CHEMLEARN. They allow the user to go directly to the main menu, return to the previous menu, advance to the next screen, return to the previous screen, and exit CHEMLEARN and return to PC DOS.

Several special features in CHEMLEARN are the Map, Dictionary, and tracking function. The Map serves as an index to the program, highlights sections that the user has completed, and acts as an overall menu for CHEMLEARN. The Dictionary contains definitions for the data elements, basic chemical terms, acronyms, and publications found in CHEMLEARN. The tracking function allows users to monitor their progress through CHEMLEARN in both current and subsequent sessions.

EQUIPMENT SPECIFICATIONS

CHEMLEARN is written in the PILOTplus authoring language and runs on IBM-PC, PC-XT, PC-AT and fully compatible computers. It requires 256K RAM memory, one disk drive, and DOS 2.0 or higher. It supports most monochrome, color graphics, or enhanced color graphics displays.

ORDERING INFORMATION

CHEMLEARN can be purchased from the National Technical Information Service (NTIS) in the form of two low density floppy diskettes for \$25 (plus \$3 handling charge per order). The Product Number is PB87-183612. Please include it with your order. The address and phone number for NTIS are:

National Technical Information Service
U.S. Department of Commerce
5285 Port Royal Road
Springfield, VA 22161
Phone: (703) 487-4650

Please direct any questions or comments regarding CHEMLEARN to:

Miriam Perkins
Specialized Information Services
National Library of Medicine

Phone: (301) 496-1131

COMING ATTRACTIONS

Similar microcomputer based training packages are being developed for MEDLINE, TOXLINE, and the ELHILL software.

Monthly Search Hint:

Searching Techniques for the New TOXLINE and TOXLIT Files

Susan Hawk
Jeanne Goshorn
Specialized Information Services, NLM

As described in the July 1987 issue of the *NLM Technical Bulletin*, TOXLINE has been reconfigured into a non-royalty file (retaining the name TOXLINE) and a pair of royalty files (TOXLIT and TOXLIT65). Users may well be wondering what impact this change will have on searching. The following questions and answers are intended to provide guidance in searching these files. Please call or write if there are additional questions.

Question: Does the cost differential between TOXLINE and TOXLIT have any impact on comprehensive searching?

Answer: Essentially, for a comprehensive search both TOXLINE and TOXLIT should be searched. One way to do comprehensive searching cost-effectively is to use the less expensive TOXLINE to enter and refine the search and to scan sample references. Then modify the strategy for use in TOXLIT. This will mean a reduction of the higher connect charges during the trial and error part of the search session.

If a comprehensive search of only certain data sources is desired, then use of one file may be sufficient. For example, research projects information is available on TOXLINE. The CRISP subfile describes research funded by the National Institutes of Health (NIH), and does not contain bibliographic citations. Therefore, for information on current toxicology research that may not have been published yet, search TOXLINE. For a more precise search, "AND" the strategy with CRISP (SI) to retrieve just the research projects. Incidentally, remember that NLM cannot supply research project documentation. Instead, contact the

Sponsoring Agency (SA) or the investigators (AU and AD fields). New data for fiscal year 1986 have been added to TOXLINE.

Seven of the twelve TOXLINE subfiles are unavailable elsewhere for online searching. This unique information can now be searched for a much lower cost than previously. The answer to the next question addresses the uniqueness of TOXLINE subfiles in more detail.

Separation of the files in the current configuration allowed true MeSH[®] searching capability, with EXPLODEs and SUBS APPLY, to be made available for the TOXBIB portion of TOXLINE. TOXBIB is the part of TOXLINE that is derived from MEDLINE, so the advantage of MeSH searching is not so unusual now, but plans include making more of TOXLINE MeSH-searchable.

Question: Portions of TOXLINE are available as databases outside of NLM. Some data are unique to NLM. Please clarify which are which.

Answer: Figure 1 provides a tabular answer to the question. For each subfile, it summarizes the percentage of the parent file comprised, whether the file is unique to NLM, and whether TOXLINE/TOXLIT carries the database intact, or uses only a toxicology-related subset of the data.

Question: How can a searcher avoid doing the same search twice if information is to be retrieved from both TOXLINE and TOXLIT?

Answer: Use SAVESEARCH, an ELHILL technique especially designed to retain search formulations in the computer's memory, for later use. When SAVESEARCH is specified at the start of a search session, all search statements that follow are saved whether or not they generated postings in the file originally searched. Remember that SAVESEARCH will only execute the last search statement and those statements leading up to it. Figure 2 illustrates an example of SAVESEARCH for TOXLINE and TOXLIT.

Question: Should TOXLINE be searched with

MeSH Headings (MH) or Text Words (TW)?
 What about the best way to do subject
 searching in TOXLIT and TOXLIT65?

Answer: That depends upon at least two factors: 1. Is the search to be run in both TOXLINE and TOXLIT? 2. Is the search to be restricted to just the MEDLINE-derived portion of TOXLINE (i.e., TOXBIB)? Currently, the MeSH-indexed TOXBIB contains 76% of the citations in TOXLINE. By using MeSH only, retrieval is limited to this subfile, omitting the eleven others. Another approach might be to use both MeSH and Text Words in an initial TOXLINE SAVESEARCH formulation, "ORing" them together. While MeSH only appears in TOXBIB, no harm is done in using these extra search terms in a search of the full TOXLINE file or in searching TOXLIT with SAVESEARCH. In cases where MeSH terms are not part of the record, they will not yield any postings while the Text Word portion of the strategy will be relied upon to retrieve records.

Another way to search is to use Text Words

alone. If the search is to run in both TOXLINE and TOXLIT, remember that only Text Words will retrieve citations in TOXLIT. Because MeSH headings in TOXLINE are also "texttracted," that is they appear as Text Words as well as MeSH headings, some search strategies will lend themselves to using Text Words only.

Question: While TOXLINE's comprehensive coverage of the literature of toxicology is appreciated, sometimes the searcher simply retrieves too much. How can a search be limited when needed?

Answer: The TOXLINE chapter of the *Online Services Reference Manual, 1986* section 12.6.3, discusses five ways to limit retrieval. Probably year and language are the most helpful. Ranging on Year or Publication (YR) or ANDing selected years with the retrieval set is a good way to limit retrieval, particularly in TOXLINE where there are over twenty years' worth of citations. Limiting to English-language publications with the "AND NOT FOR (LA)" strategy also will reduce retrieval.

Subfile Acronym	Percentage of File	Unique?	Subset?

Serials Update

INDEXED TITLES UPDATE, AUGUST 1987

The following titles cited in MEDLINE, HEALTH, and POPLINE have recently been selected for indexing, undergone a title change, or ceased publication. This list is not cumulative; the information provided is only for titles whose status has changed since the

last UPDATE. More detailed information may be found in SERLINE. For further information, please contact MMS or Ms. Esther Baldinger, (301) 496-1276, Technical Services Division, NLM.

NLM TRAINING PROGRAM CHANGES

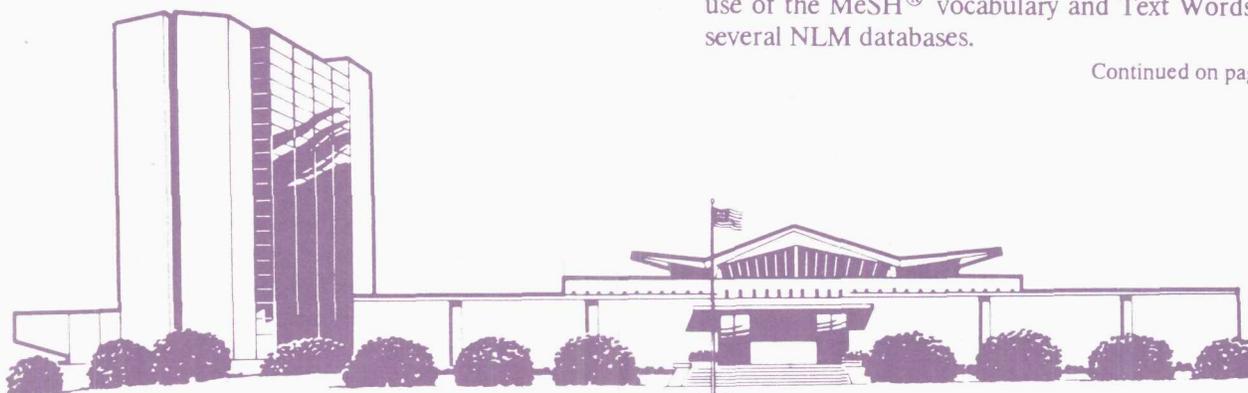

Patricia C. Buchan
MEDLARS Management Section, NLM

With the release of the 1988 Training Class schedule (see page 13), NLM is announcing a number of changes/additions to the Online Services Training Program. Each of these will be discussed within the context of the specific training class.

I. INITIAL ONLINE SERVICES TRAINING CLASS - NEW NAME

Since NLM began training searchers, the introductory level class has been called "Initial Training." Beginning with the January 1988 class offerings, this name has been changed to the "Fundamentals of MEDLARS® Searching." This title was chosen over the former generic one to describe the class as search training on the NLM system. Currently, the "Fundamentals" will continue to be a 5-day class consisting of three modules designed to introduce online searchers to basic MEDLARS search techniques, system capabilities, use of the MeSH® vocabulary and Text Words, and several NLM databases.

Technical Notes

Whenever applicable, the heading of each Technical Note includes a reference to the section of the Online Services Reference Manual 1986 that is considered most relevant to the item being discussed, e.g., (Manual 4.7.2). Users should keep in mind that the item may pertain to other sections as well.

VETERANS DAY HOLIDAY SCHEDULE

The NLM computer will be up and operational on a guaranteed basis on Wednesday, November 11, 1987, Veterans Day. Non-prime rates will be in effect all day. The MEDLARS Management Service Desk will not be staffed. DOCLINE® will be available on Wednesday, November 11, but the DOCLINE Service Desk will not be staffed. The TOXNET® computer system status is always guaranteed with non-prime rates in effect on all holidays. Please see the October 1986, *NLM Technical Bulletin*, Appendix C, for the complete 1987 holiday schedule.

CRISP (RPROJ) SUBFILE OF TOXLINE® (Manual 12.5.10)

As part of the August 1 TOXLINE regeneration, 1983 - 1985 data was removed from the CRISP subfile (formerly RPROJ) and replaced with project descriptions current for fiscal year 1986 (Oct. 85 - Sept. 86). Since this subfile contains reports of research projects in progress, older records for projects which are completed are not very useful. Rather, current information on these past projects can usually be found in the published literature. Next year, these 1986 records will be retained and fiscal year 1987 projects will be added.

TOXNET ENHANCEMENTS

A number of enhancements have been made to the TOXNET system. Descriptions can also be found in the TOXNET online NEWS.

Offline Prints - Display of Search Summary (Manual 25.5.16, 25.6.1)

The parameter, TITLEPAGE, has been automatically added to users' stored PROFILE and set to the value EXPANDED. This means searchers will receive a copy of their search strategy on the title page of their TOXNET offline prints. Users who elect to have strategies omitted from offline prints will want to use the PROFILE MODIFY TITLEPAGE command and choose the compact option.

Display of Sources - New Options (Manual 25.6.1)

The SOURCE parameter has also been added to the stored PROFILE. This has been set to the value DEFAULT which means any PRT INDENTED command will display the full source reference while all other PRT commands display an abbreviated reference. Users may choose always to see the abbreviated reference by modifying the SOURCE parameter to ABBREVIATED. Alternatively, this parameter may be set to EXPANDED to always see the full source reference. Changes may be made by entering PROFILE MODIFY SOURCE. This feature operates only in conjunction with the HSDB® file.

Changes in Display of Time and Date (Manual 25.9.8)

The "TIME command will now result in the online display of both the U.S. Eastern Time and date. Also, both the time and date now automatically display after login.

Line Continuation of Search Statements (Manual 25.4.9)

Line continuation is now available on TOXNET. A lengthy search statement can be entered using multiple lines as long as each wrapping line ends with a Boolean operator (AND, OR, AND NOT). Users will then be prompted to continue the search statement.

Display Command (Manual 25.9.2)

The DISPLAY command, which provides an online summary of preceding search statements, has been reformatted for clarity. The DISPLAY is provided in a format similar to the offline print title page display (described above).

Truncation Limit Raised (Manual 25.4.8)

The entry of a search term truncated with a colon (:) will now result in a display of postings of up to 20 terms

beginning with the root term. The limit had previously been 10 terms.

Display of Registry Number (RN)
(Manual 25.5)

The RN data field will now automatically be displayed with all PRINT commands unless specifically excluded as in PRT ___ EXCLUDE RN or PRT ONLY ___.

PRICING SCHEDULE, EFFECTIVE OCTOBER 1

The complete domestic and foreign pricing schedule for MEDLARS services is included with this issue as Appendix A.

MESH TOOLS 1988

The following 1988 MeSH tools may now be ordered from the National Technical Information Service (NTIS) for immediate delivery.

*Medical Subject Headings--
Annotated Alphabetic List, 1988*
PB87-214235/GBB
\$25.50, U.S. and Canada
(\$51.00 foreign);
microfiche, \$13.50 (\$27 foreign)

*Medical Subject Headings--
Tree Structures, 1988*
PB87-214243/GBB
\$20.50, U.S. and Canada
(\$41.00 foreign);
microfiche, \$6.50 (\$13 foreign)

*Permuted Medical Subject
Headings, 1988*
PB87-214250/GBB
\$20.50, U.S. and Canada
(\$41 foreign);
microfiche, \$6.50 (\$13 foreign)

Orders should be sent to:

National Technical Information Service
U.S. Department of Commerce
5285 Port Royal Road
Springfield, Virginia 22161
703/487-4650

(for phone orders from individuals/organizations with an NTIS deposit account or major credit card)

Remittance should be sent with all mail orders. Remember to add \$3.00 (\$4.00 non-U.S.) shipping/handling charge per order, not per item ordered.

UPDATES TO THE LIST OF NLM'S REGISTERED NAMES AND TRADEMARKS

Please add the following updates to the list of NLM databases and services that are officially registered as trademarks with the U.S. Patent and Trademark Office or that are currently protected while trademark rights are being claimed.

NLM Student Code Program

The National Library of Medicine is pleased to announce a new Student Code Program, designed to make it possible for an increased number of students to access and search most of NLM's databases at reduced rates. Students enrolled in a wide range of educational programs, high school through professional residencies in the United States, are eligible. Two types of student programs are offered:

- 1) A student who is enrolled in graduate or professional school or in a residency program may apply for an Individual Student Code. This code will be active for two years and the student is responsible for all charges incurred. At the end of two years the code will be converted to regular billing.
- 2) Institutional Student Codes may be obtained by educational institutions from high school through university level and for hospitals providing residency programs. Institutions may request one or more codes to be used by one or more students. The name and educational level of each student using a code is requested. Institutional Student Codes are effective for one year but may be renewed by the institution. An institution may provide an Institutional Student Code to an individual for as long as the individual is a student at the institution. Institutions may set a limit on the number of hours their codes may be used.

Student Codes are billed at approximately 50% of the regular prime time and non-prime time NLM MEDLARS online charges. (For MEDLINE® student use, this will be approximately \$12.00 per hour prime time and \$8.00 per hour non-prime time.) Offline prints are billed at the regular rates. Royalty charges for CHEMLINE®, TOXLIT, and TOXLIT65 apply.

TOXNET databanks, PDQ® and MEDLEARN® are not searchable with the Institutional Student Codes but may be searched using the Individual Student Codes. This is because code usage limits can presently be set only for ELHILL® databases. NLM is working towards offering access to all MEDLARS systems/databases in the future. Individual student codes can access any system/database because they are not subject to usage limits. All students may use their codes with the GRATEFUL MED™ software.

Schools currently participating in NLM's Educational Code Program will be transferred to the Student Code Program. Individual students who already have their own access codes should contact NLM (see below) to obtain the forms necessary to switch from regular billing to reduced billing for two years. The code concerned must be identified to NLM when the paperwork is returned.

Students and institutions interested in applying for this program should request a Student Code Application from: MEDLARS Management Section, National Library of Medicine, 8600 Rockville Pike, Bethesda, MD 20894. Phone: M-F, 8:30 a.m. - 5:00 p.m. ET at (800) 638-8480 (outside Maryland) or (301) 496-6193.

MEDLINE SURVEY ANNOUNCED

NLM is conducting a survey of individuals (physicians, researchers, etc.) who search MEDLINE on the NLM computer without the aid of a search intermediary. A questionnaire will be mailed to these individuals to obtain more detailed information on this growing user population. NLM is interested in learning how these individuals use MEDLINE, their level of satisfaction with the system, and their views on how it can be improved. Questionnaires will be mailed in late September.

NIOSHTIC Records Added to TOXLINE

Jeanne C. Goshorn
Chief, Biological Information Services Section, SIS

A new subfile comprised of that portion of the NIOSHTIC file created by NIOSH from January 1984 through June 1987 was added to TOXLINE with the first post-regeneration update on August 30, 1987. This subfile, which has a subfile acronym of "NIOSH" in the Secondary Source Identification (SI) field, contains 38,457 references on occupational health and safety gathered by the National Institute for Occupational Safety and Health (NIOSH) and added to their NIOSHTIC (NIOSH Technical Information Center) database since January of 1984. Coverage of the subfile includes over 150 current journals in health and safety and related subject areas, selected NIOSH publications,

and some references gathered in the creation of NIOSH documents. Quarterly updates of about 3,000 records are anticipated. Subjects covered by the new subfile come from a wide area related to occupational safety and health, such as behavioral sciences, epidemiology, hazardous wastes, occupational medicine, safety and health programs, and many aspects of toxicology.

A sample record from the NIOSHTIC information on TOXLINE is shown in Figure 1. The NIOSHTIC number for a reference is carried in the TOXLINE SI field following the subfile acronym "NIOSH", with a slash separating the acronym from the number. NIOSH's internal document control number is carried as the first TOXLINE Keyword (KW), following "DCN-". Additional keywords may include subject terms used by NIOSH in indexing the document, an NTIS or CIS accession number, if present, and additional special indexing terms used for NIOSH documents such as Health Hazard Evaluations or technical reports.

TI - Mortality and Cancer Incidence Among Workers in an Abrasive Manufacturing Industry

SO - British Journal of Industrial Medicine, Vol. 44, No. 1, pages 57-59, 4 references, 1987

CD - BJIMAG

AB - A survey of mortality and cancer incidence among workers in an abrasive manufacturing industry (SIC-3291) was conducted. The cohort consisted of 521 males employed for at least 5 years between 1955 and 1983 at a Swedish facility that manufactured grinding wheels using aluminum-oxide (1344281) and silicon-carbide (409212). Some grinding wheels were bound by formaldehyde (50000) containing resins. Vital status of the cohort as of December 31, 1983, was determined. Underlying causes of death were determined from the National Death Register and National Cancer Registry. Expected incidences were calculated using incidence rates for the general Swedish population. Company industries ranged from 0.1 to 1.0mg/m3; however, intermittent heavy exposures to formaldehyde, up to 20 to 30mg/m3, short occurred. No significant increases in total mortality, cancer mortality, or incidence of nonmalignant respiratory disease was found. There was no association between degree of exposure to formaldehyde and cancer. One case of nasopharyngeal cancer occurred; however, it was associated with a low exposure, less than 0.1mg/m3, to formaldehyde for a relatively short time, around 5 years. The authors conclude that the study shows no evidence for an increased mortality or cancer morbidity associated with manufacturing abrasives.

VERSION 2.0

[Editor's Note: Each month the NLM Technical Bulletin features a column of questions/answers concerning GRATEFUL MED. Contributions for this column will be appreciated.]

At our institution, we have multiple GRATEFUL MED users, so being able to designate a file to hold search results can be a real plus. However, if we transfer the search results to a file and use the asterisk option to bypass making relevancy judgments, is there any way to use GRATEFUL MED to edit and print those results at a later time?

When you use the transfer capability to move your citations to another file, the citations are reformatted and cannot be reviewed individually for relevancy at a later time. You can, however, copy the results of your search from a file named OUTPUT before they are reformatted and then recopy them

into the OUTPUT file later to screen for relevancy.

The instructions for copying your results before they are reformatted are found in Part 3 of the *User's Guide*, pages 59-61 "Saving OUTPUT Files for Later Use," and "Managing Backfile (older material) Retrieval."

After I have downloaded citations, how can I edit within citations or rearrange the order of the parts of the citation, e.g., author, journal source, etc.?

You cannot "rearrange" a citation using GRATEFUL MED; however, you can copy your downloaded files into a text editing or text management type of software designed to do that. This is another instance where you may want to copy the citations before GRATEFUL MED reformats them, in which case you should also review the instructions in Part 3, pages 59-61. It is usually easier to manipulate data if it resides in a tagged format labelled by data element abbreviations rather than a paragraph format. (See Figure 1.)

GRATEFUL MED users should also note the following articles and/or features in this issue:

Training Program Changes
Continued from page 1.

II. ADVANCED ONLINE SERVICES TRAINING CLASS - NEW NAME, REVISED CURRICULUM

A number of changes are taking place with the Advanced Online Services Training Class. The first is a change in title to reflect more accurately the content of the course. The new title is the "Follow-Up to the Fundamentals of MEDLARS Searching," or the "Follow-Up" as the shortened version. In the past, the Advanced Online Training was somewhat of a misnomer. This was because no previous basic instruction had been provided in the Initial Class for many of the databases covered. Therefore, it was misleading to tag these modules as "advanced" techniques.

Beginning in 1988, the "Follow-Up" classes will be taught by NLM instructors in Bethesda and also by the trainers at the three Regional Medical Library Online Training Centers (New York Academy of Medicine, University of Nebraska, and University of California at Los Angeles) in each of the seven regions. The number of classes has been increased to include nine classes at sites other than the five at NLM.

Perhaps the most significant change to this class is the revision of the course content agenda. The new class will consist of six modules, each with hands-on exercises. They are as follows:

A. Module 1 - Enhanced Skills in Searching MEDLINE/MeSH/HEALTH

This one-day module will begin by providing a refresher of the technical ELHILL commands focusing on the MEDLINE database. Advanced skills in searching MEDLINE will be presented as well as a discussion of the HEALTH PLANNING AND ADMINISTRATION File. The MeSH Vocabulary File will be discussed in detail providing an insight as to its usefulness in MEDLINE searching. Hands-on exercises will accompany each lecture of every module.

B. Module 2 - Cancer Information Searching

This half-day module will cover all aspects of searching the cancer databases, CANCERLIT® and CLINPROT®, as well as the PDQ system.

C. Module 3 - POPLINE /BIOETHICS /HISTLINE® Searching

Information on these specialized databases will be presented. This module will occupy a three-hour time slot.

D. Module 4 - Searching the Technical Services Databases

During this day-long module, all of the techniques necessary to effectively search the CATLINE®, NAF®, AVLINE®, and SERLINE® databases will be presented.

E. Module 5 - Enhanced Skills in Searching CHEMLINE/TOXLINE/TOXLIT

Information and advanced techniques of searching the chemical and toxicological databases on the ELHILL system will be presented in this one-day module.

F. Module 6 - Tips and Techniques for TOXNET Searching

During this one-day session, a comprehensive discussion will be held on the CCRIS®, HSDB, and RTECS databases to inform searchers about the special features available through TOXNET.

As before, the modular approach allows searchers to choose the topics which are most applicable to their needs. One or more of the six modules may be taken, but all require previous training and/or searching on the MEDLARS databases.

The six modules of the "Follow-Up" class will be taught during fourteen week-long sessions in 1988. In addition, by request, these modules can be taught as discrete workshops by the Online Trainers from the three RML Online Training Centers. If an organization or group is interested in sponsoring a local offering of one or more of the "Follow-Up" modules, a representative of the group should contact the Online Training Center at the Regional Medical Library serving that geographic area. Information about charges, scheduling, and availability can be provided by the Regional Online Trainers.

III. BACK TO THE FUNDAMENTALS: A SEARCH WORKSHOP

In 1988 a new class entitled, "Back to the Fundamentals: A Search Workshop," will be designed and presented by the Regional Medical Library Online Trainers. This

Search Workshop is intended to inform search analysts of the highlights of new ELHILL search techniques, commands, MeSH vocabulary changes, etc., as well as provide "refresher" information for those searchers who have been previously trained or who have acquired experience simply by searching the MEDLARS databases. A basic understanding of ELHILL will be required before attending "Back to the Fundamentals."

The Search Workshop will last approximately four hours and will be taught at sites determined by the Regional Online Trainers in conjunction with NLM. The schedule of Search Workshops will be published in the *NLM Technical Bulletin* as soon as it is available. Unlike the "Fundamentals of MEDLARS Searching" and the "Follow-up," a fee (still to be determined) will be charged for attendance at the Search Workshop.

It is anticipated that such a class will provide a much needed forum for MEDLARS searchers to meet and discuss online searching of the NLM databases. The intent is to design a standard, structured curriculum which would be taught throughout the country and revised each year. Medical Library Association (MLA) Continuing Education Credit will be available for Search Workshop attendees. Further details on this new Search Workshop will be made available in future issues of the *NLM Technical Bulletin*.

Please refer to the article in this issue entitled, "NLM Online Training Program 1988," for the complete schedule of "Fundamentals of MEDLARS Searching" and the "Follow-Up to the Fundamentals" classes with application instructions.

NLM Online Training Program 1988

Patricia C. Buchan
MEDLARS Management Section, NLM

The schedule of NLM Online Services Training classes has been announced for 1988 and is reproduced on page 13. During the coming year, a total of 36 "Fundamentals of MEDLARS Searching" classes will be held throughout the United States. (See the article in this issue entitled, "NLM Training Program Changes.") Twenty-four of these will be held at sites other than NLM. This year there will be fourteen offerings of the "Follow-Up to the Fundamentals of MEDLARS Searching" classes. Five of these will be taught at NLM, and nine will be taught regionally.

Every attempt will be made to place training applicants in a class being taught in the location nearest to them. If a class is filled, the applicant will be notified and placed on a waiting list for that site. Because many of the 1987 classes have been filled, a number of applicants have already been placed on a waiting list for 1988 classes. These applicants will receive first priority when the scheduling process for 1988 begins.

HOW TO APPLY

To apply for either the "Fundamentals of MEDLARS Searching" or the "Follow-Up" class, interested searchers

should complete the "Request for NLM Online Training" (found in Appendix B). The same form is used when applying for either class; however, only one type of class can be requested per form. Applicants should remember to indicate the modules of the "Fundamentals" or the "Follow-Up" classes that they plan to attend as well as the preferred site and dates of the training class.

Please note: In order to take Modules II or III of the "Fundamentals" class, it is necessary to have completed Module I either during the same week or during a previous "Fundamentals" or Initial Training class. Also, searchers who apply for the "Follow-Up" class should have previously attended the "Fundamentals" or Initial Training class or have experience searching the MEDLARS databases.

It is necessary to have a MEDLARS User ID code before attending an NLM training class. An application for access can be requested through the MEDLARS Service Desk. No more than one person per MEDLARS User ID code will be scheduled into a particular class (except where last-minute space becomes available).

All classes on the schedule are considered "tentative" pending sufficient enrollment (a minimum of 12 attendees) by approximately one month before the class. The revised application form for training can be found in Appendix B of this issue. Please make photocopies of this form for future requests.

Monthly Search Hint:

The TREE Command

The TREE command can be extremely useful when EXPLODing headings that are found in more than one MeSH category or that are found in more than one position in the same MeSH category. For example, as shown in Figure 1, EXPLODE NOSE results in a Multi-Meaning (MM) message because that heading is found in two places in the *Tree Structures*. There are three responses to this Multi-Meaning message: number, none, or expand. These are explained below:

NUMBER - Type only one number. If more than one number is typed, the program will return postings for the first number in the display.

NONE - Postings are actually given for the first meaning.

EXPAND - Displays MeSH headings one level broader than the one being EXPLODED.

Often it takes more information than the broader term to decide which tree number to pick for the explosion. The specific indented headings are usually more important in this decision process. To see the indentions, either look them up in the printed *Tree Structures* or use the TREE command online. As seen in Figure 1, TREE NOSE results in a Multi-Meaning message as well. Most often the response to this Multi-Meaning message will be ALL. As shown in Figure 1, the computer displays the hierarchical positions of the specified heading within the *Tree Structures* by printing the more general term under which the requested heading is indented, the heading itself, and any subordinate term(s), as well as the MeSH tree number for each heading listed.

A plus sign after a heading indicates that there are other MeSH headings at more specific levels of indention. To see these issue another TREE command.

EXPLODE the desired tree number after comparing the two trees for NOSE to complete the search. This avoids the Multi-Meaning message.

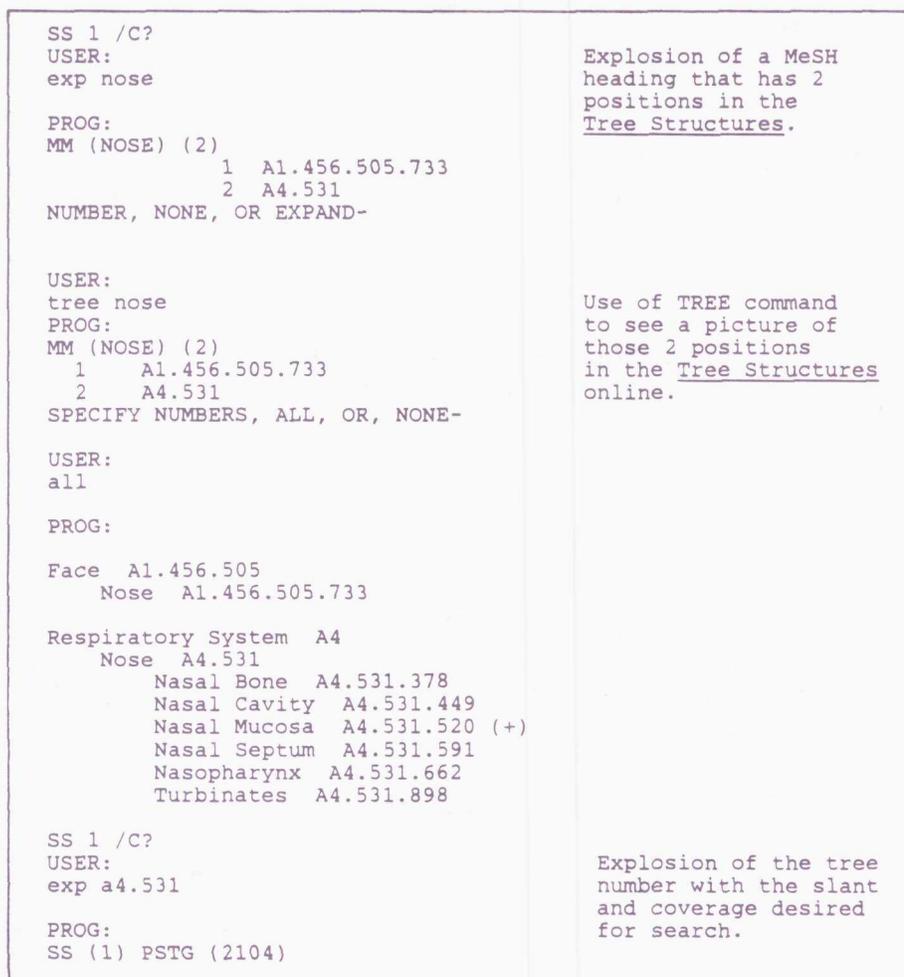

Figure 1

Serials Update

INDEXED TITLES UPDATE, SEPTEMBER 1987

The following titles cited in MEDLINE, HEALTH, and POPLINE have recently been selected for indexing, undergone a title change, or ceased publication. This list is not cumulative; the information provided is only for titles whose status has changed since the

last UPDATE. More detailed information may be found in SERLINE. For further information, please contact MMS or Ms. Esther Baldinger, (301) 496-1276, Technical Services Division, NLM.

MEDLARS® PRICING SCHEDULE

NLM DOMESTIC AND NON-U.S. CHARGES AND MINIMUMS FOR ONLINE SERVICES
AND LEASING TAPE COPIES OF DATABASES
EFFECTIVE OCTOBER 1, 1987

Database	Online Charges		Leased Tape Charges	
	Domestic 1/	Non-U.S. 2/	Domestic 3/	Non-U.S. 4/
AVLINE®	Online Algorithm	No minimum; usage charges only	5/Base file: (up to current year) \$1,000 Current year: \$1,000/yr; updated monthly No usage charges	5/Base file: (up to current year) \$1,250 Current year: \$1,250/yr; updated monthly No usage charges
BIOETHICSLINE®	Online Algorithm	\$1,000/yr minimum	\$1,000/yr minimum	\$1,000/yr minimum
CANCERLIT®	Online Algorithm	\$3,000/yr minimum	\$3,000/yr minimum	\$3,000/yr minimum
CATLINE®	Online Algorithm	No minimum; usage charges only	5/Base file: (1965 up to the current year) \$3,000 Current year: \$4,000/yr; updated weekly or Current year: \$2,000/yr; updated monthly Retrospective file: (Pre-1965) \$3,000 No usage charges	5/Base file: (1965 up to the current year) \$3,750 Current year: \$5,000/yr; updated weekly or Current year: \$2,500/yr; updated monthly Retrospective file: (Pre-1965) \$3,750 No usage charges

NLM DOMESTIC AND NON-U.S. CHARGES EFFECTIVE OCTOBER 1, 1987

Database	Online Charges		Leased Tape Charges	
	Domestic 1/	Non-U.S. 2/	Domestic 3/	Non-U.S. 4/
CHEMICAL CARCINOGENESIS RESEARCH INFORMATION SYSTEM (CCRIS)	8/Online Algorithm	9/\$2,500/yr minimum	Availability and Prices to be announced January 1, 1988	
CHEMLINE®	6/Online Algorithm	7/\$1,000/yr minimum	7/\$1,000/yr minimum	7/\$1,000/yr minimum
CLINPROT®	Online Algorithm	\$1,000/yr minimum	\$1,000/yr minimum	\$1,000/yr minimum
DIRLINE®	Online Algorithm	\$1,000/yr minimum	Not available	Not available
HAZARDOUS SUBSTANCES DATA BANK (HSDB®)	8/Online Algorithm	9/\$2,500/yr minimum	Availability and Prices to be announced January 1, 1988	
HEALTH PLANNING	Online Algorithm	\$3,000/yr minimum	\$3,000/yr minimum	\$3,000/yr minimum
HISTLINE®	Online Algorithm	\$1,000/yr minimum	\$1,000/yr minimum	\$1,000/yr minimum
INFORM	Online algorithm excluding the charge for cita- tions and characters; no offline processing	No minimum or flat rate; online algorithm excluding the charge for cita- tions and characters; no offline processing	Not available	Not available

NLM DOMESTIC AND NON-U.S. CHARGES EFFECTIVE October 1, 1987

Database	Online Charges		Leased Tape Charges	
	Domestic 1/	Non-U.S. 2/	Domestic 3/	Non-U.S. 4/
INTROMED [®]	Online algorithm excluding the charge for citations and characters; no offline processing	No minimum or flat rate; online algorithm excluding the charge for citations and characters; no offline processing	\$1,000/yr; no usage charges	\$1,250/yr; no usage charges
INTROTOX	8/Online algorithm for connect time only; no offline processing	9,10/No minimum or flat rate; online algorithm for connect time only; no offline processing	Not available	Not available
MEDLEARN [®]	\$23.50/hr prime time; \$16.50/hr non-prime time; no offline processing	11/No minimum; \$26.50/hr prime time; \$19.50/hr non-prime time; no offline processing	Not available	Not available
MEDLINE [®] & BACKFILES	Online Algorithm	\$15,000/yr minimum	17/Base file: (1966 up to the current year) \$10,000 /yr minimum 17/Current year: \$5,000/yr minimum	Base file: (1966 up to the current year) \$10,000 /yr minimum Current year: \$5,000/yr minimum
MESH VOCABULARY FILE [®]	Online Algorithm	No minimum; usage charges only	\$1,000/yr; no charge with MEDLINE; no usage charges	\$1,250/yr; no charge with MEDLINE; no usage charges
NAME AUTHORITY FILE [®]	Online Algorithm	No minimum; usage charges only	\$1,000/yr; no usage charges	\$1,250/yr; no usage charges

NLM DOMESTIC AND NON-U.S. CHARGES EFFECTIVE OCTOBER 1, 1987

Database	Online Charges		Leased Tape Charges	
	Domestic 1/	Non-U.S. 2/	Domestic 3/	Non-U.S. 4/
PDQ®	\$23.50/hr prime time; \$16.50/hr non-prime time; no offline processing	11/\$1,000/yr minimum; \$26.50/hr prime time; \$19.50/hr non-prime time; no offline processing	18/Not available from NLM	18/Not available from NLM
POPLINE	Online Algorithm	\$2,000/yr minimum	\$2,000/yr minimum	\$2,000/yr minimum
RTECS®	12/Online Algorithm	13/\$1,000/yr minimum	14/\$1,000/yr minimum	15/\$1,000/yr minimum
NOTE: NLM expects to move RTECS to the TOXNET system in the Fall of 1987 where it will be charged under the general TOXNET rate structure. The ELHILL version of RTECS is expected to be discontinued in December 1987.				
SDILINE®	Online Algorithm	No minimum; usage charges only	\$5,000/yr minimum (if leased separately from MEDLINE)	\$5,000/yr minimum (if leased separately from MEDLINE)
SERLINE®	Online Algorithm	No minimum; usage charges only	\$1,000/yr; no usage charges	\$1,250/yr; no usage charges
TOXLINE®	Online Algorithm	\$2,500/yr minimum	\$2,500/yr minimum	\$2,500/yr minimum
TOXLIT & BACKFILE	16/Online Algorithm	7/\$2,500/yr minimum	7/Current file: (1981 through the current year) \$2,500/yr minimum Backfile: (1965-80) \$2,500/yr minimum	7/ Current file: (1981 through the current year) \$2,500/yr minimum Backfile: (1965-80) \$2,500/yr minimum

NOTES: In addition to the above rates, the following charges apply to each Domestic and Non-U.S. Online Center: \$1 per Offsearch per file: and \$1 per Automatic SDI. Automatic SDI searches on the TOXLIT database are \$4.00 for domestic users (\$1.00 plus \$3.00 royalty). In general, non-U.S. online users incur charges under the online pricing algorithm and are charged \$3.00 extra on the connect charge portion and \$0.10 extra per offline page, and are not charged amounts designated as royalties. These royalties are negotiated separately with and paid by the International Online MEDLARS Centers directly to the database producers for TOXLIT, TOXLIT65, and CHEMLINE and not to NLM.

A Tape License Agreement packet is available upon written request to the Associate Director, Library Operations, National Library of Medicine, Bethesda, MD 20894. For a fee of \$25.00, a sample tape is also available upon written request in advance of signing a license agreement. In addition, NLM offers a Subset Tape Program; see Note 17.

- 1/ ELHILL online charges for domestic users are calculated by using an algorithm which includes connect hour charges and charges for search statements, citations, interactions (i.e., carriage returns), computer resources (i.e., disk accesses), and characters transmitted to the user's terminal. Unless otherwise noted, the connect hour charge portion of the algorithm is \$7.85/hour prime time and \$5.10/hour non-prime time, and the offline print charge is \$0.25 per page. Details of the entire algorithm follow these notes.

- 2/ ELHILL online charges for non-U.S. users are calculated by using an algorithm which includes connect hour charges and charges for search statements, citations, interactions (i.e., carriage returns), computer resources (i.e., disk accesses), and characters transmitted to the user's terminal. Each database, except the technical databases (AVLINE, CATLINE, NAME AUTHORITY, and SERLINE), the MESH VOCABULARY file, MEDLEARN and the INFORM and INTROMED databases, has a minimum against which usage is charged. Unless otherwise noted, the connect hour charge portion of the algorithm is \$10.85/hour prime time and \$8.10/hour non-prime time, and the offline print charge is \$0.35 per page. Usage over the minimum will be calculated at the rate of the file being accessed. The dollar equivalent of usage over the minimum on one file will be applied to the minimum for the other file(s). Usage on technical databases, the MESH VOCABULARY File, MEDLEARN, INFORM and INTROMED may not be applied to minimums on other databases. Details of the entire algorithm follow these notes.

- 3/ ELHILL tape charges for domestic users consist of an annual minimum charge for each database except the technical databases (AVLINE, CATLINE, NAME AUTHORITY, and SERLINE), the MESH VOCABULARY File, MEDLEARN, and INTROMED. Unless otherwise noted, usage charges of \$4.00/connect hour and \$0.01/offline citation are applied to the annual minimum. (The use charge is \$3.00/connect hour between 6:00 p.m. and 6:00 a.m. local time Monday through Friday, and all day Saturday and Sunday. This time period is referred to as tape non-prime time.)

Usage over the minimum will be charged the rate of the file being accessed. For institutions or organizations leasing two or more files with a minimum plus usage, the dollar equivalent of usage over the minimum for one file may be applied to the minimum for the other file(s).

An annual flat fee, with no usage charges, will be charged for each of the technical databases (AVLINE, CATLINE, NAME AUTHORITY, and SERLINE), the MESH VOCABULARY File, and INTROMED. Usage on other leased databases may not be applied to these annual flat rate fees.

Domestic centers providing service to non-U.S. users will be charged at the non-U.S. rate for this portion of their service.

Extra charges are levied for class-maintained files or special formats. Prices for files and formats currently available are:

SDILINE GENER FORMAT	\$1,000/year
CLASS-MAINTAINED MEDLINE DATA:	
Complete Database Replacement Copies	\$3,000/year
Changed Records Only	\$1,000/year

Charges for physical tapes and shipping are included in the minimum charges for each database.

- 4/ Tape charges for non-U.S. users and the portion of non-U.S. use provided by domestic centers consist of an annual minimum charge for each database except the technical databases (AVLINE, CATLINE, NAME AUTHORITY, and SERLINE), the MESH VOCABULARY File, and INTROMED. Unless otherwise noted, usage charges of \$7.00/connect hour and \$0.03/offline citation are applied to the annual minimum. (The use charge is \$6.00/connect hour between 6:00 p.m. and 6:00 a.m. local time Monday through Friday, and all day Saturday and Sunday. This time is referred to as tape non-prime time.) Usage over the minimum will be charged the rate of the file being accessed. For institutions or organizations leasing two or more files with a minimum plus usage, the dollar equivalent of usage over the minimum for one file may be applied to the minimum for the other file(s).

An annual flat fee, with no usage charges, will be charged for each of the technical databases (AVLINE, CATLINE, NAME AUTHORITY, and SERLINE), the MESH VOCABULARY File, and INTROMED. Usage on other leased databases may not be applied to these annual flat-rate fees.

Extra charges are levied for class-maintained files or special formats. Prices for files and formats currently available are:

SDILINE GENER FORMAT	\$1,000/year
CLASS-MAINTAINED MEDLINE DATA:	
Complete Database Replacement Copies	\$3,000/year
Changed Records Only	\$1,000/year

Charges for physical tapes and shipping are included in the minimum charges for each database.

- 5/ Available in ELHILL or MARC version except for weekly updates of the current-year CATLINE file which are available only in MARC.
- 6/ CHEMLINE royalty charges of \$0.25 per citation and \$54.00 per hour of connect time are added to the algorithm. Offline page charges of \$1.53 per page include \$1.28 per page royalty. Royalty charges are subject to change without advance notice.
- 7/ CHEMLINE, TOXLIT, and TOXLIT65 royalties are not paid to NLM but are negotiated with and paid directly to file content providers such as CAS, BIOSIS and ASHP.
- 8/ TOXNET (HSDB, CCRIS, RTECS, & INTROTOX) online charges are calculated for domestic users by using an algorithm which includes connect hour charges and charges for search statements, interactions (i.e., carriage returns) and characters created for transmission to the user's terminal. (INTROTOX is charged only the connect hour portion.) Unless otherwise noted, the connect hour portion of the algorithm is \$10.00/hour prime time and \$8.00/hour non-prime time, and the offline print charge is \$0.25 per page.
- 9/ TOXNET (HSDB, CCRIS, RTECS, & INTROTOX) online charges are calculated for non-U.S. users by using an algorithm which includes connect hour charges and charges for search statements, interactions (i.e., carriage returns), and characters created for transmission to the user's terminal. (INTROTOX is charged only the connect hour portion.) For Fiscal Year 1988, one minimum of \$2,500 will be charged for the HSDB and CCRIS files, and a second minimum of \$1,000 will be charged for RTECS, for a total minimum of \$3,500. As other files are added to the TOXNET system, individual minimums will be established for each file. Unless otherwise noted, the connect hour portion of the algorithm is \$13.00/hour prime time and \$11.00/hour non-prime time, and the offline print charge is \$0.35 per page. Usage over the minimum charges will be calculated at the rate of the file being accessed. The dollar equivalent of usage over the minimum on each of these files (except INTROTOX; see Note 10) may be applied to the minimum for other MEDLARS databases on either ELHILL or TOXNET.
- 10/ INTROTOX may only be requested if the HAZARDOUS SUBSTANCES DATABANK has been requested. Usage on INTROTOX may not be applied to a minimum on any other MEDLARS database. Online charges for non-U.S. users are \$13.00/hour prime time and \$11.00/hour non-prime time.
- 11/ Usage is charged separately, i.e., usage on this file may not be applied to the aggregate minimum charges.
- 12/ On ELHILL, the online algorithm for RTECS for domestic users includes connect charges of \$5.10 per hour non-prime time and \$7.85 per hour prime time; offline prints are \$0.25 per page. On TOXNET, the online algorithm includes connect charges of \$8.00 per hour non-prime time and \$10.00 per hour prime time; offline prints are \$0.25 per page.

- 13/ On ELHILL, the online algorithm for RTECS for non-U.S. users includes connect charges of \$8.10 per hour non-prime time and \$10.85 per hour prime time; offline prints are \$0.35 per page. On TOXNET, the online algorithm includes connect charges of \$11.00 per hour non-prime time and \$13.00 per hour prime time; offline prints are \$0.35 per page.
- 14/ For domestic ELHILL RTECS tape users, usage charges of \$22/connect hour and \$0.17/offline citation are applied to the annual minimum. (The use charge is \$21/connect hour during tape non-prime time -- see Note 3.)
- 15/ For non-U.S. ELHILL RTECS tape users, usage charges of \$25/connect hour and \$0.19/offline citation are applied to the annual minimum. (The use charge is \$24/connect hour during tape non-prime time -- see Note 4.)
- 16/ TOXLIT royalty charges of \$0.21 per citation and \$68.60 per hour of connect time are added to the basic online algorithm. Offline page charges of \$0.92 per page include \$0.67 per page royalty. Royalty charges are subject to change without advance notice.
- 17/ MEDLINE data are also available under the NLM Subset Program for domestic users. A subset information packet is available upon request from MEDLARS Management Section, National Library of Medicine, Bethesda, MD 20894. Prices are prorated on the amount of data received and a flat-rate option is also available to qualified users. The detailed "Charges for Subsets" is included at the end of this pricing schedule.
- 18/ Contact the International Cancer Research Data Bank (ICRDB) at the National Cancer Institute (NCI) for information on leasing PDQ on tape.

Charges For Subsets

Subsets are available on magnetic tape from the MEDLINE database and its Backfiles. All charges include a copy of the MESH Vocabulary File if requested.

"Personal Use" Subsets: There is an annual limit of 150,000 citations.

- I. Individualized Subsets: annual subscription to the current year and Backfiles -- \$1,500/year flat rate. Charges include monthly updates and annual replacement tape(s) for which maintenance and error correction have been performed.
- II. Custom Subsets: one-time retrieval from current year and Backfiles -- \$500 flat rate; no updates provided.

"Individualized Multiple Use" Subsets: Charges include monthly updates and annual replacement tape(s) for which maintenance and error correction have been performed.

- I. Option A: Annual minimum with use charge. (The use charge offsets the annual minimum charge. If the use is a dollar equivalent less than the minimum, the minimum is paid. If the actual use is a dollar equivalent more than the minimum, the dollar equivalent is paid.)

A. Current Year Annual Subscription

- 1. Annual Minimum Charge is dependent upon the percentage of the current year's MEDLINE data received:

up to 25% file:	\$1,250
26% to 50% file:	2,500
51% to 75% file:	3,750
76% to 100% file:	5,000

- 2. Use charges offset annual minimum: \$4 per connect hour during prime time and \$3 per hour during non-prime time (6:00 pm to 6:00 am local time Monday through Friday, and Saturday, Sunday, and holidays) PLUS \$0.01 for each citation printed offline at the host computer.

B. Backfiles Annual Subscription

1. Annual Minimum Charge is dependent upon the percentage of data from 1966 up to the current year received:

up to 25% file:	\$2,500
26% to 50% file:	5,000
51% to 75% file:	7,500
76% to 100% file:	10,000

2. Use charges offset annual minimum: as described for Current Year Annual Subscription

II. Option B: Flat Rate

Under certain circumstances, a flat rate pricing option is available for an institution/organization which does not vend a database service. In order to qualify for the flat rate, the institution/organization must limit access to either academically affiliated institutions or corporate members of the organization which are located within a "reasonable geographic distance" (usually interpreted to be within the confines of the local region's telephone area code). Alternatively, if the institution/organization does not anticipate having sufficient use to warrant paying the flat rate, it may offset the minimum annual charge by \$4 per connect hour with no charges for citations printed offline (as a second option to the annual minimum use charges described in Section I.A.2 above).

A. Current Year Annual Subscription

Charges are not dependent upon the size of the file. There is a \$10,000 annual flat rate which includes one academically affiliated institution. An additional annual charge of \$1,000 is made for each additional academically affiliated institution to which service is provided.

B. Backfiles Annual Subscription

Annual flat rate is dependent upon the size of the subset licensed. For MEDLINE data from 1966 up to the current year:

up to 25% file:	\$2,500
26% to 50% file:	5,000
51% to 75% file:	7,500
76% to 100% file:	10,000

* Average searcher charges per hour may differ according to computer resources used and citations and characters printed online.

** Includes royalty charges of \$68.60 per connect charge and \$0.21 per citation charge for TOXLIT and its Backfile (TOXLIT65).

***Includes royalty charges of \$54.00 per connect charge and \$0.25 per citation for CHEMLINE.

NLM OFFLINE CHARGES TO DOMESTIC USERS ^{1/}

<u>Pages</u>	<u>Per Page</u>
MEDLINE and other databases	\$0.25
TOXLIT	0.92 (Includes \$0.67 royalty charge per page)
CHEMLINE	1.53 (Includes \$1.28 royalty charge per page)
TOXNET (HSDB, RTECS or CCRIS)	0.25
<u>Offsearches</u>	<u>Per File</u>
All Databases	\$1.00 (plus page charges)
<u>Automatic SDI Searches</u>	
SDILINE, HEALTH, AVLINE, CATLINE, CANCERLIT, POPLINE, TOXLINE	\$1.00 (plus page charges)
TOXLIT	4.00 (plus page charges; includes \$3.00 royalty charge)

Current prime time is 10:00 AM to 5:00 PM Eastern Time, Monday through Friday. All other time is non-prime.

^{1/}Non-U.S. online users incur charges under the online pricing algorithm and are charged \$3.00 extra on the connect charge portion and \$0.10 extra per offline page, and are not charged amounts designated as royalties. These royalties are negotiated separately with and paid by the online International MEDLARS Centers directly to the database producers for TOXLIT, TOXLIT65, and CHEMLINE and not to NLM.

USER:
UNITED STATES (PX)

Note that this differs from the pre-explosion UNITED STATES MC (PX) which retrieves citations to articles about the United States or any of its States rather than citations to articles published there.

In SDILINE citations to articles published in a single country may be retrieved by using the name of the State or Country with the qualifier (CY), but to explode a place of publication you must use the strategy EXP Z...: (ZN) just as in MEDLINE.

7.4 SPECIAL FEATURES OF SEARCHING MEDLINE

Subject searching in MEDLINE may be accomplished in two ways: by using the controlled MeSH vocabulary, including the MeSH Chemical Records, and by "free-text" searching, using Text Words. This dual capability is known as "two-tiered" searching. Other capabilities which may be used to make MEDLINE searching easier and more efficient include SAVE/SAVESEARCH, STORESEARCH, OFFSEARCH, stored addresses, and Automatic SDI Service.

7.4.1 CONTROLLED VOCABULARY SEARCHING - MEDICAL SUBJECT HEADINGS

Each item to be input to the MEDLINE database is examined by an Indexer, who assigns MeSH headings. Thus, an item can be retrieved by subject whether or not a particular word appears on the title or abstract.

Searching with MeSH headings gives the searcher four capabilities for enhancing both retrieval and relevance:

1. It enables the searcher to limit retrieval to those citations in which the heading searched is the point of the article by applying a central concept indicator (*) to the heading. An article indexed, for instance, *MARFAN SYNDROME will be about Marfan syndrome, whereas an article indexed merely MARFAN SYNDROME may deal only incidentally with the Marfan syndrome.
2. It enables the searcher to zero in on a specific aspect of a subject by searching a main heading/subheading combination, with or without a central concept indicator. A citation retrieved by searching *MARFAN SYNDROME/EN will certainly deal primarily, if not entirely, with the enzyme defect in Marfan syndrome.
3. It enables the searcher to use the EXPLODE capability, with or without a central concept indicator and with or without subheadings, to retrieve all articles indexed to a broad term as well as those indexed to the more specific terms indented under the broad term in the MeSH Tree Structures. For instance, the strategy

EXP *COLLAGEN DISEASES/EN

will retrieve articles about the enzyme defects in any collagen disease, including Marfan syndrome.

4. It enables the searcher to do global searches on very large subjects by using pre-explosions, with or without a central concept indicator. Pre-explosions (a list of which appears in APPENDIX C of this Chapter) can be used with subheadings, but the subheadings must be ANDed with the pre-explosion:

*NEOPLASMS (PX) AND ENZYMOLOGY (SH)

When searching with MeSH terms in the backfiles, it is important to know when a particular term was introduced into the vocabulary; this information is given in the Annotated Alphabetic List. If the specific term in which one is interested has a date in the Annotated Alphabetic List, the term will retrieve nothing before that date, and so one must use a broader term to retrieve citations from earlier years. For example, the term PLANTS, TOXIC was introduced with the 1976 MeSH. To search for this concept before 1976 one must use the broader term PLANTS. According to the table of entry dates found in APPENDIX A of this Chapter, the first date of entry for the 1976 citations (i.e., those indexed using the 1976 vocabulary) is November 20, 1975. The MED75 backfile contains citations entered into the database between December 5, 1974 and November 3, 1976. In order to search for this concept in MED75 both terms would have to be used. However, the searcher would use the ranging capability (see PART 4 of this Manual) to divide the search into two parts: the first year, in which PLANTS was the only term available, and the second year, in which PLANTS, TOXIC was available. The first search statement:

```
SS 1 /C?  
USER:  
PLANTS, TOXIC
```

requires no ranging operation because all possible retrieval is wanted, i.e., any citation indexed with the term PLANTS, TOXIC. The next search statement consists of the broader term PLANTS and a ranging operation to limit the retrieval to those items indexed (and entered into the database) before the more specific term became available:

```
SS 2 /C?  
USER:  
PLANTS AND LESS THAN 751120 (DA)
```

In this way, the amount of material that must be examined for false drops is minimized.

For a complete discussion of the MeSH controlled vocabulary see PART 6 of this Manual.

7.4.2 CONTROLLED VOCABULARY SEARCHING - MESH CHEMICALS

In addition to the subject headings published in Medical Subject Headings and used to index articles for Index Medicus, the MeSH Vocabulary File also contains records for controlled chemical terms which are appended to citations by Indexers. The chemical terms are searchable online, although the citations appear in Index Medicus under the broader MeSH Headings to which the chemical terms are mapped. Online, specific chemicals which are

not MeSH Headings but which are included in the MeSH Vocabulary File, may be searched in MEDLINE. They must be qualified by the mnemonic (NM) whether one searches the form which is in the NM field or the form which is in the SY field in the MeSH Vocabulary File record. The Name of Substance may also be searched by ANDing its separate parts together as Name Fragments (NF). Each Name of Substance, as well as chemicals which are MeSH Headings, may be searched by CAS Registry Number or Enzyme Commission Number, both of which, along with the Name of Substance, appear in the RN field of the MEDLINE record. For details of searching MeSH Chemicals in MEDLINE see the descriptions of the NM and RN data elements in this Chapter as well as PART 6 of this Manual.

7.4.3 TEXT WORD SEARCHING

Significant words from the Title and Abstract fields are available for Text Word searching in MEDLINE. The generation and use of Text Words are fully discussed under TEXT WORD TERM GENERATION and TEXT WORD SEARCHING in PART 4 of this Manual. Text Words are always discrete words; multi-word phrases can never be Text Words. In MEDLINE Text Words must be qualified by the mnemonic (TW) in searching.

It is possible to search for a term as both a Text Word and a MeSH Heading at the same time by preceding the term with the word ALL. If a user searching MEDLINE uses the ALL instruction, e.g., ALL LIVER, the program searches the Index to MEDLINE for that exact term. All occurrences, Text Word, MeSH Heading, Title Abbreviation, Pre-explodings (PX), etc. are retrieved. However, if the term is a "see" reference or an Entry Version, which requires mapping by the MeSH Vocabulary File, the term is not in the Index. Thus, it cannot be retrieved, and the postings may not represent the entire set of possible citations. For this reason, users are advised to use only valid print versions of MeSH descriptors with the ALL instruction. For example, entering the term CANCER will retrieve citations with the descriptor NEOPLASMS, but entering ALL CANCER will retrieve only citations containing CANCER as Text Word or Title Abbreviation; citations indexed to the MeSH term NEOPLASMS will not be retrieved.

7.4.4 STRINGSEARCHING

The techniques and uses of STRINGSEARCHing are discussed at length in PART 4 of this Manual. STRINGSEARCHing is the most expensive technique in searching in terms of the computer resources that it uses. It should never be used until the retrieval set has been narrowed down to as few citations as possible by the use of MeSH Headings and/or Text Words. STRINGSEARCH is an online technique; it should never be used in STORESEARCH or in OFFSEARCH because the the offline search programs will purge any search in which more than 3,000 citations are to be STRINGSEARCHed.

STRINGSEARCH should also never be used in a search which is to be SAVED for execution against a different database either by means of the SAVE or the SAVESEARCH command. (These commands are described fully in PART 5.) When a SAVED search formulation containing a STRINGSEARCH encounters a free-space record, i.e., a pointer to a record which does not exist, the program responds as if a RESTART command had been issued, and all the user's previous interactions are lost. (If you ever receive a WELCOME ... message while you are in the middle of a search, call MEDLARS Management Section immediately.)

SPECIAL YEAR-END PROCESSING ISSUE

This issue of the *NLM Technical Bulletin* contains an expanded Technical Notes section as well as a separate article, concentrating on issues related to Year-End processing. Year-End processing involves large-scale maintenance of MEDLINE®, the MEDLINE Backfiles, HEALTH, and the CANCERLIT® databases, primarily to reflect changes in the MeSH® (Medical Subject Headings) vocabulary. The results of these operations may have a substantial impact on searchers, particularly those with SAVESEARCHes and those who participate in the Automatic SDI program.

Various Technical Notes discuss these changes and operations in detail and include the dates when these changes take effect. Searchers should pay careful attention to these dates in order to plan for the updating of STORESEARCHes.

The Year-End article on page 9, details changes and features of the 1988 system.

Technical Notes

Whenever applicable, the heading of each Technical Note includes a reference to the section of the Online Services Reference Manual 1986 that is considered most relevant to the item being discussed, e.g., (Manual 4.7.2). Users should keep in mind that the item may pertain to other sections as well.

SCHEDULED DOWNTIME DECEMBER 12 & 13

The NLM computer will be unavailable on Saturday, December 12, 1987 and Sunday, December 13, 1987, in order to install the MEDLINE/SDILINE®/BACKFILES, HEALTH and CANCERLIT databases that have been class-maintained with the 1988 Medical Subject Headings. Please see the Technical Notes in this issue titled, "YEAR-END PROCESSING" and "CANCERLIT YEAR-END PROCESSING AND AUTOMATIC SDIS" for additional information about the change to the 1988 databases.

THANKSGIVING HOLIDAY COMPUTER SCHEDULE

The NLM computer will be up on a non-guaranteed basis on Thursday, November 26, 1987, Thanksgiving Day. Neither the computer room nor the MEDLARS® Management Service Desk will be staffed. Non-guaranteed hours will be in effect from 11:15 pm Eastern Time (ET) on Wednesday, November 25, 1987 to 11:15 pm ET on Thursday, November 26, 1987. This means that if the computer fails at any time after 11:15 pm ET on November 25, it is unlikely to be restarted until after 11:15 pm ET November 26. Non-prime rates will be in effect all day. Please note that DOCLINE® will not be available on Thursday, November 26. The TOXNET® computer system status is always guaranteed with non-prime rates in effect on all holidays. Please see the October 1986, *NLM Technical Bulletin*, Appendix C, for the complete 1987 holiday schedule.

POISONOUS PLANTS BIBLIOGRAPHY SUBFILE

The Poisonous Plants Bibliography subfile was added to the TOXLINE® database with the 8709 (EM) update on September 19, 1987. This subfile, which has the acronym "PPBIB" in the Secondary Source Identification (SI) field, contains 2,508 citations on the toxic effects of poisonous plants as reported in the literature prior to 1976. Literature on this topic published after 1976 is covered by other TOXLINE subfiles, so no updates are anticipated. More detailed information about this new subfile will be provided in a forthcoming *NLM Technical Bulletin* article.

1987 BIOETHICS THESAURUS AVAILABLE

The 1987 edition of the *Bioethics Thesaurus*, the controlled vocabulary of keywords used for indexing and searching BIOETHICSLINE®, is now available. It can be purchased for \$5.00 (prepaid, checks made out to the Kennedy Institute of Ethics) from the BIOETHICS Information Retrieval Project, Kennedy Institute of Ethics, Georgetown University, Washington, DC 20057. Terms from this thesaurus are searchable in the KW (Keyword) field of the online database.

TUMOR KEY SUPPLEMENT PRICES

The *Technical Notes: MEDLARS Indexing Instructions, Tumor Key Supplement* prices are incorrect as listed on page 13 of the May 1987 NLM Publications List. The correct prices for this publication are \$8.50 (\$17.00 foreign). The microfiche prices are correct.

CLINPROT® INDEX TERM LISTING

The CLINPROT Index Term listing for September is now available. It may be requested by writing to the MEDLARS Management Section. Please include a self-addressed label with your request. No return postage is necessary.

DATABASE UPDATE SCHEDULE

Appendix B is the Database Update Schedule for 1988. This list includes the schedule for updating the following databases: MEDLINE/SDILINE, HEALTH, POPLINE, CANCERLIT, and TOXLINE/TOXLIT. The list is printed on one side so it can be removed from the issue and posted near the searcher's terminal.

HOLIDAY SCHEDULE 1988

Appendix C is the NLM computer holiday schedule for 1988. The list is printed on one side so it can be removed from the issue and posted near the searcher's terminal.

PHONES LIST

Enclosed with this issue of the *NLM Technical Bulletin* is an updated list of telephone numbers which can be used to access the NLM computers.

YEAR-END PROCESSING

The 1988 MEDLINE and HEALTH files are expected to be available online with January 1988 data on Monday, December 14, 1987. At that time, all searches using MeSH must conform to the *Medical Subject Headings, 1988*. (Please see also the following Technical Note on the availability of CANCERLIT with 1988 MeSH vocabulary.) Changes to the MeSH vocabulary for 1988 are reflected in the various lists contained in the preface to the *Medical Subject Headings--Annotated Alphabetic List, 1988*. This publication has been available from the National Technical Information Service since the end of September; ordering information was given in the September 1987 *NLM Technical Bulletin*, p. 4. Please note that the Introduction has been revised and the pages numbered following the convention of I-1, I-2, etc. rather than Roman numerals for easier reference.

When using these lists, please note that:

- 1) Three of the four lists of new headings ("New Medical Subject Headings with Previous Indexing," "New Medical Subject Headings with Scope Notes," and "New

Medical Subject Headings by Subcategory") contain only those headings that were not in the 1987 MeSH. They do not include new forms of existing headings; these appear in the list titled, "Replaced Medical Subject Headings with Replaced-By Headings."

- 2) Replaced or deleted headings in the list, "Replaced Medical Subject Headings with Replaced-by Headings" followed by the phrase "see reference" may still be used as search terms. Those terms not indicated as a "see reference" may not be used as search terms and must be deleted from all stored and/or saved searches. Terms designated as see references may remain in any stored and/or saved searches. This list is new in format for 1988 and is a merged continuation of two previous lists titled "New Medical Subject Headings Replacing Deleted Headings" and "Deleted Medical Subject Headings with Replaced-by Headings".

- 3) There are two lists of "Topical Subheadings by Category": since 1975, and 1966-74. Before 1975, subheadings were allowed for entire categories, e.g., the subheading "anatomy & histology" could be used with all Category A and Category B MeSH headings. Beginning in 1975, NLM began the practice of restricting some subheadings to use with MeSH headings classified in specific subcategories within a category. For example, the subheading "anatomy & histology" is now restricted within Categories A and B for use with those MeSH headings in Subcategories A1-A10, A13-A16, B1-B2, and B5-B6.

- 4) The list of tree number changes is included as part of the *Medical Subject Headings--Tree Structures, 1988*. Although it is recommended that the MeSH heading terms themselves be used in the EXPLODE instruction whenever possible, there are circumstances that require the use of the tree number instead, e.g., when a term is in more than one tree, with different terms in each tree. When this occurs, the term will have more than one tree number. If the user wishes to search the term EXPLODED only in a specific tree, the user should EXPLODE using the desired tree number. This list of changes may be used to validate tree numbers used in previous searches, especially stored or saved searches.

AUTOMATIC SDIS ON SDILINE/HEALTH

(Please see also the following Technical Note for information on CANCERLIT SDIs.)

All STORESEARCHES stored for use with the SDILINE and HEALTH files in the Automatic SDI

Program should be reviewed. Those searches requiring revision due to 1988 vocabulary changes must be deleted and re-stored by Thursday, December 3, 1987 in order to receive correct retrieval. The January (8801 (EM)) SDILINE SDIs will be processed beginning on or about December 4, 1987. To facilitate review of stored searches, searchers are able to execute their STORESEARCHes online between November 16, 1987 and December 4, 1987. During this time, the December 1987 SDILINE will contain 1988 MeSH terms so searchers can run their STORESEARCHes against this revised SDILINE to check correct operation of stored strategies against the new vocabulary. Only SDILINE will have 1988 vocabulary terms on citations during this time period.

In order to check correct operation of stored searches during this designated period, searchers should first record the number of citations received for each stored search executed by NLM through the Automatic SDI Program against the December 1987 SDILINE (available October 31) with the 1987 vocabulary. (The number of citations retrieved is listed on the front of each SDI printout received. The name of the stored search is the title of the printout.) Beginning November 16, 1987, searchers should execute online each SDILINE stored search against the December SDILINE, which will contain the same number of citations but will then reflect 1988 MeSH vocabulary. (Stored searches may be executed in the same manner as saved searches during this period, i.e., by inputting the stored search name online qualified by (SN). Be sure you are connected to SDILINE.) If the number of citations (i.e., postings) retrieved is not equal to the number received in the December 1987 SDILINE printouts with 1987 vocabulary, searchers may assume the stored search has been affected by a 1988 vocabulary change. Searchers should then display the strategy (use the command DISPLAY with the stored search name) and check the terms against the lists in front of the 1988 MeSH. Tree numbers should be checked in the 1988 MeSH Tree Structures; CAS Registry Numbers should be checked in the online MESH VOCABULARY FILE®. Remember to check the list of headings new for 1988; some of these new MeSH headings may be pertinent to the search strategies reviewed.

In summary, the 1987 Year-End Processing schedule is as follows:

October 31, 1987:

December 1987 MEDLINE/SDILINE (8712 (EM)) with 1987 MeSH vocabulary available online.

November 14-15, 1987:

SDILINE unavailable in order to implement this database with 1988 vocabulary.

November 16, 1987:

December 1987 SDILINE with 1988 MeSH terms available online with STORESEARCHes executable online. December SDILINE available through December 11, 1987, but all stored searches used for Automatic SDIs against SDILINE must be corrected and restored by December 3.

December 4, 1987:

SDILINE Automatic SDIs will be processed by NLM against January 1988 (8801 (EM)) data beginning on or about this date. All corrections to strategies must be restored by December 3.

December 10, 1987:

HEALTH and CANCERLIT Automatic SDIs must be corrected and restored by this date.

December 12-13, 1987:

The NLM computer will be unavailable for searching so that the 1988 MEDLINE/SDILINE/HEALTH/CANCERLIT databases and MEDLINE Backfiles may be installed. (The TOXNET computer is unaffected.)

Note: If the installation of the 1988 databases proceeds smoothly, it is possible that the computer will come back up early, that is, on either December 12 or 13, with the 1988 databases ready for searching. These dates are given as guidelines so searching schedules can be planned.

December 14, 1987:

8801 (EM) MEDLINE/SDILINE/HEALTH database updates available online with January 1988 data. The CANCERLIT database updated through 8712 (EM) should also be available online this date. These databases and the MEDLINE Backfiles should then be searched using the 1988 MeSH vocabulary.

December 14, 1987:

HEALTH Automatic SDIs will be processed by NLM against January 1988 (8801 (EM)) data beginning on this

date. Please see following note for information about the processing of CANCERLIT SDIs.

CANCERLIT YEAR-END PROCESSING & AUTOMATIC SDIs

The National Cancer Institute (NCI) and NLM are working together to complete Year-End Processing for CANCERLIT by the same date as MEDLINE/MEDLINE Backfiles/SDILINE and HEALTH. If all goes well, CANCERLIT with 1988 MeSH vocabulary should be available online on Monday, December 14, 1987.

The normal 8712 (EM) update for CANCERLIT will be included in this 1988 version of CANCERLIT that should appear online December 14, 1987. The 8712 (EM) citations will use the 1988 MeSH vocabulary. Therefore, all CANCERLIT Automatic SDIs must be revised for the 1988 MeSH vocabulary and restored by December 10, 1987. The CANCERLIT 8712 (EM) Automatic SDIs will probably be run after the 8801 (EM) Automatic SDIs for SDILINE and HEALTH, starting the week of December 14. (Note: the CANCERLIT EM tag is always one month behind the SDILINE and HEALTH EM tag.)

Additional Changes

The CANCERGRAM Identifier (CG) field will be updated during the Year-End Processing of CANCERLIT. Remember, this field is updated only on an annual basis.

YEAR-END PROCESSING OF TITLE ABBREVIATIONS

Over the years, discrepancies have occurred between journal title abbreviations as cited in MEDLINE and the corresponding indexing control records in SERLINE. NLM has identified these problem areas and will continue to make appropriate corrections to either the SERLINE® or MEDLINE records this fall as part of Year-End Processing. For the most part, it is the oldest MEDLINE data that are affected. Making the SERLINE and MEDLINE journal title abbreviations agree will help interlibrary loan procedures and further improve the quality of MEDLINE data.

1988 MESH VOCABULARY AND DATABASES

The MEDLINE, MEDLINE Backfiles, SDILINE, and HEALTH files will be available on December 14, 1987 with 1988 MeSH terms. If all goes according to schedule, CANCERLIT is also expected to be available on this date with 1988 MeSH terms. Other files using MeSH vocabulary (i.e., CATLINE®, AVLINE®, BIOETHICS, POPLINE, and TOXLINE) will be maintained for 1988 vocabulary at later dates. Please watch future issues of the *NLM Technical Bulletin* and the online NEWS for announcements. Searches stored for the Automatic SDI program for CATLINE, AVLINE, or POPLINE should not be revised for 1988 vocabulary at this time.

JANUARY 1988 SDILINE AUTOMATIC SDIs DELAYED DUE TO YEAR-END PROCESSING; FEBRUARY 1988 SDIs TO BE RUN EARLY

The 8801 (EM) SDILINE Automatic SDIs for January 1988 will be run beginning December 4 rather than late November. However, please note that the 1988 MEDLINE, MEDLINE Backfiles, and SDILINE will not be made available online until Monday, December 14, 1987.

The 8802 (EM) SDILINE Automatic SDIs for February 1988 will be run one week early -- over the weekend of December 18, 1987 -- and will be mailed during the following week. Therefore, you will receive two Automatic SDILINE mailings (8801 and 8802) in December.

Billing for Automatic SDIs on SDILINE, November/December 1987.

Because of the two updates of SDILINE in the month of December 1987 (8801 (EM) and 8802 (EM)), participants in the Automatic SDI program should expect charges for two sets of SDILINE Automatic SDIs on their December invoices. No SDILINE Automatic SDIs will be run in November 1987. Participants in the Automatic SDI program should expect no charges for SDILINE Automatic SDIs on their November invoices.

AVAILABLE PRE-EXPLOSIONS

Appendix A is a list of available Pre-explosions for 1988. The list is printed on one side so it can be removed from the issue and posted near the searcher's terminal. No new Pre-explosions were added for 1988.

The Pre-explosions are listed on

pages I-121 and I-122 of the *Medical Subject Headings--Annotated Alphabetic List, 1988*. Pre-exploded terms are indicated by a black dot (●) next to the heading in the body of the 1988 alphabetic *MeSH* and the *Tree Structures*. When the form of the Pre-explosion name varies from the corresponding MeSH term, the actual Pre-explosion name form is provided in the annotation for the heading in the *Annotated Alphabetic MeSH*.

Please access **FILE INFORM** and type **NEWS** to see the most recent news items online!

TOXLINE - Free for a Day!

TOXLINE, the royalty-free bibliographic file covering the adverse effects of chemicals and physical agents on living systems, has been available at the same low cost as MEDLINE since its regeneration this summer. At that time, the toxicology literature files at NLM were reconfigured in a new way in order to separate the non-royalty sources from those requiring royalty charges that NLM must pass on to users. Now, users of the toxicology files have a choice: they may perform a search in TOXLINE at a modest price, and then decide if they want to go on to search in the more expensive files from royalty sources. These files, TOXLIT and TOXLIT65, can be searched more efficiently, and thus more economically, if the search strategy has been worked out and even formulated as a SAVESEARCH while the user is in the TOXLINE file.

In order to acquaint users with the new TOXLINE, NLM is offering a special day for free searching of that file. This will be Thursday November 19, 1987. We hope that this opportunity for free exploration in TOXLINE will allow users to see for themselves the scope of coverage of the new file, and to experiment with the use of MeSH searching now available there in conjunction with Text Word searching.

Questions such as the following can be very well answered using TOXLINE:

Is NIH funding any research projects on Navajos living near uranium mine tailings?

What is "loco weed" and what does it do?

What has been published on the health effects of fallout from the Chernobyl accident?

Many searchers would think of MEDLINE first, but for adverse effects information, TOXLINE (and TOXLIT) may be more on target. Much of TOXLINE (76%) is drawn from MEDLINE, yet eleven other sources of information are also used to build TOXLINE. One of these is the toxicology-related portion of the CRISP database, which describes research projects funded by the National Institutes of Health (NIH). Another source of data for TOXLINE is the CIS file of the International Labour Office in Geneva, rich in occupational safety and health information.

WHAT'S THE CATCH?

First, TOXLINE is free for only one day, November 19. Second, offline prints are not free; they are \$.25 per page, the usual price. Third, TOXLIT and TOXLIT65, the files which contain data from Chemical Abstracts Service (CA), BioSciences Information Service (BIOSIS), and International Pharmaceutical Abstracts (IPA) are available at the usual cost of approximately \$121 per connect hour prime time, and \$114 per connect hour non-prime time.

HOW DO I GET MORE INFORMATION?

The monthly search hint in the August *NLM Technical Bulletin*, "Searching Techniques for the New TOXLINE and TOXLIT Files," contains the most up-to-date information about the toxicology bibliographic files. Consult it for guidance.

Remember, TOXLINE is the same price as MEDLINE now, except for the free day, November 19! Take advantage of this opportunity to examine the new TOXLINE file.

COMING ATTRACTIONS FOR THE 1988 SYSTEM - DECEMBER 14, 1987

These are brief announcements of changes and features expected for MEDLARS on December 14, 1987. More details will appear in forthcoming issues of the *NLM Technical Bulletin*.

MEDLINE BACKFILE RECONFIGURATION - 1988

The three oldest MEDLINE Backfiles, (MED66, MED71, MED75) will be merged into two new backfiles, MED66 and MED72. These files were pulled by year of publication. MED66 will cover 1966 to 1971 while MED72 will cover 1972 to 1976. However, the NLM Gaps Project is still active so older citations will also be found in the current MEDLINE file. Effective December 14, 1987 MEDLINE and its Backfiles with their primary dates of coverage will be as follows:

<u>Primary File</u>	<u>Aliases</u>	<u>Coverage</u>
MEDLINE	MED	1986-
MED83	M83, BACK83, B83	1983-1985
MED80	M80, BACK80, B80	1980-1982
MED77	M77, BACK77, B77	1977-1979
MED72	M72, BACK72, B72	1972-1976
MED66	M66, BACK66, B66	1966-1971

The old file names, MED71 and MED75, will be kept as aliases so that GRATEFUL MED™ Version 2.0 will still function. Version 3.0 (which will incorporate these name changes) is expected to be released in December 1987.

Next year NLM is planning to rearrange the citations in MED77 through MEDLINE. For the 1989 system, NLM expects to have MEDLINE and its backfiles configured by year of publication with citations in their appropriate date of publication range regardless of when the article was actually indexed.

MEDLINE DATA TO INCLUDE ADDRESS FIELD

Beginning with the 8801 Entry Month (EM), the Address (AD) field formerly available for only SDILINE searching, will be retained in MEDLINE and print in the PRT DL command. The AD field contains the institutional affiliation of the principal author of the article (see Manual, 7.3.3). This will not impact upon any of the print formats available in the Automatic SDI Program. When the Health Planning and Administration database is updated, the MEDLINE derived citations (8801 EM forward) will carry the Address (AD) field as well. The AD field in MEDLINE and HEALTH will not be directly searchable, but can be accessed via STRINGSEARCH as in SDILINE.

NEW NURSING JOURNAL SUBSET TAG IN MEDLINE

A new valid value for the MEDLINE Journal Subset (SB) field has been created to tag all citations from nursing journals regardless of the journal status (IM or Special List). The new value is N in the SB field. This change is retrospective. To limit searches to nursing journals in MEDLINE and the Backfiles, effective with the 1988 system, use the tag N (SB). SERLINE also carries this new N (SB) tag.

1988 CHANGES TO ANNOTATIONS FOR CATALOGERS

With the 1988 system update to CATLINE, the Cataloging Section has decided to follow the indexing rule regarding use of the specialty and disease headings with form qualifiers. In the past, whenever a cataloger cataloged one of the printed forms of materials listed in the Appendix of MeSH, the instructions indicated that the specialty heading should be used instead of a disease or organ heading. For example, a cataloger would subject analyze an atlas of eye diseases as OPTHALMOLOGY/atlases following the instructions at EYE DISEASES which read: CATALOG:form qualif = OPTHALMOLOGY/form whereas an indexer would use the subject heading EYE DISEASES. Effective with 1988 cataloging, catalogers are permitted to use form subheadings with headings other than specialty terms. For example, EYE DISEASES/atlases is permitted. All annotations referring to the use of form qualifiers thus have been

changed. CATLINE records entered before December 1987, will not be maintained, so searchers should continue to OR terms under the specialty heading with the disease or organ heading. NOTE: AVLINE records always were cataloged using the indexing annotations for specialty and diseases and did not follow the cataloging "-ology" rule.

CHANGES IN 1988 INDEXING POLICY & VOCABULARY

Once each year, NLM adds a number of MeSH headings to its list of more than 15,000 controlled vocabulary terms so that our indexing will better reflect the current biomedical literature. In addition to the new MeSH headings for 1988, a number of major changes have been made in indexing policy. These changes will be described in detail in the special update supplement of a forthcoming *NLM Technical Bulletin*, probably the January issue. A preview is provided below primarily to assist users who will be revising their STORESEARCH strategies in SDILINE between Nov. 16 and Dec. 3. These changes are not effective in the regular system until mid-December of this year.

NEW SUBHEADING - PHARMACOKINETICS - PK

A new subheading, /pharmacokinetics, is being added with 1988 indexing to correspond with the new major descriptor PHARMACOKINETICS. The subheading /pharmacokinetics is abbreviated PK and is for use with the D category (Chemicals and Drugs) MeSH headings only. The scope note found in the *Annotated Alphabetic List, 1988*, describes it as follows: Used for the mechanism, dynamics and kinetics of exogenous chemical and drug absorption, biotransformation, distribution, release, transport, uptake, and elimination as a function of dosage, extent and rate of metabolic processes.

For further information please refer to the *Annotated Alphabetic List, 1988*, and future articles in this publication.

SUBHEADING NAME CHANGE

The subheading /pharmacodynamics will be renamed to /pharmacology in an effort to remove any confusion as

to its usage. /pharmacology will retain the searching abbreviation, PD, and should continue to be used to retrieve citations to articles discussing the effects of drugs and chemicals. The scope note describes the subheading as follows: Used with drugs and exogenously administered chemical substances for their actions on tissues and organisms; includes effects upon metabolism, acceleration or inhibition of biological processes, and the mechanisms of action.

NEW NLM POLICY FOR REVIEW ARTICLES

As announced at the Medical Library Association Annual Meeting in May, 1987, the concept of REVIEW articles has been reexamined in an effort to index articles more specifically, and provide searchers with a variety of ways to find review information. Beginning with 1988 indexing, the following additions have been made to the MeSH hierarchy:

REVIEW LITERATURE
 CONSENSUS DEVELOPMENT CONFERENCES
 REVIEW, ACADEMIC
 REVIEW, MULTICASE
 REVIEW OF REPORTED CASES
 REVIEW, TUTORIAL

The following "see references" may also be used in searching:

REVIEW, EPIDEMIOLOGIC see REVIEW, MULTICASE
 REVIEW, SUBJECT see REVIEW, TUTORIAL
 STATE OF THE ART REVIEW see REVIEW LITERATURE

Articles indexed with any of the REVIEW LITERATURE MeSH headings will also be indexed with the citation type, REVIEW. Using the strategy 'AND REVIEW' will continue to retrieve all review articles. But now if you want only a particular type of review article it will be possible to limit using the specific heading.

In addition the RF (Number of References) field will be added to all standard PRT commands for MEDLINE and HEALTH so that these review articles can be easily identified.

For further information, see the 1988 MeSH tools and future articles in this publication.

CHANGE FOR INDEXING OF PUERPERIUM AND ITS INDENTIONS

Starting with 1988 indexing, an article indexed with PUERPERIUM; LACTATION; LACTATION DISORDERS; MILK EJECTION and LACTATION, PROLONGED will not automatically receive the PREGNANCY check tag. These headings do not necessarily mean that a pregnant woman is involved.

SMOKING - MORE SUBHEADINGS ALLOWED

Twenty subheadings have been "extended" and may now be used with the MeSH heading SMOKING. These are: /adverse effects, /blood, /cerebrospinal fluid, /drug therapy, /economics, /ethnology, /genetics, /history, /immunology, /legislation & jurisprudence, /metabolism, /mortality, /occurrence, /pathology, /physiopathology, /prevention & control, /psychology, /therapy, /trends, and /urine.

NUCLEIC ACIDS - TWO MORE SUBHEADINGS ALLOWED

Beginning with 1988 indexing, the subheadings /drug effects and /ultrastructure have also been "extended" and will be permitted with the MeSH heading NUCLEIC ACIDS and all its indentions.

NEW RUBRIC - [CLASSICAL ARTICLE]

In addition to the rubrics [letter], [editorial], [news], [clinical conference], and [interview], a new rubric will be added with 1988 indexing, [classical article]. NLM rubrics are explanatory words added to the title of an item that describe the form of an article. The new NLM rubric will replace the publishers' rubrics at the start of the title that identified these reprinted articles of a classical nature. The name of the author of the classic will appear in the Personal Name as Subject (PS) field and biographical check tags will be added as appropriate.

NEW MeSH HEADINGS

Approximately 238 new MeSH headings were added for 1988. To name just a few...BALLOON DILATATION; BILIARY TRACT SURGERY; BISEXUALITY; CAUSE OF DEATH; CHILD CUSTODY; DIAGNOSTIC IMAGING; DRUG CARRIERS; DRUG RESIDUES; DRUGS, CHINESE HERBAL; HAND DEFORMITIES; FOOT DEFORMITIES; INTERLEUKINS; MATERIA MEDICA; LOVASTATIN; MOLECULAR SEQUENCE DATA; PRONATION; SUPINATION; PRODRUGS; PRODUCT LINE MANAGEMENT (see Monthly Search Hint in this issue); RNA, TRANSFER, AMINO ACID-SPECIFIC (each specific transfer RNA also added); SAN FRANCISCO; TUMOR NECROSIS FACTOR; WOMEN'S HEALTH SERVICES.

For the complete list of new MeSH headings with Scope Notes for 1988, please see the *Annotated Alphanumeric List, 1988*.

ADDITION OF NUMBER OF REFERENCES (RF) FIELD TO PRINT FORMATS

The Number of References (RF) field will be added to all MEDLINE and HEALTH standard print formats. Number of References are only included, however, with citations to articles indexed with the check tag REVIEW.

HIV SEROPOSITIVITY

Because of the importance of research on AIDS and the HIV virus causing AIDS, indexers requested immediate use of a new term, HIV SEROPOSITIVITY, proposed for 1989. MeSH staff agreed and the indexers shall begin indexing for 1988 pertinent articles on HIV SEROPOSITIVITY.

In addition to the 1988 main heading HIV SEROPOSITIVITY, there are several SEE references also available:

- AIDS SEROPOSITIVITY
- ANTI-HIV POSITIVE
- HIV ANTIBODY POSITIVE
- HIV SERONEGATIVITY
- HTLV-III SEROPOSITIVITY

The Tree Numbers are C1.539.780.20.452, C2.782.815.483.23.452, and C20.673.483.23.452 - all indented under ACQUIRED IMMUNODEFICIENCY SYNDROME.

Both indexers and searchers will be able to use the short form HIV SEROPOS. Before 1988 the concept was indexed basically under AIDS or HIV with ANTIBODIES, VIRAL added when discussed.

[Editor's Note: Each month the NLM Technical Bulletin features a column of questions/answers concerning GRATEFUL MED. Contributions for this column will be appreciated.]

Sometimes I want to restrict my searches to a certain age group. Is there an easy way to do this?

Yes. The MeSH vocabulary includes some terms called CHECK TAGS which our indexers are obligated to use to indicate, among other things, the human age group(s) mentioned in the article. The MeSH CHECK TAGS for human age groups are:

INFANT, NEWBORN (birth to 1 month)
 INFANT (1 to 23 months)
 CHILD, PRESCHOOL (2 to 5 years)
 CHILD (6 to 12 years)
 ADOLESCENCE (13 to 18 years)
 ADULT (19 to 44 years)
 MIDDLE AGE (45 to 64 years)
 AGED (65+)*

*An article discussing individuals over 80 will also be indexed with AGED, 80 AND OVER.

You can select one or more of these terms from the display (via the F10 key) whenever it is necessary to restrict your search to a specific age group.

Is it necessary to purchase the MeSH publications that come out each year?

The 1988 MeSH tools (*Annotated Alphabetic List*, and the *Tree Structures*) are now available for purchase from NTIS (see last month's issue for ordering information or call MMS). NLM recommends buying these annual

editions so that you will have as much information as possible about MeSH vocabulary when planning your searches.

If you search to get a few articles to familiarize yourself with the current literature and are happy selecting terms from the F10 display then you may not need these tools.

On the other hand, if you are the type who likes to know the specifics about something, you would probably like to read the annotations provided in the *Annotated Alphabetic List*. The annotations are often helpful to searchers, although they are usually directed at indexers. (Indexers assign the MeSH headings to each citation.) For example the annotation with the term, NERVOUS SYSTEM NEOPLASMS, reads, *...do not confuse with NEOPLASMS, NERVOUS TISSUE (neopl composed of nerve tissue)*. Annotations will also include the history of a term; the first year the MeSH term was used for indexing and clues for retrieving citations indexed before that year. For example, the year the term LYME DISEASE became a MeSH heading is noted as 1985 and the annotation reads, *...search ARTHRITIS, INFECTIOUS 1979-84; - an important consideration if you plan to do a backfile search.*

The *MeSH Tree Structures* is a useful tool for those who like to get a feel for where a term fits in the entire hierarchy of terms. The *Tree Structures* will also tell you what terms are indented under a broader term in order to see how the EXPLODE capability will increase retrieval.

There are many more reasons why these tools can be helpful. If you can borrow a set to examine (medical libraries usually have a set), you may get a better feel for the usefulness of the MeSH tools.

GRATEFUL MED users should also note the following articles and/or features in this issue:

TECHNICAL NOTES, p.3.
 COMING ATTRACTIONS FOR THE 1988 SYSTEM - DECEMBER 14, 1987, p.9.

DIRLINE® Update and Changes

The DIRLINE file has been updated and has a total of 15,629 records. New data have been added from the National Referral Center of the Library of Congress, the OHIC (Office of Disease Prevention and Health Promotion Health Information Center), and the American Association of Poison Control Centers. The data from DRACON (Drug Abuse Communications Network) have been retained but not updated. Users are reminded to search for specific organizations by using the NW qualifier (Name Words) and for subjects using the TW qualifier (Text Words).

During the September update to DIRLINE, the following changes were made:

1. The records from the National Referral Center (NRC) now utilize a new data element called the States (STS) field. This field is for the postal abbreviations of State names. Until the file can be made uniform, searchers should use the following strategy to search for a State's name:

(STS) CA or CALIFORNIA (CY)

NOTE: Because the postal code for Oregon, OR, is also a Boolean operator, it cannot be searched directly. Instead this procedure is recommended:

SS 1/C?

USER:

O# (STS) OR OREGON (CY)

PROG:

MM (O#) (3)

1 OH (STS)

2 OK (STS)

3 OR (STS)

SPECIFY NUMBERS, ALL, OR, NONE-

USER:

3

...

2. The Address (AD) field in the Office of Disease Prevention and Health Promotion Health Information Center (OHIC) file is now formatted like a mailing label, instead of "wrapping" into one long field. This will aid the subfile producer in record maintenance.

3. The Secondary Source Identification (SI) field in the NRC records has been changed to match the format of the other subfiles' records.

The old format was:

NRC/69/000812

The new format is:

NRC/00812

Searchers should use the new format, since the old one has been deleted.

4. Date searching has also changed. The Last Revision (LR) field format can vary from four to six characters in the format YYMMDD.

To search on LRs it is best to truncate after the first four digits.

8701: (DA)

Likewise, the Entry Month (EM) field can vary from 4 to 6 characters. To search on EMs, truncate after the first four digits.

8701: (EM)

5. Telephone numbers are found either in the Telephone Number (TEL) field or in the Institutional Contact (IC) field. Neither field is searchable, but both print with the standard, full, and detailed print commands.

Monthly Search Hint:

Online Searching of New Concepts - Product Line Management

Patricia Pinkowski
Anne Fox Kiger
American Hospital Association Resource Center

As the health care delivery system changes, the terminology that describes it also changes. Often the changes are so rapid that lag time occurs between the use of new concepts and their consistent appearance in controlled vocabulary systems. One concept that has entered the health care delivery literature suddenly is product line management. Product line management is a term derived from manufacturing firm management. While fairly new in health care, the term initially appeared about 15 years ago and is generally credited to General Electric. Product line management is a management system that builds a market position through particular product lines or services. Each product line is a strategic business unit that services distinct segments of the population with clearly articulated, individualized management strategies.

The hospital can be viewed as a service enterprise whose primary function is the provision of diagnostic and therapeutic medical services. Hospital products are the specific sets of services provided to individual patients. Within the hospital, product line management may be defined as the organizational structure, management control system, and delivery strategies for health care services structured around case types or major clinical services.

Online searching is the most effective way to locate citations to new topics containing a catchword or phrase. Even when specific controlled vocabulary terminology does not exist, a subject search can be performed

using terms for the broader topic as an initial step. This often helps to reduce the number of false drops. The appropriate Text Words can then be combined with the controlled vocabulary retrieval. STRINGSEARCHing the resulting set is helpful for correct word order and adjacency.

Since this is a management topic, the most appropriate database is Health Planning and Administration (File HEALTH). Figure 1 shows the Text Words being entered. Ninety-one citations were retrieved. Since product and line usually appear adjacent to each other, a STRINGSEARCH of titles and abstracts can be used further to refine the retrieval to sixty-three articles. The truncation symbol (#) between the words helps retrieve hyphenated forms of the phrase. An examination of the SI field in the retrieved articles shows that fifteen of them originated in MEDLINE. Figure 1 shows only the titles. The remaining 48 are unique to HEALTH. An initial subject search using controlled vocabulary was not needed because this particular combination of terms is fairly specific in HEALTH.

This strategy retrieves an acceptable set of appropriate citations. The following strategy provides a more exhaustive search. The subject heading used most frequently by indexers on the "product line" articles is *MARKETING OF HEALTH SERVICES*. In Figure 2 this subject heading is combined with the Text Word "product." The citations already found are removed. The titles of the remaining articles show some possible hits. Since 90 percent of the citations in HEALTH are in English, it is usually not necessary to limit retrieval to English only.

For comparison of the files Figure 3 shows a product line search executed in MEDLINE. The Text Word search retrieves too many articles to attempt a STRINGSEARCH so the subject heading *MARKETING OF HEALTH SERVICES* is included. This retrieves a few appropriate articles. The other articles retrieved by "product" and "line" deal with cell lines and genetic research.

The term *PRODUCT LINE MANAGEMENT* will be a new Medical Subject Heading in 1988.

**1988
HOLIDAY SCHEDULE**

Listed below is the holiday schedule for calendar year 1988. As was the case last year, the NLM computer is scheduled to be UP on every holiday listed below. However, on some holidays, computer hours are non-guaranteed. A computer status of non-guaranteed means that if the computer goes down, it is unlikely to be restarted until after midnight of the holiday. Specific details on guaranteed versus non-guaranteed hours of operation for each holiday will be published prior to that holiday in the NLM Technical Bulletin. Non-prime rates will be in effect on non-guaranteed holidays and on guaranteed holidays when the MEDLARS Management Service Desk is not staffed.

<u>HOLIDAY</u>	<u>DATE</u>	<u>SYSTEM STATUS</u>
Christmas Day (1987)	Fri, Dec 25	Non-guaranteed*
New Year's Day	Fri, Jan 1	Non-guaranteed*
Martin Luther King's Birthday	Fri, Jan 15	Guaranteed
Martin Luther King's Birthday (observed)	Mon, Jan 18	Guaranteed*
Washington's Birthday (observed)	Mon, Feb 15	Guaranteed*
Washington's Birthday	Mon, Feb 22	Guaranteed
Memorial Day	Mon, May 30	Non-guaranteed*
Independence Day	Mon, Jul 4	Non-guaranteed*
Labor Day	Mon, Sep 5	Non-guaranteed*
Columbus Day (observed)	Mon, Oct 10	Guaranteed*
Columbus Day	Wed, Oct 12	Guaranteed*
Veterans Day	Fri, Nov 11	Guaranteed*
Thanksgiving Day	Thu, Nov 24	Non-guaranteed*
Christmas Day (1988)	Mon, Dec 26	Non-guaranteed*

*Non-prime rates are in effect all day.

The TOXNET computer is up 24 hours a day, 7 days a week, and the system status is always guaranteed. Non-prime rates will be in effect on all holidays.

DOCLINE will be available (non-guaranteed) on all federal holidays except Christmas Day, New Year's Day, Thanksgiving Day, Memorial Day, Independence Day, and Labor Day.

Notice of changes to this schedule and/or temporary changes in hours of operation will also appear in the online NEWS.

ANNOUNCING: GRATEFUL MED® VERSION 3.0

NLM expects to release GRATEFUL MED, Version 3.0, in late December 1987 or early January 1988. This new version of the program will be mailed, free of charge, to all users who purchased Version 1.0 or 2.0 of the program. The program will be mailed to the address to which the original software program was mailed. For any change of address, please notify the National Technical Information Service (NTIS) immediately. The NTIS Customer Assistance phone number is (703)487-4650. Users may also want to alert their own Purchasing Department as to the expected arrival. Sometimes a central purchasing office no longer has the original order and cannot forward the new version to the right employees.

NLM will use the online news and broadcasts to announce when distribution of the software actually begins.

The mailing for Version 3.0 will consist of 2 new diskettes (a Master Program Disk and a new Master MeSH® disk) and complete replacement pages for the current *User's Guide*.

Technical Notes

Whenever applicable, the heading of each Technical Note includes a reference to the section of the Online Services Reference Manual 1986 that is considered most relevant to the item being discussed, e.g., (Manual 4.7.2). Users should keep in mind that the item may pertain to other sections as well.

NLM COMPUTER UNAVAILABLE SATURDAY & SUNDAY DECEMBER 12-13 1987

Reminder: The NLM computer is scheduled to be unavailable for searching on Saturday, December 12, 1987 and Sunday, December 13, 1987. This is so the MEDLINE®/SDILINE®/BACKFILES, HEALTH, CANCERLIT®, CATLINE®, and AVLINE® databases with the 1988 MeSH Vocabulary may be installed on the MEDLARS® system. The TOXNET® computer is unaffected. If the installation of the 1988 databases proceeds smoothly, it is possible that the computer will be operational early, that is on either December 12 or 13, with the 1988 databases ready for searching. These dates are provided only as guidelines so that searching schedules may be more easily planned. Please see the Technical Notes in the October 1987 *NLM Technical Bulletin* for additional information about changes to certain 1988 databases.

CHRISTMAS AND NEW YEAR'S HOLIDAYS

The NLM computer is scheduled to be available for searching on Christmas (Friday, December 25) and New Year's Day (Friday, January 1, 1988). The computer status on these holidays will be non-guaranteed. This means that if the computer goes down it is unlikely to be restarted until after midnight of the holiday. Searchers should please note that non-guaranteed hours of operation are expected to begin early on Christmas Eve and New Year's Eve at 5:00 pm ET. Specific details on guaranteed versus non-guaranteed hours of operation for the NLM computer for each holiday will appear as online NEWS items the week before the holiday. Non-prime rates will be in effect all day on these holidays and the MEDLARS Management Service Desk will not be staffed. Please note that DOCLINE® will not be available on Friday, December 25 and Friday, January 1,

1988. The TOXNET computer will be up on both holidays on a guaranteed basis.

STORESEARCH EXECUTABLE ONLINE

STORESEARCH strategies may now be entered and run online at any time, against any database. It is no longer necessary, as in the past, to only use them through OFFSEARCH. This also includes Automatic SDI current awareness stored searches. Therefore, searchers do not have to wait for a three-week window in December each year to run their "Auto SDI" stored searches and evaluate the effect of changes they may wish to make using new Medical Subject Headings (MeSH) search terms.

Using STORESEARCH is much like SAVESEARCH. Complete details are included in Appendix A, step-by-step, for those who are unfamiliar the feature. We suggest allotting some time to read and study this information. It may be kept with the *Online Services Reference Manual*, 1986. The primary use of STORESEARCH is to eliminate re-keying when running identical searches against several similar databases. The search is keyed once and then can be run against many databases, or can be run repeatedly against the same database at regular update intervals such as in the Automatic SDI Program. However, some "rules" must be observed for the procedure to work properly. The procedure STORESEARCH can save money and time but its peculiarities must be learned.

MEDLINE DATES OF COVERAGE TO CHANGE & MEDLINE BACKFILE RECONFIGURATION

Reminder: Effective December 14, 1987, the date the MEDLINE database and its Backfiles are made available using the 1988 MeSH vocabulary, the dates of coverage for MEDLINE and MED83 will change also. MEDLINE will cover journals published primarily during 1986 to the present. Its first Backfile, MED83, will cover primarily 1983 through 1985. Also, the three oldest MEDLINE Backfiles, (MED66, MED71, MED75) will be merged into two new backfiles: MED66 and MED72. Please see last month's *NLM Technical Bulletin*, page 9, for complete dates of coverage for all of MEDLINE's Backfiles.

BILLING FOR AUTOMATIC SDIS ON SDILINE, NOVEMBER/DECEMBER 1987

Reminder: Due to the two updates of SDILINE which occur in the month of December 1987 (8801 (EM) and 8802 (EM)), participants in the Automatic SDI program will see charges for two sets of SDILINE Automatic SDIs on their December invoices. However, no SDILINE Automatic SDIs will be run during the calendar month of November 1987 so there should be no charges for SDILINE Automatic SDIs on November invoices. Instead, two sets of charges will appear on the December invoices. Please see the Technical Note in the October 1987 *NLM Technical Bulletin*, p. 6, titled "JANUARY 1988 SDILINE AUTOMATIC SDIS DELAYED DUE TO YEAR-END PROCESSING," for additional information.

CATLINE/AVLINE AVAILABLE DECEMBER 14, 1987 WITH 1988 MESH

The CATLINE and AVLINE files will be available online with 1988 MeSH terms on December 14, 1987. At that time all searches using MeSH must conform to the *Medical Subject Headings*, 1988. All STORESEARCHes stored for use with CATLINE/AVLINE files in the Automatic SDI Program should be reviewed and restored, if necessary, by December 31.

RTECS® MOVE TO TOXNET EXPECTED IN DECEMBER

Due to processing delays, RTECS has not yet been available in TOXNET. It is expected to move to TOXNET in December. RTECS will concurrently remain available in ELHILL® for approximately three months.

BACKFILE POSTINGS IN THE MESH VOCABULARY FILE

After December 14, the date when the 1988 MEDLINE databases become available, the Backfile Postings fields of the MESH VOCABULARY FILE will be changed to reflect information from the latest regeneration of the

MEDLINE Backfiles. The six data elements updated in MESH will be:

- M83 (for MED83 Backfile)
- M80 (for MED80 Backfile)
- M77 (for MED77 Backfile)
- M72 (for MED72 Backfile)
- M66 (for MED66 Backfile)

The numeric values in each of these fields will reflect the number of references for the term in each of the Backfiles. Each Backfile Postings field has two entries: the total postings for the term in a particular Backfile, and the *Index Medicus*™ (IM) or "central concept" postings (indicated by an asterisk (*)).

For example, a descriptor term in the MESH VOCABULARY FILE may have entries similar to the following:

- M83 - 95
- M83 - *77
- M80 - 122
- M80 - *100
- M77 - 179
- M77 - *120
- M72 - 166
- M72 - *131
- M66 - 183
- M66 - *101

The exact date for these changes will be included in the online NEWS.

PDQ® ENHANCEMENTS

A new data element has been added to PDQ's Protocol File. This field with the designated name NEW, will indicate studies that appear in PDQ the current month, but were not there the previous month. This could indicate a new study, or one that was temporarily closed, then reopened at a later date. Selecting option 3 on the Protocol Menu (Keyword search), followed by entering a search key of NEW=Y will retrieve all new or reopened studies. The retrieval can be combined with other search criteria to make it easy, for example, to list all new breast cancer studies.

Dates are also being added to the end of protocol titles indicating the most recent amendment or, for new protocols, the date they were originally summarized. As amendments occur and new studies are added to PDQ,

these dates will be entered so that, at some future date, all studies will have them.

1988 INDEX MEDICUS SUBSCRIPTION PRICE ANNOUNCED

The Superintendent of Documents (U.S. Government Printing Office, Washington, DC 20402) has announced the 1988 annual subscription rate for *Index Medicus*: \$179 (\$223.75 non-U.S.). The price includes twelve regular issues, plus *Medical Subject Headings* and the *List of Journals Indexed in Index Medicus*, which are included with the January issue. The price per single copy of a monthly issue of *Index Medicus* is \$34 (\$42.50 non-U.S.).

1988 MESH CHEMICAL TOOL

Medical Subject Headings--Supplementary Chemical Records, 1988 may now be ordered from NTIS although actual publication is scheduled for late January. The stock number is PB88-120599/GBB. The prices of the hardcopy version are \$43.00 in the United States and Canada and \$86.00 elsewhere. Microfiche prices are \$14.50 U.S./Canada and \$29.00 non-U.S. There is a \$3.00 (U.S./Canada) shipping and handling charge required for each order (\$4.00 non-U.S.). Please send remittance with orders to:

National Technical Information Service (NTIS)
5285 Port Royal Road
Springfield, VA 22161
(For telephone orders with deposit account or credit card, call (703) 487-4650.)

LIST OF JOURNALS INDEXED IN INDEX MEDICUS, 1988

The *List of Journals Indexed in Index Medicus*, 1988 is now available for purchase from the U.S. Government Printing Office. (Actual publication is scheduled for January.) The stock number is S/N 717-107-00003-9; the U.S. price is \$11.00 (\$13.75 non-U.S.). (NOTE: Subscribers to *Index Medicus* receive this publication automatically.) Orders should be sent to:

Superintendent of Documents
U.S. Government Printing Office
Washington, D.C. 20402
(202) 783-3238

BLACK AND WHITE MESH, 1988

The *Medical Subject Headings*, 1988 (Black and White MeSH) is now available for purchase from the U.S. Government Printing Office. The stock number is S/N 717-107-00002-1; the U.S. price is \$31.00 (\$38.75 non-U.S.). Subscribers to *Index Medicus* receive this publication as Part 2 of the January issue. This publication is for use with the printed *Index Medicus*. Online searchers should use the *Medical Subject Headings--Annotated Alphabetic List*, 1988 instead. Ordering information was provided in the Technical Notes section of the September 1987 issue of the *NLM Technical Bulletin*. If more information is needed, please call the MEDLARS Management Service Desk.

NLM ONLINE TRAINING PROGRAM 1988

Access FILE INFORM and type 'EXPLAIN TRAINING' to receive an online listing of the 1988 schedule of NLM Online Training classes. This schedule is also printed in the September issue of the *NLM Technical Bulletin* along with the revised form to apply for a class.

BIOETHICS PHONE NUMBER CHANGES

Effective November 1, the telephone numbers at the National Reference Center for Bioethics Literature, Kennedy Institute of Ethics, have changed. The new numbers are:

(202) 687-3885 (for reference questions)
(202) 687-6738 (for document delivery)

The toll-free number (800-MED-ETHX) for the National Reference Center for Bioethics Literature remains the same.

MESH POCKET CARD

Enclosed with this issue of the *NLM Technical Bulletin* is a copy of the new MeSH Pocket Card. This pocket card is intended to serve as a quick reference when

using the MeSH vocabulary on the MEDLARS system. Searchers should still refer to the *Online Services Reference Manual*, 1986 for complete information concerning the MESH VOCABULARY FILE.

Please access FILE INFORM and type NEWS to see the most recent news items online!

New Enhanced Search

Software Features

Announced

The National Library of Medicine is pleased to announce that several enhancements to the ELHILL software have been made available to the online user community. These new enhancements involve three general features:

PRINT

Users are able to PRINT selectively any combination of retrieved records without using the SKIP instruction. This capability is available for online and offline printing. Examples of PRINT commands now follow.

COMMAND	WHAT PRINTS
PRT 9-20	9th - 20th records
PRT 1,11,20-25	1st,11th,20th-25th records
PRT -5	5th record only
PRT 5	1st 5 records
PRT 1-5	1st 5 records

This simplified method of selectively displaying records should not be used in conjunction with the old SKIP instruction. The old SKIP instruction, e.g., PRT 17 SKIP 8, can still be used, but be sure NOT to combine SKIP with the new selective printing format.

NON-RESPONSIVE ANSWERS TO SYSTEM QUESTIONS

Users are able to enter search terms in response to program questions without using the command FIND. It is possible to directly enter search term(s) rather than answering the CONTINUE PRINTING or UP N OR DOWN N questions. The examples below illustrate this feature.

CONTINUE PRINTING? (YES/NO)

USER:
heart
SS (2) PSTG (1034)

...

UP N OR DOWN N ?

USER:
rosenberg sa
SS (3) PSTG (15)

NEIGHBOR

A numbered list of search terms is now generated in response to the NEIGHBOR command. One or more terms, or a range of terms, may then be SELECTed by number directly from the display, resulting in a search statement without having to rekey the search terms. The following examples illustrate the new NBR display and uses of the SELECT (abbreviated SEL) command.

USER:
nbr toxicology
PROG:

SELECT #	POSTINGS	TERM
1	20	TOXICOLOGISTS (TW)
2	1	TOXICOLOGO (TW)
3	345	TOXICOLOGY (MH)
4	556	TOXICOLOGY (TW)
5	343	TOXICOLOGY (TA)

UP N OR DOWN N?

USER:
sel 3

PROG:
SS (1) PSTG (345)

A hyphen entered between two SELECT numbers will cause the range of terms between the two numbers SELECTed to be ORd together. Likewise, a comma inserted between SELECTed numbers serves as an implied OR. Also, the SELECTed terms may linked together with Boolean (logical) operators (i.e., AND, AND NOT). For example:

SEL 1-3	ORs together terms 1, 2 and 3
SEL 1,3,5	ORs together terms 1, 3 and 5
SEL 1 AND SEL 5	ANDs together terms 1 and 5

The list of numbered search terms remains active and is useable throughout the search session. For example, at any subsequent search statement the searcher may enter SELECT 3,4 to search for the two terms selected.

The list may also be used with the SELECT command in other databases. Additional numbered terms are generated and added to the list when any subsequent NEIGHBOR command is issued. There may be a total of 140 terms kept in this SELECT LIST. New commands which are related to this enhancement are:

LISTSELECT - Used to display the list of previously generated terms.

KEEPSELECT - Used to keep certain terms in the SELECT list and erase others.

PURGESELECT - Used to erase the entire SELECT list.

We think that searchers will find these enhancements extremely useful. Please read the online EXPLAIN messages to learn more about these features. Enter FILE INTROMED and individually type EXPLAIN NEIGHBOR, EXPLAIN SELECT or EXPLAIN PRINT. Once in INTROMED, practice these new enhancements. The update issue of the *NLM Technical Bulletin*, scheduled for release in January, will contain more detailed information.

Notes on Subject Heading Policies for Catalogers

Wen-Min Kao
Technical Services Division, NLM

The NLM Cataloging Section has been reviewing policies on subject headings in order to make cataloging applications of MeSH more consistent with indexing principles. This will achieve greater specificity in the subject analysis of materials cataloged for CATLINE and AVLINE.

1. Form Subheadings Permitted with Organ and Disease Headings

Effective January 1, 1988, the Cataloging Section will begin applying form subheadings to organ and disease headings when appropriate. In the past, the NLM's policy was to use the specialty heading with the form subheading. For example, when cataloging an atlas of eye diseases, OPTHALMOLOGY/atlas was used rather than EYE DISEASES/atlas.

With the elimination of restrictions regarding the use of form subheadings, the appropriate annotations have been added to the affected main headings in the *Medical Subject Headings - Annotated Alphabetic List*, 1988. For example:

EYE
... CATALOG: form qualif permitted

EYE DISEASES
... CATALOG: form qualif permitted

The restriction on the use of form subheadings was never observed in cataloging audiovisuals because all records in AVLINE have form subheadings to describe the audiovisual media. Therefore, this policy change does not affect AVLINE records.

It will not be possible to machine-maintain all existing records in CATLINE to bring them into conformance with the new policy. For comprehensive subject searches in CATLINE where the presence of form subheadings might have required the use of the specialty

heading in older records, searchers should include both organ and organ/disease headings and the relevant specialty headings in the search.

2. Increase in the Number of Subheadings Applied to a Main Heading

In order to attain a finer degree of specificity in subject analysis, effective October 1987, the number of times the same main heading can be repeated with different subheadings has been increased from two to three. This applies to all four types of subheadings used in cataloging, namely, topical, geographic, form, and language. For example, it is now permissible to use in the same cataloging record:

EYE DISEASES - diagnosis
EYE DISEASES - therapy
EYE DISEASES - in infancy & childhood

The explanation under TOPICAL SUBHEADINGS - Number of Topical Subheadings Allowed, on p. I-87 of the *Annotated Alphabetic List*, 1988 should be changed to read:

NLM catalogers do not subdivide the same main heading with more than three topical subheadings. If more than three topical subheadings is required, the main heading is usually given with no topical subheadings.

3. Added Entries for the Same Name as a Subject and as an Author

With the 1987 regeneration of the CATLINE and AVLINE files, personal, conference, and corporate names used as subjects are now indexed separately from their counterpart names as authors (see the April 1987 *NLM Technical Bulletin*). It is now possible to search specifically for names as authors only (PN, CN, and CNA for personal, corporate, and conference names, respectively) or for names used as subjects only (PS, CS, and CNS). Therefore, the NLM Cataloging Section has instituted a new policy of tracing the same name heading as an author and as a subject if the situation justifies it. For example:

For an autobiography of Sigmund Freud, Freud would be the main entry as well as subject added entry.

For a book in Piagetian psychology prepared under editorial direction and issued as a Festschrift to Piaget, Piaget would be traced as an added entry as the honoree of the Festschrift, as well as a subject added entry.

VERSION 2.0

[Editor's Note: Each month the NLM Technical Bulletin features a column of questions/answers concerning GRATEFUL MED. Contributions for this column will be appreciated.]

What is the best strategy for retrieving articles discussing the therapy of a disease?

The best strategy would include the use of SUBHEADINGS (SH) along with the appropriate MeSH disease heading. There are over 70 topical subheadings (from ABNORMALITIES to VETERINARY) that are added to MeSH headings to describe the particular aspect of the MeSH heading discussed in the article. You will see MeSH heading/subheading combinations on the records you retrieve in your GRATEFUL MED searches. For example: Hypertension/DRUG THERAPY or Heart/TRANSPLANTATION. Topical subheadings are listed at the front of the *Annotated Alphabetic MeSH* and also on panel 13 of the MEDLINE pocket card.

Articles discussing the therapy of a disease are indexed using the subheading to describe the particular type(s) of treatment involved. The various subheadings used to describe treatment modalities are: DIET THERAPY (SH), DRUG THERAPY (SH), RADIOTHERAPY (SH), SURGERY (SH), and THERAPY (SH). THERAPY (SH) is used for other types of therapy or multiple therapies.

When you are searching for therapy topics it is highly recommended that you select an appropriate subheading from the F10 display. If you see the term displayed more than once, be sure to select the term followed by (SH) so that you will be searching the term as a subheading.

Subheadings should be grouped on the same SUBJECT line by themselves, not with the disease term. Groupings of two or three, like DIET THERAPY, SURGERY, and RADIOTHERAPY will work. However, BE PRUDENT. Try to select only those subheadings that are necessary; a search with too many

subheadings can cause an "overflow" (see next question) and your search may fail. In fact, the use of more than one subheading can cause an overflow, so it may be necessary to run multiple searches; one for each therapy of interest.

*What do terms like "PSTG" and "**NONE" mean? I see them as my searches are running.*

Here is a brief explanation of some of the system responses you may notice in your search interaction.

PSTG ()

POSTINGS. The number within the parentheses is the number of postings or records retrieved by the term(s) entered on each INPUT line. When the INPUT lines are combined the final postings are also displayed.

SS ()

SEARCH STATEMENT. The number within the parentheses is simply the number of the search statement that retrieved the postings. Each new search starts with SS (1). For example: SS (3) PSTG (87) would indicate that search statement number three retrieved eighty-seven postings.

NP ()

NO POSTINGS. The term within the parentheses did not match in the database. Check to see if you misspelled it. It is possible, however, to run successful searches even though you get NO POSTINGS for some terms because of the manner in which GRATEFUL MED searches.

If you see the screen that reads "...YOUR SEARCH FOUND NOTHING" it is likely you will see one of the following terms in the search interaction.

***NONE**

There was no match when all the search terms were combined. In other words, there are no records in that database that contain the combination of terms you specified. Check your spelling, try to broaden your strategy, or try to reduce the number of INPUT lines you are using.

STORPSTG OVFLW

The search retrieved too many postings. You need to reduce the number of terms in your search. Using MeSH terms from the F10 display rather than simply typing in terms on a SUBJECT line can help avoid this problem.

Don't forget to call the MEDLARS Management Service Desk (800-638-8480) to discuss your search

results or to get help with your searches.

GRATEFUL MED users should also note the following articles and/or features in this issue:

TECHNICAL NOTES, p3.

Computer Software Records in AVLINE

Carolyn N. Davis
Technical Services Division, NLM

INTRODUCTION

NLM has begun to catalog and add records for computer software used on microcomputers to the AVLINE database. The records for software are prepared following Revised Chapter 9 "Computer Files: Data and Programs" of the *Anglo-American Cataloging Rules*, 2nd ed., 1978. Software is not available from NLM on inter-library loan, although it may be used onsite in NLM's Learning Resources Center. In the AVLINE record, the Price (PR) field provides availability information for those procurement sources that loan or sell the software.

AVLINE RECORD CONTENT

At the present time, software records are entered into AVLINE in a modified format and some data are stored in more general fields because of current NLM system requirements. Until changes are made to NLM computer programs to accommodate a full record format for computer files, cataloging records for computer software will not be printed in NLM publications or distributed in MARC format. Computer software cataloging records may be easily identified by 1) the words 'Computer file' in the General Material Designation (GMD) field; 2) the form subheading 'software' which is appended to all print concept subject headings in the MH field; and 3) the presence of the media code 'CA' in the call number (CA) field in the AVLINE record (e.g., WA 485 CA no.1 1985).

In addition, the following specific types of information are included in computer software records in AVLINE:

1. FILE CHARACTERISTICS found in the EDITION (ED) field

Includes the type of file (e.g., program, data, or combinations); size of files, number of records, etc. - this is not the same as physical description, which is stored in Collation (CO).

2. TYPE OF MACHINE found in the GENERAL NOTE (GN) field

The computer that NLM has in the Learning Resources Center for use with the computer software program.

3. SYSTEM REQUIREMENTS found in the GENERAL NOTE (GN) field

The make(s) of computer(s) on which that software is designed to be used; type of operating system; software requirements; memory requirements; peripherals (e.g., printers, monitors) needed, etc.

4. DISK CHARACTERISTICS found in the GENERAL NOTE (GN) field

Type of disk on which the software is stored.

5. OTHER FORMATS AVAILABLE found in the GENERAL NOTE (GN) field

Whether the software is available for use with other makes of microcomputers.

SEARCHING FOR COMPUTER SOFTWARE IN AVLINE

Software records can be specifically searched by entering 'COMPUTER FILE' (ME) or by 'SOFTWARE' (SH). In addition, one can search by specific models of computers which can read the software by qualifying with (MD). A partial list of searchable values for models of computers is below; it will expand as additional models of computers are identified in the cataloging of software:

MEDIA DESCRIPTION (MD)

APPLE II (COMPUTER)
APPLE IIC (COMPUTER) (1984)
APPLE IIE (COMPUTER)
APPLE II PLUS (COMPUTER)
AT&T (COMPUTER)
COLUMBIA DATA (COMPUTER)

GRATEFUL MED Version 3.0
continued from page 1.

VERSION 3.0 ENHANCEMENTS

GRATEFUL MED, Version 3.0, incorporates many new features and enhancements. Some of these are described briefly below.

NEW DATABASES

Version 3.0 introduces several new databases (in addition to MEDLINE and CATLINE) in the user-friendly format:

AVLINE	TOXLINE [®]
CANCERLIT	TOXLIT
CHEMLINE [®]	TOXLIT65
DIRLINE [®]	MEDLINE BACKFILES
HEALTH	

Each of these databases has a unique INPUT form screen specially tailored to the type of information available in that database. For example, searching by CHEMICAL NAME is an option on the CHEMLINE form screen.

A discussion of each database and its unique search features is provided in a new section of the *User's Guide*. Helpful information is also available by pressing the HOME key in GRATEFUL MED at any point where questions arise.

SIMPLIFIED INSTALLATION

GRATEFUL MED, Version 3.0, incorporates simplified installation procedures.

HARD DISK SYSTEM:

Step 1.

Place the new Master Program disk in your drive A: and at a C> prompt enter:

a:hinstall <subdirectory name>

The subdirectory name is the subdirectory where you wish to load GRATEFUL MED, Version 3.0 (e.g., GM3). You do not need to create this new subdirectory -- GRATEFUL MED will do so automatically.

FLOPPY DISK SYSTEM:

Step 1.

Place the new master in A: and a formatted disk (with DOS) in B:. At the A> prompt enter:

finstall

NOTE: Once the installation is complete for either a hard disk or floppy disk system, you may want to copy your BLOGIN file from your copy of GRATEFUL MED, Version 2.0 -- it will work fine with Version 3.0 and will eliminate the need for you to run SETUP and input your code and phone numbers.

EDITING THE SEARCH STRATEGY

GRATEFUL MED, Version 3.0, allows one to 'edit' the search strategy once the search has been run. The searcher does not have to re-input the entire strategy - the INPUT form screen is simply redisplayed with all of the terms, exactly as they were input. This feature may be especially useful if a "typo" caused the search to fail, or if the searcher wishes to modify the strategy to broaden or narrow the search.

One may also take advantage of this edit capability to run the same search strategy in more than one database. GRATEFUL MED will ask if one wants to 'change databases' before the search is edited. If yes, the searcher will be prompted to select another database, and the data from the original INPUT form screen will be transferred to the INPUT form screen for the new database. Either make changes to the strategy, or simply run the same search unchanged.

SHORTCUTS

With GRATEFUL MED, Version 3.0, one will be able to bypass all of the initial screens of GRATEFUL MED. This capability allows the searcher to go directly from the DOS prompt to whatever the ACTION screen choice would be, e.g., go directly to the MEDLINE INPUT form screen. The format for this will be to enter at the DOS prompt: SEARCH/M. The various options for this feature are listed in the revised pages of the *User's Guide*.

AUTHOR SEARCHING

GRATEFUL MED allows one to enter an author's name in the format FIRST NAME (or initial) followed by the LAST NAME, just as it always has. It will still convert this to the proper search format online. However, the author's name will no longer be reformatted on the AUTHOR line of the GRATEFUL MED INPUT form screen. It will remain in the entered format until it actually does the search. Other new features are described in the *User's Guide* pages that accompany the new disks. Further discussions of the features of Version 3.0 will also be provided in the GRATEFUL MED column of upcoming *NLM Technical Bulletin* issues.

INTERIM STRATEGY FOR USE OF VERSION 2.0 WITH THE 1988 SYSTEM

It is possible that users will not receive Version 3.0 by the time the 1988 system comes up. This may cause some inconvenience for users who do Backfile searching. The Backfile configuration that will be in place as of December 14, 1987 incorporates a new Backfile known as BACK72 and eliminates BACK75 and BACK71. Version 2.0 of GRATEFUL MED will only know the "old" backfile configuration that includes BACK75 and BACK71. It will not "know" about BACK72.

NLM has attempted to get around this problem for users. First, the filename BACK75 will be an alias for the new BACK72 file and the filename BACK71 will be an alias for the BACK66 file. Therefore, when GRATEFUL MED, Version 2.0, gives the command for FILE BACK75, it will automatically access BACK72 and when it gives the command FILE BACK71, it will automatically access the BACK66 file. However, if one chooses to do a comprehensive backfile search, one will retrieve the data in BACK66 twice - once when GRATEFUL MED asks for BACK71 and once when it asks for BACK66. To avoid this, tell GRATEFUL MED to search only 14 years back. This will search all of the Backfiles, yet will not search BACK66 twice. Once Version 3.0 is obtained, this approach will no longer be necessary as it incorporates the new backfile configuration.

An alternative to searching only 14 years back is to download from the Source a new module for GRATEFUL MED. This module, RESEARCH.OVR "knows" the new Backfile configuration and can be used

with Version 2.0 of GRATEFUL MED. Follow the instructions below to do the special download.

HARD DISK SYSTEM:

1. Insert your Master Program disk in drive A:. Be sure you are at the C> in your GRATEFUL MED subdirectory. At the C> prompt enter the following series of commands:

```
a:arce a:meduts *.exe dwnld (CR)
```

```
rename research.ovr research.old (CR)
```

2. Call up GRATEFUL MED by entering 'search'. On any screen after the initial screen, press the ESC key to bring up the RESTART screen. Select option 6 to download the new module.

NOTE: GRATEFUL MED can only use TELENET for this procedure. Therefore, you must have TELENET as one of your SETUP choices. It does not have to be your "first" choice.

3. Once the download is successfully completed (this will take approximately 2 -3 minutes), enter the following command at the C> prompt:

```
a:arce research /r (CR)
```

This will "install" the new file on you hard disk. You will then be ready to run a Backfile search.

4. After you have run a successful Backfile search, you may want to delete the following files:

```
RESEARCH.ARC
RESEARCH.OLD
README
```

FLOPPY DISK SYSTEM:

1. Make a new operating copy of GRATEFUL MED as follows. Place your DOS disk in drive A: and the current operating copy of GRATEFUL MED in drive B:. At the A> prompt type:

```
diskcopy b: a: (CR)
```

The system will prompt you for a new "target" disk in drive A:. Remove DOS and place a blank, formatted disk in drive A:.

NOTE: DO NOT leave the DOS disk in drive A:. It will be overwritten!

2. Insert your Master Program Disk in drive A: and a blank, formatted disk in drive B:. At the B> prompt, enter the following series of commands:

```
copy/v a:arce.com b: (CR)
arce a:meduts *.exe dwnld (CR)
```

Remove the Master Program Disk from drive A:. Place your new operating copy of GRATEFUL MED (from Step 1) in drive A:.

3. Call up GRATEFUL MED by entering 'search' at the A> prompt. On any screen after the initial screen, press the ESC key to bring up the RESTART screen. Select option 6 to download the new module.

NOTE: GRATEFUL MED can only use TELENET for this procedure. Therefore, you must have TELENET as one of your SETUP choices. It does not have to be your "first" choice.

4. Once the download is successfully completed (this will take approximately 3 - 5 minutes), enter the following to complete the installation of the new module:

```
b:arce b:research /r (CR)
```

The disk in drive A: is now your "new" operating copy of GRATEFUL MED.

Monthly Search Hint:

The FILES Command

From time to time, searchers want the ability to see a complete list of the MEDLARS files searchable with the ELHILL software on the NLM computer while they are online. For example, a searcher may temporarily forget the exact name of TOXLIT's backfile or cannot immediately recall the names of the MEDLINE Backfiles. When this happens, use the FILES command. This command displays a list of the searchable databases on the MEDLARS system available under the ELHILL software. Do not confuse FILES with the FILE command. FILE is the command used, preceding the name of a database, to select a file.

In terms of charges for receiving this list, it is most cost-effective to access FILE INFORM first, before typing FILES. However, if the command is entered in MEDLINE or in files charged at the same rate as MEDLINE (i.e., most NLM databases), the charge should only be approximately \$23.50/hour during prime time and \$16.50/hour during non-prime time. Figure 1 contains an example of the FILES command.

The FILES command only shows MEDLARS databases available under the ELHILL software, not PDQ or MEDLEARN[®] which operates under different software. The TOXNET databanks (HSDB[®], CCRIS, etc.) are also not seen because they operate under different software on a different computer.

Remember to consider the use of the EXPLAIN command to receive a description of any ELHILL file. Access FILE INFORM first to be most cost-effective.

STORESEARCH NOW ONLINE

P. E. Pothier
MEDLARS Management Section, NLM

WHAT IS STORESEARCH?

STORESEARCH is a command used to construct a search strategy to be stored in the NLM mainframe computer so that it can be called up by its name and used again. This can eliminate re-typing of searches which the searcher plans to run against more than one MEDLARS database. It can, therefore, cut down on the time spent entering searches and the associated costs incurred if the same search is to be used to interrogate more than one database.

Until now, the major use of STORESEARCHes has been the storing of search strategies to be run as monthly current awareness queries against database updates as part of NLM's Automatic SDI program. (For details of the special conventions or rules which must be followed for STORESEARCH, see the NLM Online Services Reference Manual, 1986, Section 5.2.4.2 and 5.2.8. Note: This Manual is the comprehensive reference guide to the NLM databases and system command language.)

We expect that the new capability of running STORESEARCHes online, as opposed to only "offline" should greatly enhance their use.

HOW TO CREATE A STORESEARCH

When storing a search, first connect to the database on which the STORESEARCH is to be run, or at least to a similar file. Otherwise, the search strategy may not be compatible with the database against which the search may be run. For example, if MeSH headings are used, then any MeSH term which consists of more than one word will not retrieve records if the search is run against a "free-text" file. Moreover, if the search terms entered are qualified by element mnemonics (two- or three-letter symbols for database fields or elements), they may not be recognized by a "different" database. This is because, although the mnemonic may appear to be the same, it may be different in its actual internal coding in the NLM computer system. Mnemonics, for example, are (MH) for MeSH heading, (AU) for Author, (TW) for Text Word, etc.

To enter a STORESEARCH, begin by typing the command STORESEARCH. Later, end the process by typing FINISHED. The complete procedure is shown below with use of an example which has accompanying notes.

The searcher accesses the NLM system and, in this case, is connected to MEDLINE.

SS 1 /C?
 USER:
 storesearch

The searcher initiates the storing of the search by typing the command STORESEARCH followed by pressing the carriage return or ENTER key.

PROG:
 SEARCHNAME?
 USER:
 liver disease children
 PROG:
 ON-LINE OUTPUT:--NPS/PSTG/NONE?
 USER:
 pstg
 PROG:
 ENTER SEARCH

The program responds by asking for the user to name the search. Be sure to note the rules on naming searches in the Manual and later in this article.

STS SS 1 /C?
 exp liver disease or
 liver neoplasms

As in OFFSEARCH, answering NONE provides no computer checking and feedback; NPS will generate No Postings messages only when retrieval cannot be made on the search terms as entered against the file to which the user is currently connected; and PSTG causes the search actually to be performed as it is typed in.

PROG:
 SS (1) PSTG (13576)

The program now asks for the search strategy, and the searcher types in the search. Terms which create a multi-meaning message will be searched with the meaning selected by the user. If this occurs, the multi-meaning message will be repeated each time the search is executed online against a database.

STS SS 2 /C?
 USER:
 CHILD OR CHILD, PRESCHOOL
 PROG:
 SS (2) PSTG (56482)

STS SS 3 /C?
 USER:
 1 and 2 and not for (1a)
 PROG:
 SS (3) PSTG (984)

STRINGSEARCH should be avoided in STORESEARCH. Offline, it may encounter the 3000-citation limit, and online it may be very costly. All terms that are desired for retrieval must be gathered into the last search statement. This is the only search statement of the formulation that will be used to generate the final result. After the search has been entered, type FINISHED. The program will then ask if the formulation is correct. A response of Y causes the program to reply STORESEARCH COMPLETED and to store the search during the night. A response of N returns the

STS SS 4 /C?
 USER:
 finished
 PROG:
 OK? (Y/N/C/ADDRESS)
 USER:
 y
 PROG:
 STORESEARCH COMPLETED.

USER:

searcher to the *STS* SS number SS 4 /C? displayed immediately previous to the FINISHED instruction, and C cancels the entire search. (ADDRESS is an inappropriate query and response for STORESEARCH and should be ignored).

Typing in the search formulation does not by itself store the search. The search is stored by a batch processing program, run at night. Therefore, the search cannot actually be used until the next business day following the business day on which the formulation was stored (business day meaning Monday through Friday, exclusive of Federal government holidays). In other words, a search stored on Friday, for example, would be available for use on Monday; a search stored on Saturday or Sunday would not be available for use until Tuesday.

HOW TO NAME THE SEARCH

STORESEARCHes must be named in accordance with rather strict naming conventions. If these rules are not followed, the STORESEARCH may not run and/or it may be impossible to display or delete. These naming conventions apply to all STORESEARCHes: the additional naming conventions which must be followed when naming STORESEARCHes which are to be used as Automatic SDI searches are discussed in Section 5.2.4.2 of the Online Services Reference Manual, 1986.

Users are responsible for keeping a record of the names of their stored searches. A list of a user's stored searches can be requested from MEDLARS Management, but there is currently no way to request a list online.

Here are the rules for naming STORESEARCHes:

1. The names may be no more than 30 total characters in length, including spaces.
2. The 30th character of the name must not be a space.
3. The Searchname must contain at least one alphabetic character; it may not be all numeric.
4. Each STORESEARCH name must be different. If two STORESEARCHes are given the same name, neither can be run, displayed, or deleted. If a STORESEARCH is removed and reformulated, allow a night for the original search to be purged before re-entering another with the same name.
5. A Searchname should not contain any special characters such as hyphens, commas, parentheses, colons, semi-colons, periods, etc. Some of these will not cause the search to fail, but others will, and it is best to avoid them all. We suggest you restrict Searchnames to only alphabetic or alphanumeric characters.
6. A name must not contain a Boolean operator (AND or OR).

VIEWING OR DISPLAYING THE SEARCH

Since storing a search requires overnight NLM computer processing, the searcher should verify that it has actually been stored before assuming that it can be run. This can easily be done in the following manner. The day after a search has been stored (or the day after the next business day, if the search was stored on a Federal government holiday), the searcher should log in, using the same User ID code as was used when the search was stored, and DISPLAY the STORESEARCH.

SS 1 /C?

USER:

display liver disease children

Do not use the (SN) qualifier to DISPLAY to make sure that it has been stored properly. The (SN) is only used when requesting the search execution. If the search has not been properly stored, one of the following messages will be displayed:

STORED SEARCH 'LIVER DISEASE CHILDREN' DOES NOT NOW EXIST.

or

STORED SEARCH 'LIVER DISEASE CHILDREN' EITHER MISSING OR MULTIPLY DEFINED.

or

STORED SEARCH SPECIFIED CANNOT BE FOUND.

The most common causes of this failure are:

1. The search was improperly named and contains non-alphanumeric characters;
2. The Searchname contains a space in the 30th position;
3. Two searches have been stored with the same name;
4. The search was stored under a different User ID code from the one that has currently accessed MEDLARS.

Call the MEDLARS Management Section for assistance. Be sure to have accessed MEDLARS with the same User ID code used when the search was stored. Also, check to see if the search name was typed exactly as it was originally entered. We will try to help solve any problems. Be aware, though, that some misnamed searches cannot be executed, displayed, or deleted. However, there is no charge to the user for storage of searches.

The User ID code must be the same as the one used to log in when the search was stored because it is the link between the searcher and the stored searches. When naming stored searches, the program appends the User ID code to the Searchname. Thus if the User ID code is XYZ01 and the stored search name is LIVER DISEASE CHILDREN, the program actually records the searchname as:

LIVER DISEASE CHILDREN/MEDXYZ01

It is this invisible extension to the search name that makes it possible for STORESEARCHes to reside in the main memory of the computer and yet be accessible only to a user who accesses the system with the same User ID as the user who stored them.

USING STORED SEARCHES

Since STORESEARCHes can now be used online, where the amount and nature of the retrieval are known immediately, they can be used to accomplish many things which formerly had to be done either in OFFSEARCH or via SAVE or SAVESEARCH. STORESEARCHes reside in the main memory of the NLM computer so they are not subject to the 6,220-character limitation of the Unified User Specification File (UUSF) which contains SAVED searches. This means that STORESEARCHes can contain much more than SAVED searches and also that there is effectively no limit to the number of STORESEARCHes a user can have. SAVED searches, which can be saved, used immediately, and removed immediately remain the vehicle of choice for running short searches against several files. But STORESEARCH is now the method of choice for more lengthy searches which are needed regularly or frequently. For example:

1. Searches run at regular intervals to update data from files for which Automatic SDI service is not available, such as BIOETHICS or HISTLINE.
2. Hedges, that is, searches with terms that all deal with the same subject but which come from different categories of the MeSH tree structures. An "immunology" hedge, for example, might be constructed with terms for the immune system from Category A15; terms for immune system physiology taken from Category G4; terms for immunologic diseases from C20; terms for antigens and antibodies from D24; and terms for immunologic diagnosis, tests, and therapies from the E categories.
3. Searches for a special interest group, such as dentists, in which the STORESEARCH would contain dental headings from MeSH, the Special List indicator D, as well as the various Title Abbreviations for dental journals that are indexed for Index Medicus.
4. Searches used to store the Journal Title Codes (JC), ISSN (IS), or Title Abbreviations (TA) for the journals in the collection of a small or specialized library. By ANDing a search strategy with

the STORESEARCH, one can assure that all of the retrieved citations will be to articles that are available in one's own library:

```
SS 6 /C?  
USER:  
5 AND MYLIB (SN)
```

Two things should be noted when using STORESEARCH:

1. When the STORESEARCH is executed, whether online or using OFFSEARCH, the searchname must be qualified by (SN). The qualifier is not used when the search is named, input, displayed, or purged; but it must be used to run the search.
2. STORESEARCHes differ from ordinary line-by-line, searches in one very important respect: the final search statement must be a summary of the entire strategy. This means that all concepts for which retrieval is desired must be logically pulled together in the last search statement.

This last condition is responsible for most of the problems encountered in running stored searches.

LIMITS AND RESTRICTIONS ON THE USE OF STORESEARCH

STORESEARCH is a very powerful and useful procedure; however, it is subject to certain NLM computer program restrictions.

1. Because STORESEARCHes reside in the main memory of the computer, the user cannot list out the names of stored searches; this list should be requested from MEDLARS Management. Write or call with the User ID code.
2. STORESEARCHes cannot be shared online with other users. In other words, user A cannot log in and use another searchers search because STORESEARCHes can only be run from the User ID code with which they were stored.
3. STORESEARCHes cannot be edited. Whenever the user wishes to add or delete terms (such as at the beginning of each MeSH year) or change the searchname, the whole STORESEARCH must be deleted, reformulated, and re-entered.
4. STORESEARCHes cannot be used the same day they are entered because the search is not stored immediately, but instead during the night or the night of the next business day after the system has been brought down. Deleting a search also requires overnight processing so an updated STORESEARCH cannot be entered the same day as a superseded one is deleted, unless it is given a different name.
5. Use of the RESTACK (RSTK or KEEP) command is not permitted in

STORESEARCH. If a user attempts to RESTACK while inputting the search, the following message will appear.

RESTACKING NOT PERMITTED WHILE STORING SEARCHES

6. If the STORESEARCH is to be run online, the number of terms generated by a truncation or explosion may not exceed the online limit of 450 terms, rather than the OFFSEARCH limit of 2,250. In an ordinary online search this limit applies to each search statement, so if one stays within the limit for each search statement, the search will run. But because in STORESEARCH the operational search statement is the last one, in which all of the logic is brought together, the search will work as it is input (with PSTG option on), but it will fail on subsequent attempts to execute it. A STORESEARCH containing several large explosions or "root" truncations, such as ALL TOXIC:, will almost certainly fail online. The user will receive the message:

GENTRM OVFLW

7. Similarly, since the intermediate result of the comparison of two terms of lists in a single search statement may not exceed 208,000 records, the occurrence of more than one large comparison list will cause the search to fail in execution. The message received will be:

PROC PSTG OVFLW

8. STRINGSEARCHing and ranging should be avoided in STORESEARCH because they are the most time-consuming of all online search procedures and therefore the most expensive.

DELETING A STORESEARCH

To remove a stored search from the computer, use the command PURGESEARCH.

```
USER:
purgesearch liver disease children
PROG:
OK? (Y/N/C/ADDRESS)
USER:
```

```
y
PROG:
```

PURGESEARCH COMPLETED

Note: Do not use the (SN) qualifier when purging a STORESEARCH.

The search will be purged during night processing that evening or on the night of the next business day. The searcher should attempt to DISPLAY the search the next day to make sure it has been purged.

```
USER:
display liver disease children
PROG:
STORED SEARCH 'LIVER DISEASE CHILDREN' DOES NOT NOW EXIST.
```

Do not store a new search with the same name as a purged search. Wait overnight and verify that the "old" STORESEARCH has indeed been purged before storing a search with an old, identical SEARCHNAME.

If a stored search has a space in the 30th position of its name, it cannot be run or displayed, but it can usually be purged by adding one or more characters in position 31 and beyond. For instance, to purge a stored search named TOXIC SILVER SULPHIDE CONTACT DERMATITIS which has a space in position 30, enter:

```
purgesearch toxic silver sulphide contact xyz
```

If a stored search was mistakenly given a name which contains a Boolean operator (AND or OR), it can only be purged by first using the RENAME command to RENAME the Boolean operator:

```
SS 2 /C?
USER:
RENAME AND TO +
PROG:
"AND" HAS NOW BEEN RENAMED TO "+".
```

```
SS 2 /C?
USER:
purgesearch asthma and bronchitis
```

Do not attempt to purge a search by truncating the search name with a colon; it will not work.

If an error has been made while inputting a STORESEARCH, i.e., before the message STORESEARCH COMPLETED, abort it by issuing the command STORESEARCH CANCEL after any user cue.

FINAL WORD

STORESEARCH is a sophisticated and powerful search tool; however, because of many rules and involved procedures it is a fairly complex process. If assistance is needed with this procedure, please do not hesitate to contact the MEDLARS Management Section.

Searching RTECS®

on TOXNET®

Philip Wexler
Jeanne Goshorn

Specialized Information Services Division, NLM

RTECS (Registry of Toxic Effects of Chemical Substances) became publicly available on the TOXNET system on December 7, 1987. An article describing RTECS's history and content appeared in the September 1987 issue of the *NLM Technical Bulletin*. The file is built and maintained by the National Institute for Occupational Safety and Health (NIOSH). This present article gives some practical examples of searching RTECS on TOXNET. Refer to Figure 1 for a display of the RTECS Unit Record.

Structurally, RTECS is similar to TOXNET's CCRIS file. It contains a relatively small (compared to HSDB®) number of data fields, is arranged by chemical, devotes considerable space to summarizing test results, and utilizes data tabs as a way to organize the information contained in the study fields. RTECS has by far the greatest number of chemical records (91,000) of any TOXNET file.

Technical Notes

Whenever applicable, the heading of each Technical Note includes a reference to the section of the Online Services Reference Manual 1986 that is considered most relevant to the item being discussed, e.g., (Manual 4.7.2). Users should keep in mind that the item may pertain to other sections of the Manual as well.

MARTIN LUTHER KING'S BIRTHDAY HOLIDAY SCHEDULE

The NLM computer will be operational on a guaranteed basis on Monday, January 18, 1988, the day of the Federal government observance of Dr. Martin Luther King's birthday. Online charges will be at non-prime rates all day and the MEDLARS® Management Service Desk will not be staffed. On Martin Luther King's actual birthday, Friday, January 15, 1988, the NLM computer will also be operational and the MEDLARS Management Service Desk will be staffed. Regular online charging rates will be in effect all day. Please see the October 1987 *NLM Technical Bulletin*, Appendix C, for the complete 1988 holiday schedule.

CANCERLIT® YEAR-END PROCESSING

Year-end processing of the CANCERLIT file has been delayed. Watch the online news for further details.

TOXNET OFFLINE PRINTS

Offline print requests entered for the Hazardous Substances Data Bank, the Chemical Carcinogenesis Research Information System, or Registry of Toxic Effects of Chemical Substances on the TOXNET system may now be cancelled. Each offline print is now assigned a unique taskname beginning with the letter T. This taskname appears on the top righthand corner of the first page of the printout. To request cancellation of a TOXNET offline print, call the MEDLARS Management Section at (800) 638-8480 or (301) 496-6193 from 8:30 a.m.- 5:00 p.m. ET, M-F excluding Federal government holidays and request cancellation of the TOXNET offline print by taskname. Requests for cancellation must be made on the same day the search

was entered. Cancellations cannot be requested on weekends.

TOXBIB ENTRY MONTH CHANGES

TOXBIB records in the 1988 TOXLINE® file, made public on December 17, contain the original MEDLINE® Entry Month (EM), rather than the single entry month used for the previous file rebuild. Users are cautioned that some other parts of the TOXLINE database still have single entry months for the entire component, and thus the Entry Month field is not recommended for limiting searches other than the performance of regular monthly update searches following a TOXLINE update. Users are also reminded that special instructions were given for running November 1987 monthly update searches with the elimination of TOXBIB records (include "and not TOXBIB (SI)"). Both November and December TOXBIB records will be retrieved with update searches run after the December TOXLINE update (EM) 8712. This is because the TOXLINE rebuilding process resulted in two months of TOXBIB records having the 8712 EM. (None of these special instructions were necessary for TOXLINE Automatic SDI's; they pertain only to users running their own recurring TOXLINE searches.)

ADDITION OF NUMBER OF REFERENCES (RF) FIELD TO PRINT FORMATS

The Number of References (RF) field has been added to all MEDLINE and HEALTH standard print formats for the 1988 system. Remember, Number of References are only included with citations to articles indexed with the check tag REVIEW. The RF field prints before the Source (SO) field. An example follows:

Online Printout:

RF - REVIEW ARTICLE: 88 REFS.

Offline Printout:

RF - 88

Explanatory text has been added to the RF field for online printouts only. For offline printouts, the RF field is printed exactly the way the data are stored in the record, i.e., the number only with no explanatory text.

SYSTEM MESSAGE CHANGES

Two system messages have been changed as part of the new software enhancements announced in the November *NLM Technical Bulletin*. These are outlined briefly below.

1. The NBR message has changed to accommodate the new software enhancements. The new message follows:

```

SELECT #   POSTINGS   TERM
  1         3     EYDOUX P (AU)
  2         1     EYDT JN (AU)
  3        1028     EYE (MH)
  4        3670     EYE (TW)
  5         10     EYE (NF)
UP N OR DOWN N OR ENTER A SELECT
COMMAND.
    
```

Previously this message read as:

```
UP N OR DOWN N?
```

2. One of the options offered in the computer Multi-Meaning message resulting from an EXPLODE is now processed differently. If NONE is chosen in response to the Multi-Meaning, a No Postings (NP) message will display:

```

SS 1 /C?
USER:
exp eye

PROG:
MM (EYE) (2)
      1 A1.456.505.420
      2 A9.371
NUMBER, NONE, OR EXPAND-

USER:
none

PROG:
NP (EYE.: (MN))
    
```

The computer now processes the NONE option as a No Postings (NP) answer, recognizing the searcher's desire to exit from the EXPLODE search without further processing. In this example, there are postings to the MeSH Heading EYE in the database, but the searcher has requested NONE. The NP result replaces previous programming that used to go ahead and process Tree #1 in the Multi-Meaning message when NONE was the searcher's choice.

PRINTING DELAY ON NLM CATALOGS

NLM has been informed by the U. S. Government Printing Office (GPO) of delays in printing the July - September, 1987 quarterly issues of the *NLM Current Catalog* and the *NLM Audiovisuals Catalog*. These issues will be delayed until January at the earliest. *Index Medicus*TM and other publications are not affected by this delay.

CLINPROT[®] INDEX TERM LISTING

The CLINPROT Index Term listing for December 1987 is now available. It may be requested by writing to the MEDLARS Management Section. Please include a self-addressed label with your request. No return postage is necessary.

Please access FILE INFORM and type NEWS to see the most recent news items online!

Searching RTECS
Continued from page 1.

Remember that data tabs (e.g., ROUTE, SPECIES, etc.) are generally not searchable as specific fields but simply organize data within fields. Searching may be qualified by data field or category, including individual terms in the reference. Searching for terms in the reference may be a useful way to track down an obscure

article but users should also be aware of false drops that may result when they are searching data fields for a search term that happens to be part of a journal or book title.

The various print options available in the TOXNET system apply to RETCS as well. Three search questions are found in Figures 2-4. Each contains a brief discussion and sample interaction.

RTECS Unit Record	
0.	** ADMINISTRATIVE INFORMATION

Figure 1

1. Are there any standards for exposure to copper fumes?

Discussion: This is a fairly straightforward search for information on a known chemical. First, the single record for copper is retrieved and then the Standards and Regulations (SREG) field is printed. This particular standard is set by the Mine Safety and Health Administration (MSHA). Since there was only one occurrence of SREG for this chemical, it is easy to spot the required information. If the search was for a chemical with potentially many regulations, a more precise approach would be to AND the first search statement for the chemical with another search statement like - (sreg) all fume:

```
SS 1 /C?
USER:
copper (name)
SEARCH IN PROGRESS...
SS (1) PSTG (1)
```

```
SS 2 /C?
USER:
prt sreg
```

```
RTN - 27533
NAME - COPPER
RN - 7440-50-8
SREG - MSHA STANDARD-air:TWA 0.1 mg/m3 (fume,dusts &
mists); DTLVS* 3,59,71; Doc Threshold Limit Values
```

Figure 2

2. What are some disodium salts that have been tested in DNA Repair assays?

Discussion: Name fragment searching is a powerful tool for locating classes of chemicals. DNA Repair is one of a number of assay systems tracked by NIOSH for mutation data.

SS 1 /C?

USER:

same (nf) disodium and salt
 SEARCH IN PROGRESS...
 438 OCCURRENCES IN 260 RECORDS

PDQ ACCESS - New

PC Search Software

Jim Carter

Database Manager, ICRDB, NCI

PDQ ACCESS, a new telecommunications software package designed by the National Cancer Institute (NCI) for use with the PDQ® database on MEDLARS, is now available for purchase from the National Technical Information Service (NTIS). It is intended to make searching PDQ even easier for both physicians and librarians. Also, new search capabilities have been added. PDQ ACCESS automatically connects from any IBM PC, Compaq or IBM-compatible computer to PDQ through ordinary telephone lines; displays PDQ information from a search on the computer screen; and records this information while online to a file on either the PC's hard or floppy disk. It disconnects from PDQ and then allows the searcher to display the information again on the computer screen or to print the information on a printer, while they are not connected to the MEDLARS system.

PDQ ACCESS also allows automated searching of CANCERLIT with predefined search strategies stored and updated by NCI in PDQ. Currently there are more than 200 stored searches which can be used by searchers to retrieve references from CANCERLIT on many cancer treatments.

Once a diagnosis is chosen in the PDQ Cancer Information File, the searcher can choose a continuation option menu that includes "retrieve CANCERLIT searches." A menu lists all available search strategies for the diagnosis chosen. For example, the diagnosis "breast cancer" currently has search strategies for the treatment of six different types/stages of breast cancer. If the searcher chooses the search strategy for

"adjuvant chemotherapy of postmenopausal breast cancer," the selected search is displayed on the screen as follows (and is simultaneously captured by PDQ ACCESS). Figure 1 below shows this complete CANCERLIT search, formatted for ELHILL® command language searching.

After the statements have been captured, pressing the F8 key begins an automatic process of logging off PDQ, logging into CANCERLIT, and capturing a retrieval using the chosen search strategy. As the searcher is printing retrieval, the system will offer the option to change the print format and continue printing, or return to PDQ.

HARDWARE/SOFTWARE REQUIREMENTS

The PDQ ACCESS software program was designed for PDQ users who are unfamiliar with ELHILL searching and desire the convenience of automated system access and file capture. It will work on IBM personal computers and Compaq personal computers that have a minimum of 256K RAM and at least one 360K disk drive using DOS Version 2.0 or higher. Microcomputers which are compatible with the IBM personal computers and run PC-DOS (or MS-DOS) Version 2.0 or higher, should run PDQ ACCESS without problems. A Hayes Smartmodem or Hayes-compatible modem which can run Hayes Smartcom II software is also required.

For more information about PDQ ACCESS, please call the PDQ Service Desk at (301) 496-7403 or write: PDQ, National Cancer Institute, Bldg. 82, Room PA1, Bethesda, MD 20892. PDQ ACCESS may be purchased from NTIS at \$19.95 per copy plus \$3.00 shipping charge for each total order. The order number for PDQ ACCESS is PB88-103692. (NOTE: Users who connect to NLM through toll-free WATS numbers rather than local TELENET or TYMNET numbers should contact the PDQ Service Desk before ordering PDQ ACCESS.)

```

Figure 1

VERSION 2.0

[Editor's note: This month's column will be devoted to introducing Version 3.0.]

The new and improved GRATEFUL MED Version 3.0 is being sent at no charge to everyone who purchased Versions 1.0 or 2.0 from the National Technical Information Service (NTIS). If you have moved since you made your original order you should notify NTIS of your new address, even if you have notified the National Library of Medicine of your address change. If you are working in a large institution such as a university or hospital, it is also advisable to check with NTIS to make sure they have your complete address (room number, department, etc.). The telephone number for NTIS is (703) 487-4650.

The big news about Version 3.0 is the addition of new INPUT screens. There is now a user-friendly interface to seven additional MEDLARS databases:

AVLINE® - Citations for audiovisuals designed for health professionals. Videocassettes, motion pictures, and computer software is included.

CANCERLIT - Citations to published literature covering all aspects of cancer from 1976 forward.

CHEMLINE® - A dictionary file of unique chemical substances identified primarily from MEDLARS databases. Registry numbers and synonyms are provided.

DIRLINE® - A directory file of reference centers, associations and groups willing to provide information suitable for the general public.

HEALTH - Citations dealing with the non-clinical aspects of health care delivery.

TOXLINE - Citations to toxicological information from non-royalty sources.

TOXLIT/TOXLIT65 - Citations to toxicological information from royalty sources.

These databases (except CHEMLINE and TOXLIT) are charged at the same basic MEDLINE rates, approximately \$24/hour prime, \$17/hour non-prime. CHEMLINE charges are approximately \$94/hour prime, \$87/hour non-prime. TOXLIT charges are approximately \$133/hour prime, \$126/hour non-prime. (Prime time is Mon.- Fri. 10 a.m. to 5 p.m. ET. Non-prime time is all other times and Federal holidays.)

We will discuss these new databases in more detail in future columns. Please let us know if you have specific questions.

The second most notable aspect about Version 3.0 is that you can make changes on your INPUT screen even after the search has been run. Let's say your search found nothing and you want to try again but this time leave out some terms in order to broaden the retrieval. Rather than re-input the terms you want to retain, you can simply edit the last screen. You can even make changes and run the modified search in another database.

Version 3.0 also includes a number of other improvements:

- The installation procedure is simplified.
- A completely new *User's Guide* is provided.
- The HELP screens (available via the HOME key) have been revised.
- You can go directly from the DOS prompt of your GRATEFUL MED subdirectory to the INPUT screen of your choice. For example:

SEARCH/M

will take you directly to the MEDLINE INPUT screen.

- 1988 MeSH® vocabulary. Each year NLM modifies the MeSH vocabulary, so you may notice some new terms when browsing through the "F10" display.
- You can search an older range of years by selecting a particular MEDLINE backfile, or, search all the MEDLINE backfiles and just bypass the MEDLINE "front file."
- Names entered on the AUTHOR line will not be reformatted; therefore, you can make changes more easily before you go on to search.

- You can specify from the DOS prompt of your subdirectory that you want the results of your search to be written to a file named by you.

Please read the *User's Guide* that comes with Version 3.0 for complete explanations of these features and watch this column for more details.

GRATEFUL MED users should also note the following articles and/or features in this issue:

TECHNICAL NOTES, p. 3.

CLINPROT Terminology

Changes

David J. Perry, M.D.

International Cancer Research Data Bank Branch, International Cancer Information Center, National Cancer Institute

In February 1988, a number of subject captions currently used for CLINPROT indexing will be deleted. These are listed below. All the terms indented under these terms will also be deleted.

<u>CODES</u>	<u>CAPTIONS</u>
0780.21	Therapy Modality Combinations
0780.23	Therapy Schedules
0780.25	Remission Studies
0780.31	Stratification Parameters
0780.33	Chemotherapeutic Agents

0780.35 Route of Drug Administration
 In the paragraphs below, a brief description of each caption family is provided along with the reasons for deleting the terms. There are also suggestions on how to more effectively search CLINPROT without these terms.

Therapy Modality Combinations

The subject captions indented under "Therapy Modality Combinations" are terms such as: "Chemo/surg/BMT." This term retrieves studies using three different modalities: Chemotherapy, surgery, and bone marrow transplantation. CLINPROT users may follow the suggested strategy found in Figure 1 for the same retrieval.

SS 1 /C? USER: chemotherapy SS (1) PSTG (XX)	SS 3 /C? USER: autologous bone marrow therapy or allogeneic bone marrow therapy or syngeneic bone marrow therapy SS (3) PSTG (XX)
SS 2 /C? USER: surgery SS (2) PSTG (XX)	SS 4 /C? USER: 1 and 2 and 3

Figure 1

Therapy Schedules

Captions under "Therapy Schedules" are represented by terms like "Intermittent Therapy." In use, this type of term is not very helpful. Users can more effectively retrieve studies by using the drug and disease terms and scanning the protocol details for the therapy schedules.

Remission Studies

"Remission Studies" has indented terms like "Intensification" and "Continuation." Again, these terms are not very useful apart from a specific disease and mode of therapy.

Stratification Parameters

"Stratification Parameters" contains a number of terms such as "Bone marrow status" and "Renal function." Most CLINPROT users are not as interested in the parameters used to stratify patients (roughly, to adjust randomization in order to analyze subgroups of patients) as they are in the criteria allowing patients to enter a study. Additional terms allowing CLINPROT users to retrieve studies by entry criteria are being developed.

Chemotherapeutic Agent

The subject captions under "Chemotherapeutic Agent" are terms like "Chemotherapeutic Agents, nineteen." This information is of no practical value. Retrieval by individual drugs rather than the number of drugs provides useful information.

Route of Drug Administration

"Route of Drug Administration" lists terms like "Drug Administration, Intrathecal." This information is potentially useful, but because most chemotherapy protocols use multiple agents, the route of administration subject caption may apply to any of several drugs in a given study. Retrieval by drug and review of the protocol details on drug dose and route of administration is recommended.

Monthly Search Hint:

A New Way to Search for the General Aspect of a Topic

Jane Rosov
MEDLARS Management Section, NLM

As announced and briefly described in the November 1987 *NLM Technical Bulletin*, there are several new enhancements to the ELHILL software. This Monthly Search Hint first provides some additional background concerning these new features and then shows how to use the features easily to search for records that represent articles discussing the general aspects of a topic, i.e., no particular subheading is starred to indicate the slant of the article for *Index Medicus*. These general articles are sometimes referred to as "up front" articles because in *Index Medicus* they appear at the beginning of the section providing citations for a MeSH heading. This technique may be used in any database that uses the MeSH vocabulary. It supercedes the technique presented in the April 1985 *NLM Technical Bulletin*.

BACKGROUND

One of the new software features was a modification to the list of search terms generated as the result of NEIGHBOR (NBR) or NEIGHBORDETAILED (NBRDET) commands. This list of terms is known as the SELECT LIST. Now, in addition to displaying the alphabetical list of search terms with their corresponding postings, a number identifying each term is displayed to the left of each term. This number, known as the SELECT NUMBER, may be used with the new command SELECT (abbreviated SEL) to search for the desired term(s) as an alternative to keying the actual term(s) to be searched. A search statement using SELECT may be entered directly in response to the UP N OR DOWN N OR ENTER A SELECT NUMBER system prompt or at any other time a search statement may be entered. The SELECT LIST of search terms (NOT the postings) remains active from database to database until the searcher logs off or erases the

list with a PURGESELECT command. The SELECT LIST holds up to 140 terms. Terms are added with each NEIGHBOR command issued. When the list fills, the oldest terms are deleted first and are replaced with the terms from the newest NBR display. More details concerning the SELECT command will be given in future *NLM Technical Bulletin* articles, particularly the forthcoming special issue designed to help update users on any database changes, new vocabulary, etc.

Please refer to page 7 of the November 1987 *NLM Technical Bulletin* for some examples of the use of the SELECT command.

SEARCHING FOR THE GENERAL ASPECT OF A TOPIC

Outlined below, with an accompanying example in Figure 1, are the easy steps needed to retrieve general articles on a topic.

1. Type the NBRDET command followed by the MeSH heading to see the subheadings that currently exist in combination with the term. All the combinations will list out first, followed by those with an asterisk. The asterisk indicates the MeSH heading/subheading combinations that represent the main point of an article.
2. Use the command SEL with the appropriate SELECT NUMBER to search for all records with the asterisked MeSH heading. This retrieval includes records with asterisked subheadings attached to the MeSH heading, and also may include records without asterisked subheadings attached to the asterisked MeSH heading itself.
3. Use the SEL command with the appropriate range of SELECT NUMBERS to gather all records which do have the asterisked MeSH heading/subheading combinations.
4. This "subheading inclusive" retrieval is then excluded (NOTed out) from the original comprehensive retrieval. What remains are records which have no asterisked subheadings attached to the MeSH heading.
5. To search MEDLINE's Backfiles, it is best to enter a new NBRDET command in each database and duplicate the steps outlined in Figure 1. The MeSH heading/subheading combinations may differ.

Serials Update

INDEXED TITLES UPDATE, DECEMBER 1987

The following titles cited in MEDLINE, HEALTH, and POPLINE have recently been selected for indexing, undergone a title change, or ceased publication. This list is not cumulative; the information provided is only for titles whose status has changed since the

last UPDATE. More detailed information may be found in SERLINE. For further information, please contact MMS or Ms. Esther Baldinger, (301) 496-1276, Technical Services Division, NLM.

December 21, 1987

Dear Domestic MEDLARS User

This is to notify you that on January 1, 1988, the pricing structure of CHEMLINE and the TOXLIT files (TOXLIT and TOXLIT65) will be modified in response to increases in the 1988 royalty rates charged by Chemical Abstracts Service (CAS), and BioSciences Information Service (BIOSIS), the suppliers of proprietary data for these files.

To reflect these changes, the NLM Online Pricing Algorithm has been updated in the Connect Charge, Search Statement Charge, and Citation Charge components. Based on past experience, we estimate that the approximate average hourly rate in Prime Time for CHEMLINE will be \$94, and that for TOXLIT and TOXLIT65 will be \$133. An individual's actual hourly rate will vary, of course, based on total resources used.

This year CAS has instituted new license agreements that require measuring and reporting of new parameters for online use. Negotiations about these requirements have only recently been completed, allowing little time for notification of users before the start up of the new license. Some of these changes are reflected in the updated NLM Online Pricing Algorithm.

Please see Table I on the reverse side of this letter for the new NLM rates for the six components of the online algorithm. Additionally, note that offline page charges have been increased due to royalty charges. NLM has not increased any of its component charges for these files. The NLM portion of the total price reflect the rate established for the October 1, 1987 MEDLARS Pricing Structure. For your information, Table II gives a further breakdown of changes in royalties by supplier of information.

Sincerely yours,

Lois Ann Colaianni
Associate Director
Library Operations

Henry M. Kissman, Ph.D.
Associate Director
Specialized Information Services.
